

LOW-POWER CAN TRANSCEIVER WITH BUS WAKE-UP

Check for Samples: [SN65HVD1040-HT](#)

FEATURES

- Improved Drop-in Replacement for the TJA1040
- ± 12 kV ESD Protection
- Low-Current Standby Mode with Bus Wake-up: 5 μ A Typical
- Bus-Fault Protection of -27 V to 40 V
- Rugged Split-Pin Bus Stability
- Dominant Time-Out Function
- Thermal Shutdown Removed
- Power-Up/Down Glitch-Free Bus Inputs and Outputs
 - High Input Impedance with Low V_{CC}
 - Monotonic Outputs During Power Cycling
- DeviceNet Vendor ID # 806

APPLICATIONS

- Down-Hole Drilling
- High Temperature Environments
- Vibration/Modal Analysis
- Multi-Channel Data Acquisition
- Acoustics/Dynamic Strain Gauges
- Pressure Sensors

SUPPORTS EXTREME TEMPERATURE APPLICATIONS

- Controlled Baseline
- One Assembly/Test Site
- One Fabrication Site
- Available in Extreme ($-55^{\circ}\text{C}/210^{\circ}\text{C}$) Temperature Range ⁽¹⁾
- Extended Product Life Cycle
- Extended Product-Change Notification
- Product Traceability
- Texas Instruments high temperature products utilize highly optimized silicon (die) solutions with design and process enhancements to maximize performance over extended temperatures. All devices are characterized and qualified for 1000 hours continuous operating life at maximum rated temperature.

(1) Custom temperature ranges available

DESCRIPTION

The SN65HVD1040 meets or exceeds the specifications of the ISO 11898 standard for use in applications employing a Controller Area Network (CAN). As CAN transceivers, these devices provide differential transmit and receive capability for a CAN controller at signaling rates of up to 1 megabit per second (Mbps). ⁽²⁾

Designed for operation in especially harsh environments, the device features ± 12 kV ESD protection on the bus and split pins, cross-wire, overvoltage and loss of ground protection from -27 to 40 V, a -12 V to 12 V common-mode range, and will withstand voltage transients from -200 V to 200 V according to ISO 7637.

The STB input (pin 8) selects between two different modes of operation; high-speed or low-power mode. The high-speed mode of operation is selected by connecting STB to ground.

If a high logic level is applied to the STB pin of the SN65HVD1040, the device enters a low-power bus-monitor standby mode. While the SN65HVD1040 is in the low-power bus-monitor standby mode, a dominant bit greater than 5 μ s on the bus is passed by the bus-monitor circuit to the receiver output. The local protocol controller may then reactivate the device when it needs to transmit to the bus.

A dominant-time-out circuit in the SN65HVD1040 prevents the driver from blocking network communication during a hardware or software failure. The time-out circuit is triggered by a falling edge on TXD (pin 1). If no rising edge is seen before the time-out constant of the circuit expires, the driver is disabled. The circuit is then reset by the next rising edge on TXD.

(2) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

The SPLIT output (pin 5) is available on the SN65HVD1040 as a $V_{CC}/2$ common-mode bus voltage bias for a split-termination network.

The SN65HVD1040 is characterized for operation from -55°C to 210°C .

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

Table 1. ORDERING INFORMATION⁽¹⁾

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

				VALUE
V _{CC}	Supply voltage ⁽²⁾			−0.3 V to 7 V
V _{I(bus)}	Voltage range at any bus terminal (CANH, CANL, SPLIT)			−27 V to 40 V
I _{O(OUT)}	Receiver output current			-20 mA to 20 mA
Voltage input, transient pulse ⁽³⁾ , (CANH, CANL, SPLIT)				−200 V to 200 V
ESD	IEC Contact Discharge	(IEC 61000-4-2)	Bus terminals vs GND	±6 kV
	Human body model	JEDEC Standard 22, Test Method A114-C.01	Bus terminals vs GND	±12 kV
			All pins	±4 kV
	Field-Induced-Charged Device Model	JEDEC Standard 22, Test Method C101	All pins	±1 kV
	Machine model	ANSI/ESDS5.2-1996		±200 V
IEC			Bus terminals vs GND	±6 kV
V _I	Voltage input range (TXD, STB)			−0.5 V to 6 V
T _J	Junction temperature			−55°C to 210°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
- (3) Tested in accordance with ISO 7637, test pulses 1, 2, 3a, 3b, 5, 6 & 7.

THERMAL CHARACTERISTICS FOR HKQ PACKAGE

over operating free-air temperature range (unless otherwise noted)

PARAMETER			MIN	TYP	MAX	UNIT
θ_{JC}	Junction-to-case thermal resistance	to ceramic side of case			5.7	°C/W
		to top of case lid (metal side of case)			13.7	

THERMAL INFORMATION FOR D PACKAGE

THERMAL METRIC ⁽¹⁾		SN65HVD1040	UNITS
		D	
		8 PINS	
θ_{JA}	Junction-to-ambient thermal resistance ⁽²⁾	91.9	°C/W
θ_{JCTop}	Junction-to-case (top) thermal resistance ⁽³⁾	39.9	
θ_{JB}	Junction-to-board thermal resistance ⁽⁴⁾	40.6	
ψ_{JT}	Junction-to-top characterization parameter ⁽⁵⁾	3.9	
ψ_{JB}	Junction-to-board characterization parameter ⁽⁶⁾	39.6	
θ_{JCbott}	Junction-to-case (bottom) thermal resistance ⁽⁷⁾	N/A	

- (1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).
- (2) The junction-to-ambient thermal resistance under natural convection is obtained in a simulation on a JEDEC-standard, high-K board, as specified in JESD51-7, in an environment described in JESD51-2a.
- (3) The junction-to-case (top) thermal resistance is obtained by simulating a cold plate test on the package top. No specific JEDEC-standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.
- (4) The junction-to-board thermal resistance is obtained by simulating in an environment with a ring cold plate fixture to control the PCB temperature, as described in JESD51-8.
- (5) The junction-to-top characterization parameter, ψ_{JT} , estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining θ_{JA} , using a procedure described in JESD51-2a (sections 6 and 7).
- (6) The junction-to-board characterization parameter, ψ_{JB} , estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining θ_{JA} , using a procedure described in JESD51-2a (sections 6 and 7).
- (7) The junction-to-case (bottom) thermal resistance is obtained by simulating a cold plate test on the exposed (power) pad. No specific JEDEC standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.

RECOMMENDED OPERATING CONDITIONS

			T _J = -55°C to 125°C			T _J = -55°C to 175°C			T _J = -55°C to 210°C			UNIT
			MIN	NOM	MAX	MIN	NOM	MAX	MIN	NOM	MAX

DEVICE INFORMATION

Table 6. Parametric Cross Reference With the TJA1040

TJA1040⁽¹⁾	PARAMETER	HVD10xx
TJA1040 DRIVER SECTION		
V_{IH}	High-level input voltage	Recommended V_{IH}
V_{IL}	Low-level input voltage	Recommended V_{IL}
I_{IH}	High-level input current	Driver I_{IH}
I_{IL}	Low-level input current	Driver I_{IL}
TJA1040 BUS SECTION		
$V_{th(dif)}$	Differential input voltage	Receiver V_{IT} and recommended V_{ID}
$V_{hys(dif)}$	Differential input hysteresis	Receiver V_{hys}
$V_{O(dom)}$	Dominant output voltage	Driver $V_{O(D)}$
$V_{O(reces)}$	Recessive output voltage	Driver $V_{O(R)}$
$V_{I(dif)(th)}$	Differential input voltage	Receiver V_{IT} and recommended V_{ID}
$V_{O(dif0)(bus)}$	Differential bus voltage	Driver $V_{OD(D)}$ and $V_{OD(R)}$
I_{LI}	Power-off bus input current	Receiver $I_{I(off)}$
$I_{O(SC)}$	Short-circuit output current	Driver $I_{OS(SS)}$
$R_{I(cm)}$	CANH, CANL input resistance	Receiver R_{IN}
$R_{I(def)}$	Differential input resistance	Receiver R_{ID}
$R_{I(cm)} (m)$	Input resistance matching	Receiver $R_{I (m)}$
$C_{I(cm)}$	Input capacitance to ground	Receiver C_I
$C_{I(dif)}$	Differential input capacitance	Receiver C_{ID}
TJA1040 RECEIVER SECTION		
I_{OH}	High-level output current	Recommended I_{OH}
I_{OL}	Low-level output current	Recommended I_{OL}
TJA1040 SPLIT PIN SECTION		
V_O	Reference output voltage	V_O
TJA1040 TIMING SECTION		
$t_d(TXD-BUSon)$	Delay TXD to bus active	Driver t_{PLH}
$t_d(TXD-BUSoff)$	Delay TXD to bus inactive	Driver t_{PHL}
$t_d(BUSon-RXD)$	Delay bus active to RXD	Receiver t_{PHL}
$t_d(BUSoff-RXD)$	Delay bus inactive to RXD	Receiver t_{PLH}
$t_{PD}(TXD-RXD)$	Prop delay TXD to RXD	Device t_{LOOP1} and t_{LOOP2}
$t_d(stb-norm)$	Enable time from standby to dominant	Driver t_{en}
TJA1040 STB PIN SECTION		
V_{IH}	High-level input voltage	Recommended V_{IH}
V_{IL}	Low-level input voltage	Recommended V_{IL}
I_{IH}	High-level input current	I_{IH}
I_{IL}	Low-level input current	I_{IL}

APPLICATION INFORMATION

CAN Basics

The basics of arbitration require that the receiver at the sending node designate the first bit as dominant or recessive after the initial wave of the first bit of a message travels to the most remote node on a network and back again. Typically, this “sample” is made at 75% of the bit width, and within this limitation, the maximum allowable signal distortion in a CAN network is determined by network electrical parameters.

Factors to be considered in network design include the approximately 5 ns/m propagation delay of typical twisted-pair bus cable; signal amplitude loss due to the loss mechanisms of the cable; and the number, length, and spacing of drop-lines (stubs) on a network. Under strict analysis, variations among the different oscillators in a system also need to be accounted for with adjustments in signaling rate and stub and bus length. [Table 7](#) lists the maximum signaling rates achieved with the SN65HVD1040 with several bus lengths of category 5, shielded twisted pair (CAT 5 STP) cable.

Table 7. Maximum Signaling Rates for Various Cable Lengths

Bus Length (m)	Signaling Rate (kbps)
30	1000
100	500
250	250
500	125
1000	62.5

The ISO 11898 Standard specifies a maximum bus length of 40 m and maximum stub length of 0.3 m with a maximum of 30 nodes. However, with careful design, users can have longer cables, longer stub lengths, and many more nodes to a bus. (Note: Non-standard application may come with a trade-off in signaling rate.) A large number of nodes requires a transceiver with high input impedance such as the HVD1040.

The Standard specifies the interconnect to be a single twisted-pair cable (shielded or unshielded) with 120 Ω characteristic impedance (Z_0). Resistors equal to the characteristic impedance of the line terminate both ends of the cable to prevent signal reflections. Unterminated drop-lines connect nodes to the bus and should be kept as short as possible to minimize signal reflections.

Connectors, while not specified by the standard should have as little effect as possible on standard operating parameters such as capacitive loading. Although unshielded cable is used in many applications, data transmission circuits employing CAN transceivers are usually used in applications requiring a rugged interconnection with a wide common-mode voltage range. Therefore, shielded cable is recommended in these electronically harsh environments, and when coupled with the Standard's –2-V to 7-V common-mode range of tolerable ground noise, helps to ensure data integrity. The HVD1040 enhances the Standard's insurance of data integrity with an extended –12 V to 12 V range of common-mode operation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
