

#### SN54LVC540A, SN74LVC540A

SCAS297N - JANUARY 1993 - REVISED JUNE 2014

# SNx4LVC540A Octal Buffers/Drivers with 3-State Outputs

#### **Features**

- Operate From 1.65 V to 3.6 V
- Inputs Accept Voltages to 5.5 V
- Max  $t_{pd}$  of 5.3 ns at 3.3 V
- Typical V<sub>OLP</sub> (Output Ground Bounce)  $< 0.8 \text{ V at V}_{CC} = 3.3 \text{ V}, T_A = 25^{\circ}\text{C}$
- Typical V<sub>OHV</sub> (Output V<sub>OH</sub> Undershoot)  $> 2 \text{ V at V}_{CC} = 3.3 \text{ V}, T_A = 25^{\circ}\text{C}$
- Support Mixed-Mode Signal Operation on All Ports (5-V Input/Output Voltage With 3.3-V V<sub>CC</sub>)
- Ioff Supports Live Insertion, Partial Power Down Mode, and Back Drive Protection
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 1000-V Charged-Device Model (C101)
- On Products Compliant to MIL-PRF-38535, All Parameters Are Tested Unless Otherwise Noted. On All Other Products, Production Processing Does Not Necessarily Include Testing of All Parameters.

# 2 Applications

Handset: Smartphone

**Network Switch** 

Health and Fitness: Wearables

# Description

The SN54LVC540A octal buffer/driver is designed for 2.7-V to 3.6-V V<sub>CC</sub> operation, and the SN74LVC540A octal buffer/driver is designed for 1.65-V to 3.6-V  $V_{CC}$ operation.

#### Device Information<sup>(1)</sup>

| PART NUMBER | PACKAGE    | BODY SIZE (NOM)    |
|-------------|------------|--------------------|
|             | SIOC (20)  | 12.80 mm × 7.50 mm |
|             | SO (20)    | 12.60 mm × 5.30 mm |
| SN74LVC540A | SSOP (20)  | 7.50 mm × 5.30 mm  |
|             | TVSOP (20) | 5.00 mm × 4.40 mm  |
|             | TSSOP (20) | 6.50 mm × 4.40 mm  |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

# 5 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

| Cł | hanges from Revision M (May 2005) to Revision N         | Page |
|----|---|------|
| •  | Updated document to new data sheet standards            | 1    |
| •  | Deleted Ordering Information table.                     | 1    |
| •  | Added Military Disclaimer to Features list.             | 1    |
| •  | Added Device Information table.                         | 1    |
| •  | Added Handling Ratings table.                           | 4    |
| •  | Changed MAX ambient temperature to 125°C                | 5    |
| •  | Added Thermal Information table                         | 5    |
| •  | Added Typical Characteristics.                          | 7    |
| •  | Added Device and Documentation Support.                 | 12   |
| •  | Added ESD warning.                                      | 12   |
|    | Added Mechanical, Packaging, and Orderable Information. |      |

# 7 Specifications

# 7.1 Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

|                 |   |   | MIN  | MAX                   | UNIT |
|-----------------|---|---|------|-----------------------|------|
| $V_{CC}$        | Supply voltage range  |   | -0.5 | 6.5                   | V    |
| VI              | nput voltage range <sup>(2)</sup>   |   | -0.5 | 6.5                   | V    |
| Vo              | oltage range applied to any output in the high-impedance or power-off state (2) |   | -0.5 | 6.5                   | V    |
| Vo              | Voltage range applied to any output in the h                                    | Voltage range applied to any output in the high or low state (2)(3) |      | V <sub>CC</sub> + 0.5 | V    |
| I <sub>IK</sub> | Input clamp current   | V <sub>I</sub> < 0  |      | -50                   | mA   |
| I <sub>OK</sub> | Output clamp current  | V <sub>O</sub> < 0  |      | -50                   | mA   |
| Io              | Continuous output current   |   |      | ±50                   | mA   |
|                 | Continuous current through V <sub>CC</sub> or GND                               |   |      | ±100                  | mA   |

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## 7.2 Handling Ratings

|                    |                          |   | MIN | MAX  | UNIT |  |
|--------------------|--------------------------|---|-----|------|------|--|
| T <sub>stg</sub>   | Storage temperature rang | e   | -65 | 150  | °C   |  |
| V                  | Electrostatic discharge  | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins (1)              | 0   | 2000 | W    |  |
| V <sub>(ESD)</sub> | Electrostatic discharge  | Charged device model (CDM), per JEDEC specification JESD22-C101, all pins (2) | 0   | 1000 | V    |  |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

<sup>2)</sup> The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

<sup>(3)</sup> The value of V<sub>CC</sub> is provided in the Recommended Operating Conditions table.

# 7.3 Recommended Operating Conditions

NOTES: A.  $C_L$  includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_0 = 50 \Omega$ .
- D. The outputs are measured one at a time, with one transition per measurement.
- E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
- F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
- G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
- H. All parameters and waveforms are not applicable to all devices.

Figure 3. Load Circuit and Voltage Waveforms

# **Detailed Description**

#### 9.1 Overview

These devices are ideal for driving bus lines or buffer memory address registers. These devices feature inputs and outputs on opposite sides of the package that facilitate printed circuit board layout. The 3-state control gate is a 2-input AND gate with active-low inputs so that, if either output-enable (OE1 or OE2) input is high, all outputs are in the high-impedance state. Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed 3.3-V/5-V system environment. These devices are fully specified for partial-power-down applications using Ioff. The Ioff circuitry disables the outputs, preventing damaging current backflow through the devices when they are powered down. To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

#### 9.2 Functional Block Diagram

Figure 4. Logic Diagram (Positive Logic)

#### 9.3 Feature Description

- Wide operating voltage range
  - Operates from 1.65 V to 3.6 V
- Allows down voltage translation
  - Inputs accept voltages to 5.5 V
- I<sub>off</sub> Feature
  - Allows voltages on the inputs and outputs when V<sub>CC</sub> is 0 V

### 9.4 Device Functional Modes

# 10 Application and Implementation

### 10.1 Application Information

The SN74LVC540A is a high drive CMOS device that can be used for a multitude of bus interface type applications where the data needs to be retained or latched . It can produce 24 mA of drive current at 3.3 V making it ideal for driving multiple outputs and good for high speed applications up to 100 MHz. The inputs are 5.5 V tolerant allowing it to translate down to  $V_{\rm CC}$ .

# 10.2 Typical Application

Figure 5. Typical Application Diagram

#### 10.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Care should be taken to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads so routing and load conditions should be considered to prevent ringing.

#### 10.2.2 Detailed Design Procedure

- 1. Recommended Input Conditions
  - Rise time and fall time specs: See (Δt/ΔV) in the Recommended Operating Conditions table.
  - Specified high and low levels: See (V<sub>IH</sub> and V<sub>IL</sub>) in the Recommended Operating Conditions table.
  - Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid V<sub>CC</sub>.
- 2. Recommend Output Conditions
  - Load currents should not exceed 25 mA per output and 50 mA total for the part.
  - Outputs should not be pulled above V<sub>CC</sub>.

# Typical Application (continued)

# 10.2.3 Application Curves

# 11 Power Supply Recommendations

The power supply can be any voltage between the MIN and MAX supply voltage rating located in the Recommended Operating Conditions table.

Each  $V_{CC}$  pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, 0.1  $\mu$ F is recommended; if there are multiple  $V_{CC}$  pins, then 0.01  $\mu$ F or 0.022  $\mu$ F is recommended for each power pin. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. A 0.1  $\mu$ F and a 1  $\mu$ F are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

## 12 Layout

#### 12.1 Layout Guidelines

When using multiple bit logic devices inputs should not ever float. In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified below are the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or  $V_{CC}$  whichever make more sense or is more convenient. It is generally OK to float outputs unless the part is a transceiver. If the transceiver has an output enable pin it will disable the outputs section of the part when asserted. This will not disable the input section of the IO's so they also cannot float when disabled.

#### 13.2 Trademarks

All trademarks are the property of their respective owners.

## 13.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

#### 13.4 Glossary

SLYZ022 — TI Glossary.

This glossary lists and explains terms, acronyms and definitions.

# 14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

PACKAGE OPTION ADDENDUM

www.ti.com 14-Oct-2022

- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
