

MuxIt™ RECEIVER-DESERIALIZER

Check for Samples: [SN65LVDS152](#)

FEATURES

- A Member of the MuxIt™ Serializer-Deserializer Building-Block Chip Family
- Supports Deserialization of One Serial Link Data Channel Input at Rates up to 200 Mbps
- PLL Lock/Valid Input Provided to Enable Parallel Data and Clock Outputs
- Cascadable With Additional SN65LVDS152 MuxIt Receiver-Deserializers for Wider Parallel Output Data Channel Widths
- LVDS Compatible Differential Inputs and Outputs Meet or Exceed the Requirements of ANSI TIA/EIA-644-A
- LVDS Input and Output ESD Protection Exceeds 12 kV HBM
- LVTTTL Compatible Inputs for Lock/Valid and Enables Are 5-V Tolerant
- Operates With 3.3-V Supply
- Packaged in 32-Pin DA Thin Shrink Small-Outline Package With 26-Mil Terminal Pitch

DESCRIPTION

MuxIt is a family of general-purpose, multiple-chip building blocks for implementing parallel data serializers and deserializers. The system allows for wide parallel data to be transmitted through a reduced number of transmission lines over distances greater than can be achieved with a single-ended (e.g., LVTTTL or LVCMOS) data interface. The number of bits multiplexed per transmission line is user selectable, allowing for higher transmission efficiencies than with other existing fixed ratio solutions. MuxIt utilizes the LVDS (TIA/EIA-644-A) low voltage differential signaling technology for communications between the data source and data destination.

The MuxIt family initially includes three devices supporting simplex communications: the SN65LVDS150 phase locked loop frequency multiplier, the SN65LVDS151 serializer-transmitter, and the SN65LVDS152 receiver-deserializer.

The SN65LVDS152 consists of three LVDS differential transmission line receivers, an LVDS differential transmission line driver, a 10-bit serial-in/parallel-out shift register, plus associated input and output buffers. It receives serialized data over an LVDS transmission line link, deserializes (demultiplexes) it, and delivers it on parallel data outputs, DO-0 through DO-9. Data received over the link is clocked at a factor of M times the original parallel data frequency. The multiplexing ratio M, or number of bits per data clock cycle, is programmed with configuration pins (M1 → M5) on the companion SN65LVDS150 MuxIt programmable PLL frequency multiplier. Up to 10 bits of data may be deserialized and output by each SN65LVDS152. Two or more SN65LVDS152 units may be connected in series (cascaded) to accommodate wider parallel data paths for higher serialization values. The range of multiplexing ratio M supported by the SN65LVDS150 MuxIt programmable PLL frequency multiplier is between 4 and 40. [Table 1](#) shows some of the combinations of LCI and MCI supported by the SN65LVDS150 MuxIt programmable PLL frequency multiplier.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

MuxIt is a trademark of Texas Instruments.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

DESCRIPTION (CONTINUED)

Data is serially shifted into the SN65LVDS152 shift register on the falling edges of the M-clock input (MCI). The data is latched out in parallel from the SN65LVDS152 shift register on the second rising edge after the first falling edge of the M-clock following a rising edge of the link clock input (LCI). The SN65LVDS152 includes LVDS differential line receivers for both the serialized link data stream (DI) and link clock (LCI). High-speed signals from the SN65LVDS150 MuxIt programmable frequency multiplier (MCI), plus the input and output for cascaded data (DI, CO) are carried over differential connections to minimize skew and jitter. Examples of operating waveforms for values of $M = 4$ and $M = 10$ are provided in [Figure 1](#).

The enable input (EN) along with internal power-on reset (POR) controls the outputs. When V_{CC} is below 1.5 volts, or when EN is low, outputs are disabled. When V_{CC} is above 3 V and EN is high, outputs are enabled and operating to specifications.

Parallel data bits are output from DO-n outputs in an order dependent on the value of the multiplexing ratio (frequency multiplier value) M . For values of M from 4 through 10, the cascade output (CO_{\pm}) is not used, and only the top M parallel outputs (DO-9 through DO-[10-M]) are used. The data bit output on DO-9 corresponds to the data bit input on DI-[$M-1$] of the SN65LVDS151 serializer. Likewise, the data bit output on DO-[10-M] will correspond to the data bit input on DI-0 of the SN65LVDS151 serializer.

For values of M greater than 10, the cascade output (CO_{\pm}) is used to connect multiple SN65LVDS152 deserializers. In this case the higher-order unit(s) output 10 bits each of the highest numbered bits that are input into the SN65LVDS151 serializer(s). The lowest numbered input bits are output on the lowest-order SN65LVDS152 deserializer in descending order from output DO-9. The number of bits is equal to $M \bmod(10)$. [Table 2](#) reflects this information, where $X = M \bmod(10)$

Table 1. Example Combinations of LCI and MCI Supported by the SN65LVDS150 MuxIt Programmable PLL Frequency Multiplier

M	LCI, MHz		MCI, MHz	
	MINIMUM	MAXIMUM	MINIMUM	MAXIMUM
4	5	50	20	200
10	5	20	50	200
20	5	10	100	200
40	5	5	200	200

Table 2. Output Data Bits as a Function of Multiplier Value M

	X = 1	X = 2	X = 3	X = 4	X = 5	X = 6	X = 7	X = 8	X = 9	X = 0
DO-9 output bit	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6	DI-7	DI-8	DI-9
DO-8 output bit	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6	DI-7	DI-8
DO-7 output bit	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6	DI-7
DO-6 output bit	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6
DO-5 output bit	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5
DO-4 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4
DO-3 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3
DO-2 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2
DO-1 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1
DO-0 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0

Additional information on output bit ordering in cascaded applications can be found in the MuxIt Application Report.

FUNCTIONAL BLOCK DIAGRAM

EQUIVALENT INPUT AND OUTPUT SCHEMATIC DIAGRAMS

Terminal Functions

TERMINAL NAME	TERMINAL NO.	I/O	LEVEL	DESCRIPTION
CO-, CO+	15, 16	Output	LVDS	Cascade output. This is used to connect to additional SN65LVDS152 units when the multiplexing ratio M (and M-clock) value is greater than 10.
CO_EN	7	Input	LVTTTL	Cascade output enable. Used to control the CO output. A high-level input enables the CO output, a low-level input disables the CO output.
DCO	27	Output	LVTTTL	Data clock output. This is the recovered (original frequency) clock that is synchronized to the deserialized parallel data.
DI+, DI-	1, 2	Input	LVDS	Link data input. This is the data being received from the source end of the serialized link. Also used for cascade data input from additional SN65LVDS152 units when the multiplexing ratio M value is greater than 10.
EN	14	Input	LVTTTL	Enable. Used to control overall device operation. A high-level input enables the device. A low-level input disables the device by resetting the internal latches and forcing the CO and LVTTTL outputs to a high-impedance state.
GND	3, 6, 9, 12, 13, 28	Power	NA	Circuit ground
LCI+, LCI-	4, 5	Input	LVDS	Link clock input. This is the data block synchronization clock received from the source end of the serialized link.
LVI	31	Input	LVTTTL	Lock/valid input. This is a signal required for proper MuxIt system operation. It is to be directly connected to the LVO output of an SN65LVDS150. It is used to inhibit the operation of this device until after the PLL has stabilized. A low level input disables the data and clock outputs, a high level input enables the outputs
MCI+, MCII-	29,30	Input	LVDS	M-clock input. This is the high frequency multiplied clock input from the local PLL frequency multiplier. It synchronizes the reception of the link data
DOI-0I-DOI-9	17-26	Output	LVTTTL	Parallel data outputs. Data from the serial shift register is transferred to the output data latches in synchronization with the rising edge of LCI.
V _{CC}	8, 10, 11, 32	Power	NA	Supply voltage

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		UNIT
Supply voltage range, V_{CC} ⁽²⁾		–0.5 V to 4 V
Input voltage range	EN, LVI, CO_EN	–0.5 V to 5.5 V
	LCl±, MCl±, DI±, CO±	–0.5 V to 4 V
Electrostatic discharge, human body model ⁽³⁾	LCl±, MCl±, DI±, CO±, and GND	±12 kV
	All pins	±2 kV
Charged-device model ⁽⁴⁾	All pins	±500 V
Continuous power dissipation		See Dissipation Rating Table
Storage temperature range		–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		260°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
- (3) Tested in accordance with JEDEC Standard 22, Test Method A114-B.
- (4) Tested in accordance with JEDEC Standard 22, Test Method C101.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN65LVDS152DA	ACTIVE	TSSOP	DA	32	46	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	65LVDS152	Samples
SN65LVDS152DAR	ACTIVE	TSSOP	DA	32	2000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	65LVDS152	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
