LMG708B0 65V_{IN}, 20A, High-Power Density, GaN Synchronous Buck Converter

1 Features

- 20A synchronous buck DC/DC converter
  - Low $R_{DS(on)}$ gallium-nitride (GaN) power FETs
  - Wide input voltage range of 5V to 65V (with transients as high as 80V)
  - Adjustable output voltage from 1V to 40V, or fixed output options of 5V or 12V
  - Maximum case temperature of 135°C
  - Frequency adjustable from 200kHz to 2.64MHz
  - 25ns $t_{ON(min)}$ for high step-down conversion
  - CV or CC regulation with dynamic adjustment
- High efficiency across the full load range
  - 97% at 48V_{IN}, 12V_{OUT}, 20A, 400kHz
  - Optimized near-zero deadtime switching
  - Multiphase stackable for higher output current
  - Dual-input VCC subregulator with BIAS option
  - Thermally-enhanced eQFN-22 package with optional top-side cooling
- Designed for ultra-low emissions requirements
  - Spread spectrum (DRSS) frequency modulation
  - Optional external clock synchronization
  - Selectable FPWM or PFM mode at light loads
  - Integrated bootstrap capacitor
- Integrated protection features for robust design
  - Hiccup-mode overcurrent protection
  - Average output current monitoring (IMON)
  - Precision enable and PGOOD functions
  - VIN, VCC, and gate-drive UVLO protection
- Create a custom design using the LMG708B0 with the WEBENCH® Power Designer

2 Applications

- Data center compute: power distribution board
- Data center networking: optical module
- Industrial: test and measurement, robotics

3 Description

The LMG708B0 is a GaN synchronous buck DC/DC converter offered from a family of devices that provide ultra-high current density and excellent power conversion efficiency. The integrated low $R_{DS(on)}$ GaN FETs with near-zero dead-time switching performance enable up to 20A of output current across a wide input voltage range from 5V to 65V (with transients to 80V).

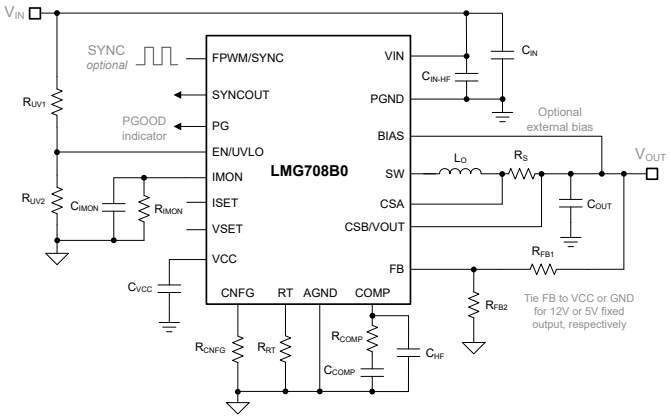

Phase stackable with synchronized interleaving, the peak current-mode architecture of the LMG708B0 supports accurate current sharing with paralleled phases for even higher output current. Along with constant-voltage (CV) operation, a dual-loop architecture with shared compensation provides constant-current (CC) regulation for battery charging and other current-source type loads. This cohesive approach enables a seamless transition between CV and CC modes, and high accuracy for voltage (±1%) and current (±4.5%) regulation, effectively reducing the bill-of-materials (BOM) cost for applications that require average output current control. VSET and ISET inputs facilitate dynamic adjustment of the respective CV and CC loop setpoints, and an IMON output provides average output current monitoring.

The LMG708B0 has a thermally enhanced package (TEP) with optional top-side cooling (TSC) through exposed package connections and low package parasitic inductance for quiet switching performance.

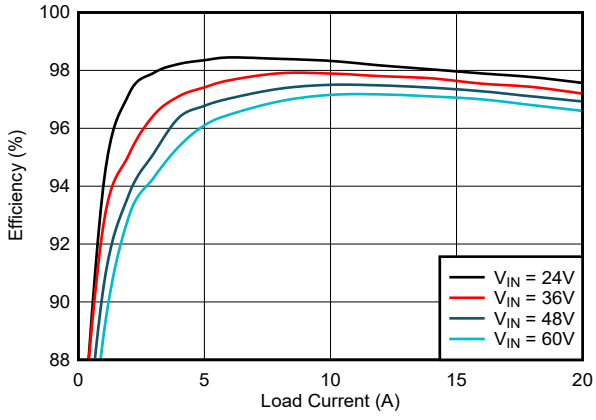

Package Information

PART NUMBER	PACKAGE(1)	PACKAGE SIZE(2)
LMG708B0	VBT (VQFN, 22)	4.5mm × 6mm

(1) For more information, see Section 6.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.

Typical Schematic

Efficiency, V_{OUT} = 12V, F_{SW} = 400kHz

ADVANCE INFORMATION

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. ADVANCE INFORMATION for preproduction products; subject to change without notice.

A high-side switch minimum on-time of 25ns facilitates large step-down ratios, enabling the direct conversion from 24V or 48V inputs to low-voltage rails for reduced system design cost and complexity. The LMG708B0 continues to operate during input voltage dips as low as 5V, at close to 100% duty cycle if needed. The 20µA sleep quiescent current with the output voltage in regulation extends operating run-time in battery-powered systems.

The LMG708B0 includes several features to simplify compliance with CISPR 11 and CISPR 32 conducted emissions requirements. Predictably timed GaN FET gate drivers along with integrated bootstrap switch and capacitor minimize deadtime during switching transitions, reducing switching losses and improving EMI performance at high input voltage and high switching frequency. To reduce input capacitor ripple current and EMI filter size, interleaved operation using a SYNCOUT signal with programmable phase shift works well for cascaded, multichannel or multiphase designs. Resistor-adjustable switching frequency as high as 2.2MHz can be synchronized to an external clock source up to 2.64MHz to eliminate beat frequencies in noise-sensitive applications. Finally, the LMG708B0 has dual-random spread spectrum (DRSS), a unique EMI-reduction feature that combines low-frequency triangular and high-frequency random modulations to mitigate EMI disturbances across lower and higher frequency bands, respectively.

Additional features of the LMG708B0 include 135°C maximum case temperature operation, user-selectable PFM mode for lower current consumption during light-load conditions, integrated bootstrap capacitor with synchronous charging for robust level shifting, open-drain power-good (PG) indicator for fault reporting and output monitoring, precision enable input for input UVLO, monotonic start-up into prebiased loads, dual-input VCC bias subregulator, 30mV full-scale current sensing, hiccup-mode overload protection, and thermal shutdown protection with automatic recovery for the controller.

The LMG708B0 comes in a 4.5mm × 6mm, thermally enhanced, 22-pin eQFN package using a flip-chip routable leadframe (FCRLF) packaging technique. Leveraging high-performance GaN power FETs (based on TI's proprietary GaN IC technology), thermal management and EMI mitigation features, CC/CV operation, and small design size, the LMG708B0 represents an excellent point-of-load regulator choice for applications requiring the most efficient GaN design with useable current, lifetime reliability, and cost advantages.

4.1.1.1 Custom Design With WEBENCH® Tools

Click here to create a custom design using the LMG708B0 device with the WEBENCH® Power Designer.

1. Start by entering the input voltage (V_{IN}), output voltage (V_{OUT}), and output current (I_{OUT}) requirements.
2. Optimize the design for key parameters such as efficiency, footprint, and cost using the optimizer dial.
3. Compare the generated design with other possible designs from Texas Instruments.

The WEBENCH Power Designer gives a customized schematic along with a list of materials with real-time pricing and component availability.

In most cases, these actions are available:

- Run electrical simulations to see important waveforms and circuit performance
- Run thermal simulations to understand board thermal performance
- Export customized schematic and layout into popular CAD formats
- Print PDF reports for the design, and share the design with colleagues

Get more information about WEBENCH tools at www.ti.com/WEBENCH.

4.2 Documentation Support

4.2.1 Related Documentation

For related documentation, see the following:

ADVANCE INFORMATION

4.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

4.7 Glossary

TI Glossary — This glossary lists and explains terms, acronyms, and definitions.

5 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision * (October 2025) to Revision A (September 2026)	Page
• Updated maximum values for input voltage and output voltage in *Features*	1
• Updated the list of *Applications*	1
• Updated to a case temperature specification in the *Features* and *Description*	1
• Added links to the two-phase EVM and a GaN tech article in *Development Support*	4

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package | Pins	Package qty | Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
PLMG708B0VBTR	Active	Preproduction	VQFN-FCRLF (VBT) | 22	3000 | LARGE T&R	-	Call TI	Call TI	-40 to 125	

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
