

TS3A5223 0.45 Ω 2-Channel SPDT Bidirectional Analog Switch

1 Features

- Low ON Resistance Switches
 - 0.45 Ω (Typical) at 3.6 V
 - 0.85 Ω (Typical) at 1.8 V
- Wide Supply Range: 1.65 V to 3.6 V
- 1.0 V Compatible Logic Interface
- High Switch Bandwidth 80 MHz
- 0.01% THD Across Entire Band
- Specified min Break-before-make
- Bi-directional Switching
- –75 dB Channel-to-Channel Crosstalk
- –70 dB Channel-to-Channel OFF Isolation of Very Low Power Dissipation and Leakage Currents
- Very Small QFN-10 Package: 1.8 mm x 1.4 mm
- ESD Protection on all Pins
 - 2 kV HBM, 500 V CDM

2 Applications

- Portable Electronics
- Smartphones, Tablets
- Home Electronics
- Wireline Communication

3 Description

The TS3A5223 is a high-speed 2-channel analog switch with break-before-make and bi-directional signal switching capability. The TS3A5223 can be used as a dual 2:1 multiplexer or a 1:2 dual demultiplexer.

The TS3A5223 offers very low ON resistance, very low THD, channel-to-channel crosstalk and very high OFF isolation. These features make TS3A5223 suitable for application in Audio signal routing and switching applications.

The TS3A5223 control logic supports 1 V – 3.6 V CMOS logic levels. The logic interface allows direct interface with a wide range of CPUs and microcontrollers without increasing the current drawn from supply (I_{CC}) and thus lowering power consumption.

5 Pin Configuration and Functions

**RSW Package
10 Pin UQFN
Top View**

Pin Functions

NAME	PIN NUMBER	DESCRIPTION
VCC	1	Positive supply Input – Connect 1.65 V to 3.6 V supply voltage
NC1	5	Signal path Input/Output signal pins
NO1	2	
NC2	7	
NO2	10	
COM1, COM2	3, 9	Common signal path Input/Output signal pins
GND	6	Ground reference pin
SEL1, SEL2	4, 8	Select digital logic pin. Logic low connects COM to NC, Logic high connects COM to NO

6 Specifications

6.1 Absolute Maximum Ratings⁽¹⁾

 Specified at $T_A = -40^{\circ}\text{C}$ to 85°C unless otherwise noted.

		VALUE		UNIT
		MIN	MAX	
V _{CC}	Positive DC supply voltage	-0.3	4.3 ⁽²⁾	V
V _{COM} V _{NO} V _{NC}	Analog voltage	-0.3	4.3 ⁽²⁾	V
I _{COM} I _{NO} I _{NC}	On-state switch continuous current		±300	mA
I _{COM} I _{NO} I _{NC}	On-state switch peak current (1ms pulse at 10% duty cycle)		±500	mA
P _D	Total device power dissipation at T _A = 85°C	10-μQFN RSW	430	mW
T _A	Operating free-air ambient temperature range	-40	85	°C
T _J	Junction temperature range	-55	150	°C
T _{stg}	Storage temperature range	-55	150	°C

- (1) Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Not rated for continuous operation, 0.5% duty cycle at 1 kHz recommended

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Positive DC supply voltage	1.65	3.6	V
V _{COM} , V _{NO} , V _{NC}	Analog voltage range	0	V _{CC}	V
V _{SEL1} V _{SEL2}	Digital logic voltage	0	V _{CC}	V
T _A	Operating free-air ambient temperature range	-40	85	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TS3A5223	UNIT
		RSW (UQFN)	
		10 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	92.5	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	46.0	°C/W
R _{θJB}	Junction-to-board thermal resistance	44.5	°C/W
ψ _{JT}	Junction-to-top characterization parameter	1.5	°C/W
ψ _{JB}	Junction-to-board characterization parameter	44.5	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	31.2	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

Specified over the recommended junction temperature range $T_A = T_J = -40^{\circ}\text{C}$ to 85°C . Typical values are at $T_A = T_J = 25^{\circ}\text{C}$ (unless otherwise noted).

PARAMETER		V_{CC} (V)	TEST CONDITIONS	MIN	TYP	MAX	UNIT
DC CHARACTERISTICS							
V_{IH}	High-level Input voltage SEL1, SEL2 inputs	3.6		0.8			V
		2.3		0.8			
		1.8		0.8			
V_{IL}	Low-level Input voltage SEL1, SEL2 inputs	3.6				0.3	V
		2.3				0.3	
		1.8				0.3	
R_{ON}	Switch ON Resistance	3.6	$V_S = 0$ to V_{CC} , $I_S = 100$ mA, $V_{SEL} = 1$ V, 0 V		0.45	0.6	Ω
		2.3			0.6	0.8	
		1.8			0.85	1.2	
ΔR_{ON}	Difference of on-state resistance between switches	3.6	$V_S = 2$ V, 0.8 V, $I_S = 100$ mA, $V_{SEL} = 1$ V, 0 V		0.05		Ω
$R_{ON-FLAT}$	ON resistance flatness	3.6	$V_S = 0$ to V_{CC} , $I_S = 100$ mA, $V_{SEL} = 1$ V, 0 V		0.1	0.2	Ω
		2.3			0.15	0.35	
		1.8			0.4	0.65	
I_{OFF}	NC, NO pin leakage current when switch is off	3.6	$V_S = 0.3$ or 3.0 V, $V_{COM} = 3$ or 0.3 V		5	90	nA
$I_{S(ON)}$	NC, NO pin leakage current when switch is on	3.6	$V_S = 0.3$ or 3.0 V, $V_{COM} = \text{No Load}$		4	60	nA
I_{SEL}	Select pin input leakage current	V_S	$V_S = 0$ or 3.6 V			100	nA
I_{CC}	Quiescent supply current	3.6	$V_{SEL} = 0$ or V_{CC}		700	2000	nA
I_{CCLV}	Supply current change	3.6	$V_{SEL} = 1$ V to $V_{SEL} = V_{CC}$			200	nA
SWITCHING PARAMETERS⁽¹⁾⁽²⁾							
t_{PHL}	Logic high to low propagation delay	3.6	$R_L = 50$ Ω , $C_L = 35$ pF		0.1		ns
		2.5			0.2		
		1.8			0.2		
t_{PLH}	Logic low to high propagation delay	3.6	$R_L = 50$ Ω , $C_L = 35$ pF		0.1		ns
		2.5			0.2		
		1.8			0.2		
t_{ON}	Turn-ON time	2.3 - 3.6	$R_L = 50$ Ω , $C_L = 35$ pF, $V_S = 1.5$ V			70	ns
t_{OFF}	Turn-OFF time	2.3 - 3.6	$R_L = 50$ Ω , $C_L = 35$ pF, $V_S = 1.5$ V			75	ns
t_{BBM}	Break-before-make time delay	3.6	$R_L = 50$ Ω , $C_L = 35$ pF, $V_S = 1.5$ V	2	8		ns
Q_{INJ}	Charge Injection	3.6	$C_L = 1$ nF, $V_S = 0$ V		40		pC
AC CHARACTERISTICS							
BW	-3 dB Bandwidth	1.65 - 3.6	$R_L = 50$ Ω , $C_L = 35$ pF		80		MHz
V_{ISO}	Channel OFF isolation	1.65 - 3.6	$V_S = 1$ Vrms, $f = 100$ kHz		-70		dB
V_{Xtalk}	Channel-to-Channel Crosstalk	1.65 - 3.6	$V_S = 1$ Vrms, $f = 100$ kHz		-75		dB
THD	Total harmonic distortion	1.65 - 3.6	$R_L = 600$ Ω , $V_{SEL} = 2$ Vpk-pk, $f = 20$ Hz to 20 kHz		0.01%		
C_{SEL}	Select pin input capacitance	3.3	$f = 1$ MHz		3		pF
C_{ON}	NC, NO, and COM input capacitance when switch is on	3.3	$f = 1$ MHz		115		pF
C_{OFF}	NC, NO, and COM input capacitance when switch is off	3.3	$f = 1$ MHz		50		pF

- (1) Rise and Fall propagation delays, t_{PHL} and t_{PLH} , are measured between 50% values of the input and the corresponding output signal amplitude transition.
- (2) Specified by characterization only. Validated during qualification. Not measured in production testing.

8 Detailed Description

8.1 Overview

The TS3A5223 is a bidirectional, 2-channel, single-pole double-throw (2:1 SPDT) analog switch that is designed to operate from 1.65 V to 3.6 V. This switch solution comes in a small 1.4mm x 1.8 mm QFN package while maintaining excellent signal integrity, which makes the TS3A5223 suitable for a wide range of applications in personal electronics, portable instrumentation, and test and home electronics. The device maintains the signal integrity by its low ON-state resistance, excellent ON-state resistance matching, and total harmonic distortion (THD) performance. To prevent signal distortion during the transferring of a signal from one channel to another, the TS3A5223 device also has a specified break-before-make feature.

8.2 Functional Block Diagram

Copyright © 2017, Texas Instruments Incorporated

8.3 Feature Description

8.3.1 Digital Logic Translation

The TS3A5223 devices supports down to 1-V logic signals irrespective of the supply voltage. The device accomplishes this with integrated level shifters on the digital input SEL1 and SEL2 pins.

8.3.2 Break-Before-Make

The TS3A5223 devices prevents signal distortions when switching signals between the NO and NC pins by completely turning off one signal path before turning on the other signal path. The break-before-make timing specifications are found in the [Electrical Characteristics](#) table.

8.4 Device Functional Modes

Logic low voltage on SEL1 or SEL2 pins connect the COM pin to NC pin.

Logic high voltage on SEL1 or SEL2 pins connect the COM pin to NO pin.

Table 1. TS3A5223 Function Table

SEL1	SEL2	COM1	COM2
0	0	NC1	NC2
1	1	NO1	NO2
1	0	NO1	NC2
0	1	NC1	NO2

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TS3A5223 switch is bidirectional, so the NO, NC and COM pins can be used as either inputs or outputs. This switch is typically used when there is only one signal path that needs to be able to communicate to 2 different signal paths.

9.2 Typical Application

Copyright © 2017, Texas Instruments Incorporated

Figure 13. Typical Application

9.2.1 Design Requirements

The TS3A5223 can be properly operated without any external components.

Unused pins COM, NC, and NO may be left floating or grounded.

Digital control pins IN must be pulled up to VCC or down to GND to avoid undesired switch positions that could result from the floating pin and cause excess current consumption. For more information, refer to the application note [Implications of Slow or Floating CMOS Inputs \(SCBA002\)](#).

9.2.2 Detailed Design Procedure

Ensure that all of the signals passing through the switch are within the ranges specified in [Recommended Operating Conditions](#) to ensure proper performance.

Typical Application (continued)

9.2.3 Application Curves

$$V_{CC} = 3.6 \text{ V}$$

Figure 14. On-Resistance vs. Switch Input Voltage

10 Power Supply Recommendations

TI recommends proper power-supply sequencing for all CMOS devices. Do not exceed the absolute-maximum ratings, because stresses beyond the listed ratings can cause permanent damage to the device. Always sequence VCC on first, followed by NO, NC, or COM. Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the VCC supply to other components. A 0.1- μ F capacitor, connected from VCC to GND, is adequate for most applications.

11 Layout

11.1 Layout Guidelines

- TI recommends following common printed-circuit board layout guidelines to ensure reliability of the device.
- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.

11.2 Layout Example

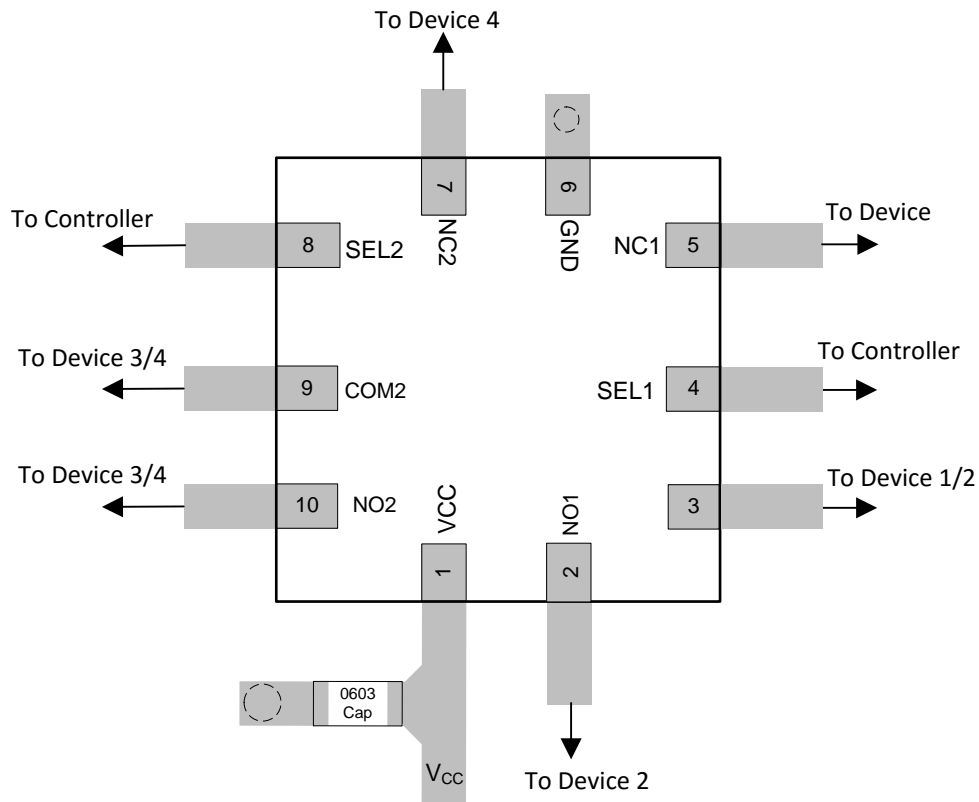

Figure 15. Layout Example

12 Device and Documentation Support

12.1 Documentation Support

12.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.4 Trademarks

E2E is a trademark of Texas Instruments.

12.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.6 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TS3A5223RSWR	ACTIVE	UQFN	RSW	10	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	B2A	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties.
