

## LM118JAN Operational Amplifier

 Check for Samples: [LM118JAN](#)

### FEATURES

- 15 MHz Small Signal Bandwidth
- Ensured 50V/μs Slew Rate
- Maximum Bias Current of 250 nA
- Operates from Supplies of ±5V to ±20V
- Internal Frequency Compensation
- Input and Output Overload Protected
- Pin Compatible with General Purpose Op Amps

### DESCRIPTION

The LM118 is a precision high speed operational amplifier designed for applications requiring wide bandwidth and high slew rate. It features a factor of ten increase in speed over general purpose devices without sacrificing DC performance.

The LM118 has internal unity gain frequency compensation. This considerably simplifies its application since no external components are necessary for operation. However, unlike most internally compensated amplifiers, external frequency compensation may be added for optimum performance. For inverting applications, feed forward compensation will boost the slew rate to over 150V/μs and almost double the bandwidth. Overcompensation can be used with the amplifier for greater stability when maximum bandwidth is not needed. Further, a single capacitor can be added to reduce the 0.1% settling time to under 1 μs.

The high speed and fast settling time of this op amp makes it useful in A/D converters, oscillators, active filters, sample and hold circuits, or general purpose amplifiers. This device is easy to apply and offers an order of magnitude better AC performance than industry standards such as the LM709.

### Fast Voltage Follower

Do not hard-wire as voltage follower ( $R1 \geq 5 \text{ k}\Omega$ )

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Schematic Diagram

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

**Absolute Maximum Ratings<sup>(1)</sup>**

Supply Voltage		±20V	
Power Dissipation <sup>(2)</sup>	8 LD TO	750mW	
	8LD CDIP	1000mW	
	14LD CDIP	1250mW	
	10LD CLGA	600mW	
Differential Input Current <sup>(3)</sup>		±10 mA	
Input Voltage <sup>(4)</sup>		±15V	
Output Short-Circuit Duration		Continuous	
Operating Temperature Range		-55°C ≤ T <sub>A</sub> ≤ +125°C	
Thermal Resistance	θ <sub>JA</sub>	8 LD TO (Still Air @ 0.5W)	160°C/W
		8 LD TO (500LF / Min Air flow @ 0.5W)	86°C/W
		8LD CDIP (Still Air @ 0.5W)	120°C/W
		8LD CDIP (500LF / Min Air flow @ 0.5W)	66°C/W
		14LD CDIP (Still Air @ 0.5W)	87°C/W

	θ <sub>JC</sub>	8 LD TO	48°C/W
		8LD CDIP	17°C/W
		14LD CDIP	17°C/W
		10LD CLGA	22°C/W
Storage Temperature Range		-65°C ≤ T <sub>A</sub> ≤ +150°C	
Lead Temperature (Soldering, 10 seconds)		300°C	
ESD Tolerance <sup>(5)</sup>		2000V	

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the Electrical Characteristics. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) The maximum power dissipation must be derated at elevated temperatures and is dictated by T<sub>Jmax</sub> (maximum junction temperature), θ<sub>JA</sub> (package junction to ambient thermal resistance), and T<sub>A</sub> (ambient temperature). The maximum allowable power dissipation at any temperature is P<sub>Dmax</sub> = (T<sub>Jmax</sub> - T<sub>A</sub>)/θ<sub>JA</sub> or the number given in the Absolute Maximum Ratings, whichever is lower.
- (3) The inputs are shunted with back-to-back diodes for over voltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs unless some limiting resistance is used.
- (4) For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.
- (5) Human body model, 1.5 kΩ in series with 100 pF.

**REVISION HISTORY SECTION**

<b>Date Released</b>	<b>Revision</b>	<b>Section</b>	<b>Originator</b>	<b>Changes</b>
07/12/05	A	New Release, Corporate format	L. Lytle	1 MDS data sheet, MJLM118–X Rev 0A0 was converted into the Corp. datasheet format. MDS datasheet will be archived.
03/20/2013	A	All Sections		Changed layout of National Data Sheet to TI format

**PACKAGING INFORMATION**

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
JL118BPA	Active	Production	CDIP (NAB)   8	40   TUBE	No	SNPB	Level-1-NA-UNLIM	-55 to 125	JL118BPA Q JM38510/ 10107BPA ACO (10107BPA >T, 1010 7BPA MYS)

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
