

## TCAN1051 Fault Protected CAN Transceiver with CAN FD

### 1 Features

- Meets the ISO 11898-2:2016 and ISO 11898-5:2007 physical layer standards
- Functional Safety-Capable**
  - Documentation available to aid functional safety system design
- 'Turbo' CAN:
  - All devices support classic CAN and 2 Mbps CAN FD (flexible data rate) and "G" options support 5 Mbps
  - Short and symmetrical propagation delay times and fast loop times for enhanced timing margin
  - Higher data rates in loaded CAN networks
- I/O Voltage range supports 3.3 V and 5 V MCUs
- Ideal passive behavior when unpowered
  - Bus and logic terminals are high impedance (no load)
  - Power up/down with glitch free operation on bus and RXD output
- Protection features
  - HBM ESD protection:  $\pm 16$  kV
  - IEC ESD protection up to  $\pm 15$  kV
  - Bus Fault protection:  $\pm 58$  V (non-H variants) and  $\pm 70$  V (H variants)
  - Undervoltage protection on  $V_{CC}$  and  $V_{IO}$  (V variants only) supply terminals
  - Driver dominant time out (TXD DTO) - Data rates down to 10 kbps
  - Thermal shutdown protection (TSD)
- Receiver common mode input voltage:  $\pm 30$  V
- Typical loop delay: 110 ns
- Junction temperatures from  $-55^{\circ}\text{C}$  to  $150^{\circ}\text{C}$
- Available in SOIC(8) package and leadless VSON(8) Package (3.0 mm x 3.0 mm) with improved automated optical inspection (AOI) capability

### 2 Applications

- All devices support highly loaded CAN networks
- Heavy machinery ISOBUS applications – ISO 11783
- Industrial automation, control, sensors and drive systems
- Building, security and climate control automation
- Telecom base station status and control
- CAN Bus standards such as CANopen, DeviceNet, NMEA2000, ARNIC825, ISO11783, CANaerospace

### 3 Description

This CAN transceiver family meets the ISO11898-2 (2016) High Speed CAN (Controller Area Network) physical layer standard. All devices are designed for use in CAN FD networks up to 2 Mbps (megabits per second). Devices with part numbers that include the "G" suffix are designed for data rates up to 5 Mbps, and versions with the "V" have a secondary power supply input for I/O level shifting the input pin thresholds and RXD output level. This family of devices comes with silent mode which is also commonly referred to as listen-only mode. Additionally, all devices include many protection features to enhance device and network robustness.

#### Device Information

PART NUMBER	PACKAGE <sup>(1)</sup>	BODY SIZE
TCAN1051x	SOIC (8)	4.90 mm x 3.91 mm
	VSON (8)	3.00 mm x 3.00 mm

- (1) For all available packages, see the orderable addendum at the end of the data sheet.

- A. Terminal 5 function is device dependent; NC on devices without the "V" suffix, and  $V_{IO}$  for I/O level shifting for devices with the "V" suffix.
- B. RXD logic output is driven to  $V_{CC}$  on devices without the "V" suffix, and  $V_{IO}$  for devices with the "V" suffix.

## 4 Revision History

### Changes from Revision D (May 2017) to Revision E (April 2021) Page

• Added <i>Feature</i> "Functional Safety-Capable".....	1
---	---

### Changes from Revision C (March 2016) to Revision D (May 2017) Page

• Deleted <i>Feature</i> "Meets the December 17th, 2015 Draft of ISO 11898-2 Physical Layer Update".....	1
• Changed <i>Feature</i> From: "Meets the Released ISO 11898-2:2007 and ISO 11898-2:2003 Physical Layer Standards" To: "Meets the ISO 11898-2:2016 and ISO 11898-5:2007 Physical Layer Standards".....	1
• Changed <i>Feature</i> From: "All devices support 2 Mbps CAN FD.." To: "All Devices Support Classic CAN and 2 Mbps CAN FD..".....	1
• Changed the <i>Functional Block Diagram</i> , removed the Dominant time-out box.....	1
• Deleted "Base" from the D and DRB pin images in the <i>Pin Configurations and Functions</i> .....	5
• Deleted "Product Preview" from the DRB pin images in the <i>Pin Configurations and Functions</i> .....	5
• Added Storage temperature range to the <i>Absolute Maximum Ratings</i> table.....	6
• Changed Human Body Model (HBM) From: $\pm 10000$ To: $\pm 16000$ in the <i>ESD Ratings</i> table.....	6
• Changed Charged Device Model (CDM) From: $\pm 750$ To: $\pm 1500$ in the <i>ESD Ratings</i> table.....	6
• Changed TBD to values for the DRB (VSON) Package in the <i>ESD Ratings</i> table.....	6
• Changed $V_{SYM}$ in the <i>DRIVER ELECTRICAL CHARACTERISTICS</i> table.....	9
• Changed $V_{SYM\_DC}$ in the <i>DRIVER ELECTRICAL CHARACTERISTICS</i> table.....	9
• Deleted " $V_1 = 0.4 \sin(4E6 \pi t) + 2.5 \text{ V}$ " from the Test Condition of $C_1$ in the <i>RECEIVER ELECTRICAL CHARACTERISTICS</i> table.....	9
• Deleted " $V_1 = 0.4 \sin(4E6 \pi t)$ " from the Test Condition of $C_{ID}$ in the <i>RECEIVER ELECTRICAL CHARACTERISTICS</i> table.....	9
• Added " $-30 \text{ V} \leq V_{CM} \leq +30$ " to the Test Condition of $R_{ID}$ and $R_{IN}$ in the <i>RECEIVER ELECTRICAL CHARACTERISTICS</i> table.....	9
• Changed the <i>Functional Block Diagram</i> , removed the Dominant time-out box.....	18
• Changed <a href="#">Table 8-2</a> , BUS OUTPUT colum.....	20

### Changes from Revision B (May 2016) to Revision C (August 2016) Page

• Added devices: TCAN1051, TCAN1051G, TCAN1051GV, and TCAN1051V.....	1
• Changed <i>Feature</i> From: Added Bus Fault Protection: $\pm 70 \text{ V}$ To: Bus Fault Protection: $\pm 58 \text{ V}$ (non-H variants) and $\pm 70 \text{ V}$ (H variants).....	1

- Added *Feature* "Available in SOIC(8) package and leadless VSON(8) package..." ..... 1
- Changed "D Package for (HV) and (HGV)" To: "DRB Package for (HV) and (HGV)" ..... 5

---

**Changes from Revision A (April 2016) to Revision B (May 2016) Page**

- Added the VSON (8) pin package to the *Device Information* table..... 1
- Added the VSON (8) pin package to the *Pin Configuration and Functions* ..... 5
- Added  $V_{(Diff)}$  to the [Section 6.1](#) table ..... 6
- Added the DRB package to the *Thermal Information* table ..... 8

---

**Changes from Revision \* (March 2016) to Revision A (April 2016) Page**

- Changed the device status From: Product Preview To: Production ..... 1
-

## Device Comparison Table

DEVICE NUMBER	BUS FAULT PROTECTION	5-Mbps FLEXIBLE DATA RATE	3-V LEVEL SHIFTER INTEGRATED	PIN 8 MODE SELECTION
TCAN1051 (Base)	±58 V			Silent Mode
TCAN1051G	±58 V	X		
TCAN1051GV	±58 V	X	X	
TCAN1051V	±58 V		X	
TCAN1051H	±70 V			
TCAN1051HG	±70 V	X		
TCAN1051HGV	±70 V	X	X	
TCAN1051HV	±70 V		X	

## 5 Pin Configuration and Functions

**Figure 5-1. D Package for (H), (G) and (HG) Devices 8 PIN (SOIC) Top View**

**Figure 5-2. DRB Package for Base, (H), (G), and (HG) Devices 8 PIN (VSON) Top View**

**Figure 5-3. D Package for (V), (GV), (HV) and (HGV) Devices 8 PIN (SOIC) Top View**

**Figure 5-4. DRB Package for (V), (GV), (HV) and (HGV) Devices 8 PIN (VSON) Top View**

**Table 5-1. Pin Functions**

NAME	PINS		TYPE	DESCRIPTION
	(H), (G), (HG)	(V), (GV), (HV), (HGV)		
TXD	1	1	DIGITAL INPUT	CAN transmit data input (LOW for dominant and HIGH for recessive bus states)
GND <sup>(1)</sup>	2	2	GND	Ground connection
VCC	3	3	POWER	Transceiver 5-V supply voltage
RXD	4	4	DIGITAL OUTPUT	CAN receive data output (LOW for dominant and HIGH for recessive bus states)
NC	5	—	—	No Connect
V <sub>IO</sub>	—	5	POWER	Transceiver I/O level shifting supply voltage (Devices with "V" suffix only)
CANL	6	6	BUS I/O	Low level CAN bus input/output line
CANH	7	7	BUS I/O	High level CAN bus Input/output line
S	8	8	DIGITAL INPUT	Silent Mode control input (active high)

(1) For DRB (VSON) package options, the thermal pad may be connected to GND in order to optimize the thermal characteristics of the package.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup> <sup>(2)</sup>

			MIN	MAX	UNIT
V <sub>CC</sub>	5-V Bus Supply Voltage Range	All Devices	-0.3	7	V
V <sub>IO</sub>	I/O Level-Shifting Voltage Range	Devices with the "V" Suffix	-0.3	7	V
V <sub>BUS</sub>	CAN Bus I/O voltage range (CANH, CANL)	Devices without the "H" Suffix	-58	58	V
V <sub>(Diff)</sub>	Max differential voltage between CANH and CANL	Devices without the "H" suffix	-58	58	V
V <sub>BUS</sub>	CAN Bus I/O voltage range (CANH, CANL)	Devices with the "H" Suffix	-70	70	V
V <sub>(Diff)</sub>	Max differential voltage between CANH and CANL	Devices with the "H" suffix	-70	70	V
V <sub>(Logic_Input)</sub>	Logic input terminal voltage range (TXD, S)	All Devices	-0.3	+7 and V <sub>I</sub> ≤ V <sub>IO</sub> + 0.3	V
V <sub>(Logic_Output)</sub>	Logic output terminal voltage range (RXD)		-0.3	+7 and V <sub>I</sub> ≤ V <sub>IO</sub> + 0.3	V
I <sub>O(RXD)</sub>	RXD (Receiver) output current		-8	8	mA
T <sub>J</sub>	Virtual junction temperature range (see <a href="#">Section 6.5</a> )		-55	150	°C
T <sub>STG</sub>	Storage temperature range (see <a href="#">Section 6.5</a> )		-65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated condition for extended periods may affect device reliability.
- (2) All voltage values, except differential I/O bus voltages, are with respect to ground terminal.

### 6.2 ESD Ratings

	TEST CONDITIONS	VALUE	UNIT
<b>D (SOIC) Package</b>			
Human Body Model (HBM) ESD stress voltage	All terminals <sup>(1)</sup>	±6000	V
	CAN bus terminals (CANH, CANL) to GND <sup>(2)</sup>	±16000	
Charged Device Model (CDM) ESD stress voltage	All terminals <sup>(3)</sup>	±1500	V
Machine Model	All terminals <sup>(4)</sup>	±200	V
<b>DRB (VSON) Package</b>			
Human Body Model (HBM) ESD stress voltage	All terminals <sup>(1)</sup>	±6000	V
	CAN bus terminals (CANH, CANL) to GND <sup>(2)</sup>	±16000	
Charged Device Model (CDM) ESD stress voltage	All terminals <sup>(3)</sup>	±1500	V
Machine Model	All terminals <sup>(4)</sup>	±200	V

- (1) Tested in accordance to JEDEC Standard 22, Test Method A114.
- (2) Test method based upon JEDEC Standard 22 Test Method A114, CAN bus is stressed with respect to GND.
- (3) Tested in accordance to JEDEC Standard 22, Test Method C101.
- (4) Tested in accordance to JEDEC Standard 22, Test Method A115.

### 6.3 ESD Ratings, Specifications

	TEST CONDITIONS		VALUE	UNIT
<b>D (SOIC) Package</b>				
System Level Electro-Static Discharge (ESD)	CAN bus terminals (CANH, CANL) to GND	IEC 61000-4-2: Unpowered Contact Discharge	±15000	V
		IEC 61000-4-2: Powered Contact Discharge	±8000	
System Level Electrical fast transient (EFT)	CAN bus terminals (CANH, CANL) to GND	IEC 61000-4-4: Criteria A	±4000	V
<b>DRB (VSON) Package</b>				
System Level Electro-Static Discharge (ESD)	CAN bus terminals (CANH, CANL) to GND	IEC 61000-4-2: Unpowered Contact Discharge	±14000	V
		IEC 61000-4-2: Powered Contact Discharge	±8000	
System Level Electrical fast transient (EFT)	CAN bus terminals (CANH, CANL) to GND	IEC 61000-4 Criteria A	±4000	V

## 6.4 Recommended Operating Conditions

		MIN	MAX	UNIT
V <sub>CC</sub>	5-V Bus Supply Voltage Range	4.5	5.5	V
V <sub>IO</sub>	I/O Level-Shifting Voltage Range	2.8	5.5	
I <sub>OH</sub> (RXD)	RXD terminal HIGH level output current	-2	2	mA
I <sub>OL</sub> (RXD)	RXD terminal LOW level output current			

## 6.5 Thermal Information

Thermal Metric <sup>(1)</sup>		TEST CONDITIONS	TCAN1051-Q1		
			D (SOIC)	DRB (VSON)	Unit
			8 Pins	8 Pins	
R <sub>θJA</sub>	Junction-to-air thermal resistance	High-K thermal resistance	105.8	40.2	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance		46.8	49.7	°C/W
R <sub>θJC(TOP)</sub>	Junction-to-case (top) thermal resistance		48.3	15.7	°C/W
Ψ <sub>JT</sub>	Junction-to-top characterization parameter		8.7	0.6	°C/W
Ψ <sub>JB</sub>	Junction-to-board characterization parameter		46.2	15.9	°C/W
T <sub>TSD</sub>	Thermal shutdown temperature		170	170	°C
T <sub>TSD_HYS</sub>	Thermal shutdown hysteresis		5	5	°C

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.6 Power Rating

PARAMETER		TEST CONDITIONS	POWER DISSIPATION	UNIT
P <sub>D</sub>	Average power dissipation	V <sub>CC</sub> = 5 V, V <sub>IO</sub> = 5 V (if applicable), T <sub>J</sub> = 27°C, R <sub>L</sub> = 60 Ω, S at 0 V, Input to TXD at 250 kHz, C <sub>L,RXD</sub> = 15 pF. Typical CAN operating conditions at 500 kbps with 25% transmission (dominant) rate.	52	mW
		V <sub>CC</sub> = 5.5 V, V <sub>IO</sub> = 5.5 V (if applicable), T <sub>J</sub> = 150°C, R <sub>L</sub> = 50 Ω, S at 0 V, Input to TXD at 500 kHz, C <sub>L,RXD</sub> = 15 pF. Typical high load CAN operating conditions at 1 Mbps with 50% transmission (dominant) rate and loaded network.	124	mW

## 6.7 Electrical Characteristics

Over recommended operating conditions,  $T_A = -55^\circ\text{C}$  to  $125^\circ\text{C}$  (unless otherwise noted).

PARAMETER		TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT	
<b>Supply Characteristics</b>							
$I_{CC}$	5-V Supply current	Normal mode (dominant)	See Figure 7-1, TXD = 0 V, $R_L = 60\ \Omega$ , $C_L =$ open, $R_{CM} =$ open, S = 0V	40	70	mA	
			See Figure 7-1, TXD = 0 V, $R_L = 50\ \Omega$ , $C_L =$ open, $R_{CM} =$ open, S = 0V	45	80		
		Normal mode (dominant – bus fault)	See Figure 7-1, TXD = 0 V, S = 0V, CANH = -12V, $R_L =$ open, $C_L =$ open, $R_{CM} =$ open		180		
		Normal mode (recessive)	See Figure 7-1, TXD = $V_{CC}$ , $R_L = 50\ \Omega$ , $C_L =$ open, $R_{CM} =$ open, S = 0V	1.5	2.5		
		Silent mode	See Figure 7-1, TXD = $V_{CC}$ , $R_L = 50\ \Omega$ , $C_L =$ open, $R_{CM} =$ open, S = $V_{CC}$	1.5	2.5		
$I_{IO}$	I/O supply current	Normal and Silent modes	RXD Floating, TXD = S = 0 or 5.5 V	90	300	$\mu\text{A}$	
$UV_{VCC}$	Rising undervoltage detection on $V_{CC}$ for protected mode		All devices	4.2	4.4	V	
	Falling undervoltage detection on $V_{CC}$ for protected mode			3.8	4.0		4.25
$V_{HYS(UV_{VCC})}$	Hysteresis voltage on $UV_{VCC}$				200		mV
$UV_{VIO}$	Undervoltage detection on $V_{IO}$ for protected mode			Devices with the "V" Suffix (I/O level-shifting)	1.3	2.75	V
$V_{HYS(UV_{VIO})}$	Hysteresis voltage on $UV_{VIO}$ for protected mode			80		mV	
<b>S Terminal (Mode Select Input)</b>							
$V_{IH}$	High-level input voltage	Devices with the "V" suffix (I/O level-shifting)		0.7 x $V_{IO}$		V	
		Devices without the "V" suffix (5-V only)		2			
$V_{IL}$	Low-level input voltage	Devices with the "V" suffix (I/O level-shifting)		0.3 x $V_{IO}$			
		Devices without the "V" suffix (5-V only)		0.8			
$I_{IH}$	High-level input leakage current	S = $V_{CC}$ or $V_{IO} = 5.5\ \text{V}$			30	$\mu\text{A}$	
$I_{IL}$	Low-level input leakage current	S = 0 V, $V_{CC} = V_{IO} = 5.5\ \text{V}$		-2	0		2
$I_{kg(OFF)}$	Unpowered leakage current	S = 5.5 V, $V_{CC} = V_{IO} = 0\ \text{V}$		-1			1
<b>TXD Terminal (CAN Transmit Data Input)</b>							
$V_{IH}$	High-level input voltage	Devices with the "V" suffix (I/O level-shifting)		0.7 x $V_{IO}$		V	
		Devices without the "V" suffix (5-V only)		2			
$V_{IL}$	Low-level input voltage	Devices with the "V" suffix (I/O level-shifting)		0.3 x $V_{IO}$			
		Devices without the "V" suffix (5-V only)		0.8			
$I_{IH}$	High-level input leakage current	TXD = $V_{CC} = V_{IO} = 5.5\ \text{V}$		-2.5	0	1	
$I_{IL}$	Low-level input leakage current	TXD = 0 V, $V_{CC} = V_{IO} = 5.5\ \text{V}$		-100	-25	-7	
$I_{kg(OFF)}$	Unpowered leakage current	TXD = 5.5 V, $V_{CC} = V_{IO} = 0\ \text{V}$		-1	0	1	
$C_i$	Input capacitance	$V_{IN} = 0.4 * \sin(4E6 * \pi * t) + 2.5\ \text{V}$			5	pF	

Over recommended operating conditions,  $T_A = -55^\circ\text{C}$  to  $125^\circ\text{C}$  (unless otherwise noted).

PARAMETER		TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT	
<b>RXD Terminal (CAN Receive Data Output)</b>							
$V_{OH}$	High-level output voltage	Devices with the "V" suffix (I/O level-shifting), See <a href="#">Figure 7-2</a> , $I_O = -2\text{ mA}$	$0.8 \times V_{IO}$			V	
		Devices without the "V" suffix (5-V only), See <a href="#">Figure 7-2</a> , $I_O = -2\text{ mA}$	4	4.6			
$V_{OL}$	Low-level output voltage	Devices with the "V" suffix (I/O level-shifting), See <a href="#">Figure 7-2</a> , $I_O = +2\text{ mA}$	$0.2 \times V_{IO}$				
		Devices without the "V" suffix (5-V only), See <a href="#">Figure 7-2</a> , $I_O = +2\text{ mA}$		0.2	0.4		
$I_{kg(OFF)}$	Unpowered leakage current	RXD = 5.5 V, $V_{CC} = 0\text{ V}$ , $V_{IO} = 0\text{ V}$	-1	0	1	$\mu\text{A}$	
<b>Driver Electrical Characteristics</b>							
$V_{O(DOM)}$	Bus output voltage (dominant)	CANH	See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-1</a> , TXD = 0 V, S = 0 V, $50\ \Omega \leq R_L \leq 65\ \Omega$ , $C_L = \text{open}$ , $R_{CM} = \text{open}$		2.75	4.5	
		CANL			0.5	2.25	
$V_{O(REC)}$	Bus output voltage (recessive)	CANH and CANL	See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-1</a> , TXD = $V_{CC}$ , $V_{IO} = V_{CC}$ , S = $V_{CC}$ or 0 V <sup>(2)</sup> , $R_L = \text{open}$ (no load), $R_{CM} = \text{open}$		2	$0.5 \times V_{CC}$	3
$V_{OD(DOM)}$	Differential output voltage (dominant)	CANH - CANL	See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-1</a> , TXD = 0 V, S = 0 V, $45\ \Omega \leq R_L < 50\ \Omega$ , $C_L = \text{open}$ , $R_{CM} = \text{open}$		1.4	3	
			See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-1</a> , TXD = 0 V, S = 0 V, $50\ \Omega \leq R_L \leq 65\ \Omega$ , $C_L = \text{open}$ , $R_{CM} = \text{open}$		1.5	3	
			See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-1</a> , TXD = 0 V, S = 0 V, $R_L = 2240\ \Omega$ , $C_L = \text{open}$ , $R_{CM} = \text{open}$		1.5	5	
$V_{OD(REC)}$	Differential output voltage (recessive)	CANH - CANL	See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-1</a> , TXD = $V_{CC}$ , S = 0 V, $R_L = 60\ \Omega$ , $C_L = \text{open}$ , $R_{CM} = \text{open}$		-120	12	
			See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-1</a> , TXD = $V_{CC}$ , S = 0 V, $R_L = \text{open}$ (no load), $C_L = \text{open}$ , $R_{CM} = \text{open}$		-50	50	
$V_{SYM}$	Transient symmetry (dominant or recessive) ( $V_{O(CANH)} + V_{O(CANL)}) / V_{CC}$	See <a href="#">Figure 7-1</a> and <a href="#">Figure 9-2</a> , S at 0 V, $R_{term} = 60\ \Omega$ , $C_{split} = 4.7\ \text{nF}$ , $C_L = \text{open}$ , $R_{CM} = \text{open}$ , $T_{XD} = 250\ \text{kHz}$ , 1 MHz		0.9	1.1	V/V	
$V_{SYM\_DC}$	DC Output symmetry (dominant or recessive) ( $V_{CC} - V_{O(CANH)} - V_{O(CANL)}$ )	See <a href="#">Figure 7-1</a> and <a href="#">Figure 8-2</a> , S = 0 V, $R_L = 60\ \Omega$ , $C_L = \text{open}$ , $R_{CM} = \text{open}$		-0.4	0.4	V	
$I_{OS(SS\_DOM)}$	Short-circuit steady-state output current, dominant	See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-7</a> , <a href="#">Figure 7-7</a> , S at 0 V, $V_{CANH} = -5\text{ V}$ to 40 V, CANH = open, TXD = 0 V		-100		mA	
		See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-7</a> , S at 0 V, $V_{CANL} = -5\text{ V}$ to 40 V, CANH = open, TXD = 0 V		100			
$I_{OS(SS\_REC)}$	Short-circuit steady-state output current, recessive	See <a href="#">Figure 8-2</a> and <a href="#">Figure 7-7</a> , $-27\text{ V} \leq V_{BUS} \leq 32\text{ V}$ , Where $V_{BUS} = \text{CANH} = \text{CANL}$ , TXD = $V_{CC}$ , all modes		-5		5	

Over recommended operating conditions,  $T_A = -55^\circ\text{C}$  to  $125^\circ\text{C}$  (unless otherwise noted).

PARAMETER		TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
<b>Receiver Electrical Characteristics</b>						
$V_{CM}$	Common mode range, normal mode	See Figure 7-2, Table 8-5 and Table 7-1, $S = 0$ or $V_{CC}$ or $V_{IO}$	-30		+30	V
$V_{IT+}$	Positive-going input threshold voltage, all modes	See Figure 7-2, Table 8-5 and Table 7-1, $S = 0$ or $V_{CC}$ or $V_{IO}$ , $-20\text{ V} \leq V_{CM} \leq +20\text{ V}$			900	mV
$V_{IT-}$	Negative-going input threshold voltage, all modes		500			
$V_{IT+}$	Positive-going input threshold voltage, all modes	See Figure 7-2, Table 8-5 and Table 7-1, $S = 0$ or $V_{CC}$ or $V_{IO}$ , $-30\text{ V} \leq V_{CM} \leq +30\text{ V}$			1000	
$V_{IT-}$	Negative-going input threshold voltage, all modes		400			
$V_{HYS}$	Hysteresis voltage ( $V_{IT+} - V_{IT-}$ )	See Figure 7-2, Table 8-5 and Table 7-1, $S = 0$ or $V_{CC}$ or $V_{IO}$		120		mV
$I_{kg(OFF)}$	Power-off (unpowered) bus input leakage current	$CANH = CANL = 5\text{ V}$ , $V_{CC} = V_{IO} = 0\text{ V}$			4.8	$\mu\text{A}$
$C_I$	Input capacitance to ground (CANH or CANL)	$TXD = V_{CC}$ , $V_{IO} = V_{CC}$		24	30	pF
$C_{ID}$	Differential input capacitance	$TXD = V_{CC}$ , $V_{IO} = V_{CC}$		12	15	pF
$R_{ID}$	Differential input resistance	$TXD = V_{CC} = V_{IO} = 5\text{ V}$ , $S = 0\text{ V}$ , $-30\text{ V} \leq V_{CM} \leq +30\text{ V}$	30		80	k $\Omega$
$R_{IN}$	Input resistance (CANH or CANL)		15		40	k $\Omega$
$R_{IN(M)}$	Input resistance matching: [ $1 - R_{IN(CANH)} / R_{IN(CANL)}$ ] $\times$ 100%	$V_{CANH} = V_{CANL} = 5\text{ V}$	-2%		+2%	

- (1) All typical values are at  $25^\circ\text{C}$  and supply voltages of  $V_{CC} = 5\text{ V}$  and  $V_{IO} = 5\text{ V}$ ,  $R_L = 60\ \Omega$ .
- (2) For the bus output voltage (recessive) will be the same if the device is in Normal mode with S terminal LOW or if the device is in Silent mode with the S terminal is HIGH.

## 6.8 Switching Characteristics

## 8 Detailed Description

### 8.1 Overview

These CAN transceivers meet the ISO11898-2 (2016) High Speed CAN (Controller Area Network) physical layer standard. They are designed for data rates in excess of 1 Mbps for CAN FD and enhanced timing margin / higher data rates in long and highly-loaded networks. These devices provide many protection features to enhance device and CAN robustness.

### 8.2 Functional Block Diagram

## 8.3 Feature Description

### 8.3.1 TXD Dominant Timeout (DTO)

During normal mode (the only mode where the CAN driver is active), the TXD DTO circuit prevents the transceiver from blocking network communication in the event of a hardware or software failure where TXD is held dominant longer than the timeout period  $t_{TXD\_DTO}$ . The DTO circuit timer starts on a falling edge on TXD. The DTO circuit disables the CAN bus driver if no rising edge is seen before the timeout period expires. This frees the bus for communication between other nodes on the network. The CAN driver is re-activated when a recessive signal is seen on the TXD terminal, thus clearing the TXD DTO condition. The receiver and RXD terminal still reflect activity on the CAN bus, and the bus terminals are biased to the recessive level during a TXD dominant timeout.

**Figure 8-1. Example Timing Diagram for TXD DTO**

#### Note

The minimum dominant TXD time allowed by the TXD DTO circuit limits the minimum possible transmitted data rate of the device. The CAN protocol allows a maximum of eleven successive dominant bits (on TXD) for the worst case, where five successive dominant bits are followed immediately by an error frame. This, along with the  $t_{TXD\_DTO}$  minimum, limits the minimum data rate. Calculate the minimum transmitted data rate by: Minimum Data Rate =  $11 / t_{TXD\_DTO}$ .

### 8.3.2 Thermal Shutdown (TSD)

If the junction temperature of the device exceeds the thermal shutdown threshold ( $T_{TSD}$ ), the device turns off the CAN driver circuits thus blocking the TXD-to-bus transmission path. The CAN bus terminals are biased to the recessive level during a thermal shutdown, and the receiver-to-RXD path remains operational. The shutdown condition is cleared when the junction temperature drops at least the thermal shutdown hysteresis temperature ( $T_{TSD\_HYS}$ ) below the thermal shutdown temperature ( $T_{TSD}$ ) of the device.

### 8.3.3 Undervoltage Lockout

The supply terminals have undervoltage detection that places the device in protected mode. This protects the bus during an undervoltage event on either the  $V_{CC}$  or  $V_{IO}$  supply terminals.

**Table 8-1. Undervoltage Lockout 5 V Only Devices (Devices without the "V" Suffix)**

$V_{CC}$	DEVICE STATE <sup>(1)</sup>	BUS OUTPUT	RXD
$> UV_{VCC}$	Normal	Per TXD	Mirrors Bus <sup>(2)</sup>
$< UV_{VCC}$	Protected	High Impedance	High Impedance

- (1) See the  $V_{IT}$  section of the Electrical Characteristics.  
 (2) Mirrors bus state: low if CAN bus is dominant, high if CAN bus is recessive.

**Table 8-2. Undervoltage Lockout I/O Level Shifting Devices (Devices with the "V" Suffix)**

$V_{CC}$	$V_{IO}$	DEVICE STATE	BUS OUTPUT	RXD
$> UV_{VCC}$	$> UV_{VIO}$	Normal	Per TXD	Mirrors Bus <sup>(1)</sup>
$< UV_{VCC}$	$> UV_{VIO}$	Protected	High Impedance	High (Recessive)
$> UV_{VCC}$	$< UV_{VIO}$	Protected	High Impedance	High Impedance
$< UV_{VCC}$	$< UV_{VIO}$	Protected	High Impedance	High Impedance

- (1) Mirrors bus state: low if CAN bus is dominant, high if CAN bus is recessive.

#### Note

After an undervoltage condition is cleared and the supplies have returned to valid levels, the device typically resumes normal operation within 50  $\mu$ s.

### 8.3.4 Unpowered Device

The device is designed to be 'ideal passive' or 'no load' to the CAN bus if it is unpowered. The bus terminals (CANH, CANL) have extremely low leakage currents when the device is unpowered to avoid loading down the bus. This is critical if some nodes of the network are unpowered while the rest of the of network remains in operation. The logic terminals also have extremely low leakage currents when the device is unpowered to avoid loading down other circuits that may remain powered.

### 8.3.5 Floating Terminals

These devices have internal pull ups on critical terminals to place the device into known states if the terminals float. The TXD terminal is pulled up to  $V_{CC}$  or  $V_{IO}$  to force a recessive input level if the terminal floats. The S terminal is also pulled down to force the device into Normal mode if the terminal floats.

### 8.3.6 CAN Bus Short Circuit Current Limiting

The device has two protection features that limit the short circuit current when a CAN bus line is short-circuit fault condition: driver current limiting (both dominant and recessive states) and TXD dominant state time out to prevent permanent higher short circuit current of the dominant state during a system fault. During CAN communication the bus switches between dominant and recessive states, thus the short circuit current may be viewed either as the instantaneous current during each bus state or as an average current of the two states. For system current (power supply) and power considerations in the termination resistors and common-mode choke ratings, use the average short circuit current. Determine the ratio of dominant and recessive bits by the data in the CAN frame plus the following factors of the protocol and PHY that force either recessive or dominant at certain times:

- Control fields with set bits
- Bit stuffing
- Interframe space
- TXD dominant time out (fault case limiting)

These ensure a minimum recessive amount of time on the bus even if the data field contains a high percentage of dominant bits. The short circuit current of the bus depends on the ratio of recessive to dominant bits and their respective short circuit currents. The average short circuit current may be calculated with the following formula:

$$I_{OS(AVG)} = \%Transmit \times [(\%REC\_Bits \times I_{OS(SS)\_REC}) + (\%DOM\_Bits \times I_{OS(SS)\_DOM})] + [\%Receive \times I_{OS(SS)\_REC}] \quad (1)$$

Where:

- $I_{OS(AVG)}$  is the average short circuit current
- %Transmit is the percentage the node is transmitting CAN messages
- %Receive is the percentage the node is receiving CAN messages
- %REC\_Bits is the percentage of recessive bits in the transmitted CAN messages
- %DOM\_Bits is the percentage of dominant bits in the transmitted CAN messages
- $I_{OS(SS)\_REC}$  is the recessive steady state short circuit current
- $I_{OS(SS)\_DOM}$  is the dominant steady state short circuit current

---

#### Note

Consider the short circuit current and possible fault cases of the network when sizing the power ratings of the termination resistance and other network components.

---

### 8.3.7 Digital Inputs and Outputs

#### 8.3.7.1 5-V $V_{CC}$ Only Devices (Devices without the "V" Suffix):

The 5-V  $V_{CC}$  only devices are supplied by a single 5-V rail. The digital inputs have TTL input thresholds and are therefore 5 V and 3.3 V compatible. The RXD outputs on these devices are driven to the  $V_{CC}$  rail for logic high output. Additionally, the TXD pin is internally pulled up to  $V_{CC}$ , and the S pin is pulled low to GND. The internal bias of the mode pins may only place the device into a known state if the terminals float, they may not be adequate for system-level biasing during transients or noisy environments.

---

#### Note

TXD pull up strength and CAN bit timing require special consideration when these devices are used with CAN controllers with an open-drain TXD output. An adequate external pull up resistor must be used to ensure that the CAN controller output of the microcontroller maintains adequate bit timing to the TXD input.

---

#### 8.3.7.2 5 V $V_{CC}$ with $V_{IO}$ I/O Level Shifting (Devices with the "V" Suffix):

These devices use a 5 V  $V_{CC}$  power supply for the CAN driver and high speed receiver blocks. These transceivers have a second power supply for I/O level-shifting ( $V_{IO}$ ). This supply is used to set the CMOS input thresholds of the TXD and S pins and the RXD high level output voltage. Additionally, the TXD pin is internally pulled up to  $V_{IO}$ , and the S pin is pulled low to GND.

## 8.4 Device Functional Modes

The device has two main operating modes: Normal mode and Silent mode. Operating mode selection is made via the S input terminal.

**Table 8-3. Operating Modes**

S Terminal	MODE	DRIVER	RECEIVER	RXD Terminal
LOW	Normal Mode	Enabled (ON)	Enabled (ON)	Mirrors Bus State <sup>(1)</sup>
HIGH	Silent Mode	Disabled (OFF)	Enabled (ON)	Mirrors Bus State <sup>(1)</sup>

(1) Mirrors bus state: low if CAN bus is dominant, high if CAN bus is recessive.

### 8.4.1 CAN Bus States

The CAN bus has two states during powered operation of the device: *dominant* and *recessive*. A dominant bus state is when the bus is driven differentially, corresponding to a logic low on the TXD and RXD terminal. A recessive bus state is when the bus is biased to  $V_{CC} / 2$  via the high-resistance internal input resistors  $R_{IN}$  of the receiver, corresponding to a logic high on the TXD and RXD terminals.

**Figure 8-2. Bus States (Physical Bit Representation)**

### 8.4.2 Normal Mode

Select the *Normal mode* of device operation by setting S terminal low. The CAN driver and receiver are fully operational and CAN communication is bi-directional. The driver translates a digital input on TXD to a differential output on CANH and CANL. The receiver translates the differential signal from CANH and CANL to a digital output on RXD.

### 8.4.3 Silent Mode

Activate *Silent mode* by setting S terminal high. The CAN driver is disabled, preventing communication from the TXD pin to the CAN bus. The high speed receiver remains active so that CAN bus communication continues to be relayed to the RXD output pin.

## 8.4.4 Driver and Receiver Function Tables

**Table 8-4. Driver Function Table**

DEVICE	INPUTS		OUTPUTS		DRIVEN BUS STATE
	S <sup>(1)</sup>	TXD <sup>(1)(2)</sup>	CANH <sup>(1)</sup>	CANL <sup>(1)</sup>	
All Devices	L or open	L	H	L	Dominant
		H or Open	Z	Z	Recessive
	H	X	Z	Z	Recessive

- (1) H = high level, L = low level, X = irrelevant, Z = common mode (recessive) bias to  $V_{CC} / 2$ . See [CAN Bus States](#) for bus state and common mode bias information.
- (2) Devices have an internal pull up to  $V_{CC}$  or  $V_{IO}$  on TXD terminal. If the TXD terminal is open, the terminal is pulled high and the transmitter remain in recessive (non-driven) state.

**Table 8-5. Receiver Function Table**

DEVICE MODE	CAN DIFFERENTIAL INPUTS $V_{ID} = V_{CANH} - V_{CANL}$	BUS STATE	RXD TERMINAL <sup>(1)</sup>
Normal or Silent	$V_{ID} \geq V_{IT+(MAX)}$	Dominant	L <sup>(2)</sup>
	$V_{IT-(MIN)} < V_{ID} < V_{IT+(MAX)}$	?	? <sup>(2)</sup>
	$V_{ID} \leq V_{IT-(MIN)}$	Recessive	H <sup>(2)</sup>
	Open ( $V_{ID} \approx 0$ V)	Open	H

- (1) H = high level, L = low level, ? = indeterminate.
- (2) See *Receiver Electrical Characteristics* section for input thresholds.

## 9 Application Information Disclaimer

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 9.1 Application Information

These CAN transceivers are typically used in applications with a host microprocessor or FPGA that includes the data link layer portion of the CAN protocol. Below are typical application configurations for both 5 V and 3.3 V microprocessor applications. The bus termination is shown for illustrative purposes.

### 9.2 Typical Applications

Figure 9-1. Typical CAN Bus Application

#### 9.2.1 Design Requirements

##### 9.2.1.1 Bus Loading, Length and Number of Nodes

The ISO 11898-2 Standard specifies a maximum bus length of 40 m and maximum stub length of 0.3 m. However, with careful design, users can have longer cables, longer stub lengths, and many more nodes to a bus. A large number of nodes requires transceivers with high input impedance such as the TCAN1051 family of transceivers.

Many CAN organizations and standards have scaled the use of CAN for applications outside the original ISO 11898-2. They have made system-level trade-offs for data rate, cable length, and parasitic loading of the bus. Examples of some of these specifications are ARINC825, CANopen, DeviceNet and NMEA2000.

The TCAN1051 family is specified to meet the 1.5 V requirement with a 50Ω load, incorporating the worst case including parallel transceivers. The differential input resistance of the TCAN1051 family is a minimum of 30 kΩ. If 100 TCAN1051 family transceivers are in parallel on a bus, this is equivalent to a 300Ω differential load worst case. That transceiver load of 300 Ω in parallel with the 60Ω gives an equivalent loading of 50 Ω. Therefore, the TCAN1051 family theoretically supports up to 100 transceivers on a single bus segment. However, for CAN network design margin must be given for signal loss across the system and cabling, parasitic loadings, network imbalances, ground offsets and signal integrity thus a practical maximum number of nodes is typically much lower. Bus length may also be extended beyond the original ISO 11898 standard of 40 m by careful system design and data rate tradeoffs. For example CANopen network design guidelines allow the network to be up to 1 km with changes in the termination resistance, cabling, less than 64 nodes and significantly lowered data rate.

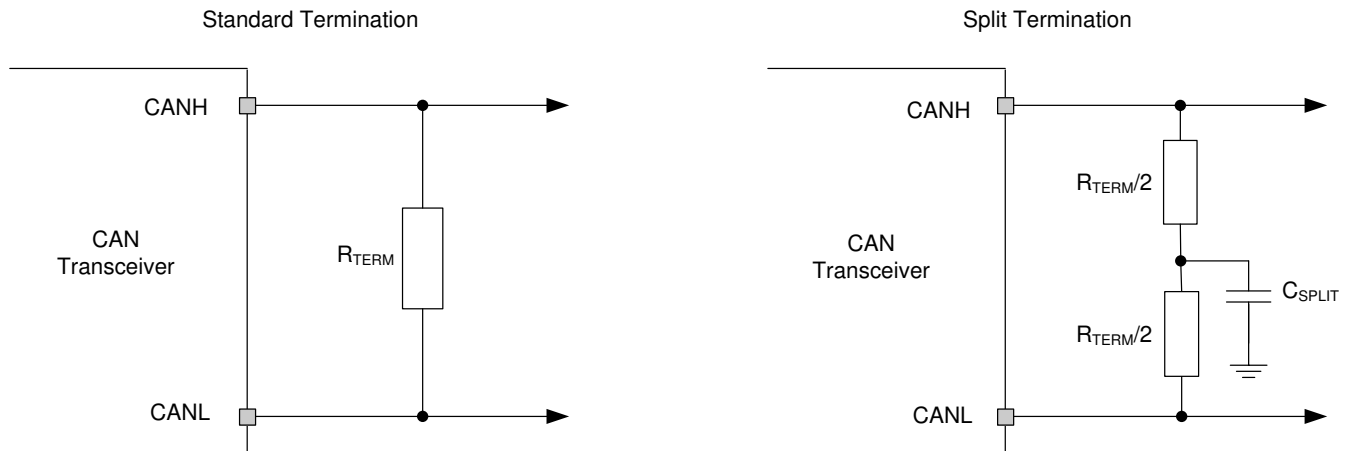

This flexibility in CAN network design is one of the key strengths of the various extensions and additional standards that have been built on the original ISO 11898-2 CAN standard. In using this flexibility comes the responsibility of good network design and balancing these tradeoffs.

## 9.2.2 Detailed Design Procedures

### 9.2.2.1 CAN Termination

The ISO 11898 standard specifies the interconnect to be a twisted pair cable (shielded or unshielded) with 120-Ω characteristic impedance ( $Z_0$ ). Resistors equal to the characteristic impedance of the line should be used to terminate both ends of the cable to prevent signal reflections. Unterminated drop lines (stubs) connecting nodes to the bus should be kept as short as possible to minimize signal reflections. The termination may be on the cable or in a node, but if nodes may be removed from the bus, the termination must be carefully placed so that two terminations always exist on the network.

Termination may be a single 120-Ω resistor at the end of the bus, either on the cable or in a terminating node. If filtering and stabilization of the common mode voltage of the bus is desired, then split termination may be used. (See Figure 9-2). Split termination improves the electromagnetic emissions behavior of the network by eliminating fluctuations in the bus common-mode voltages at the start and end of message transmissions.

Copyright © 2016, Texas Instruments Incorporated

**Figure 9-2. CAN Bus Termination Concepts**

The TCAN1051 family of transceivers have variants for both 5-V only applications and applications where level shifting is needed for a 3.3-V microcontroller.

Figure 9-3. Typical CAN Bus Application Using 5 V CAN Controller

Figure 9-4. Typical CAN Bus Application Using 3.3 V CAN Controller

### 9.2.3 Application Curves

**Figure 9-5. I<sub>CC</sub> Dominant Current over V<sub>CC</sub> Supply Voltage**

## 10 Power Supply Recommendations

These devices are designed to operate from a  $V_{CC}$  input supply voltage range between 4.5 V and 5.5 V. Some devices have an output level shifting supply input,  $V_{IO}$ , designed for a range between 3 V and 5.5 V. Both supply inputs must be well regulated. A bulk capacitance, typically 4.7  $\mu\text{F}$ , should be placed near the CAN transceiver's main  $V_{CC}$  supply output, and in addition a bypass capacitor, typically 0.1  $\mu\text{F}$ , should be placed as close to the device  $V_{CC}$  and  $V_{IO}$  supply terminals. This helps to reduce supply voltage ripple present on the outputs of the switched-mode power supplies and also helps to compensate for the resistance and inductance of the PCB power planes and traces.

## Layout

Robust and reliable bus node design often requires the use of external transient protection device in order to protect against EFT and surge transients that may occur in industrial environments. Because ESD and transients have a wide frequency bandwidth from approximately 3 MHz to 3 GHz, high-frequency layout techniques must be applied during PCB design. The TCAN1051 family comes with high on-chip IEC ESD protection, but if higher levels of system level immunity are desired external TVS diodes can be used. TVS diodes and bus filtering capacitors should be placed as close to the on-board connectors as possible to prevent noisy transient events from propagating further into the PCB and system.

### 11.1 Layout Guidelines

- Place the protection and filtering circuitry as close to the bus connector, J1, to prevent transients, ESD and noise from propagating onto the board. In this layout example a transient voltage suppression (TVS) device, D1, has been used for added protection. The production solution can be either bi-directional TVS diode or varistor with ratings matching the application requirements. This example also shows optional bus filter capacitors C4 and C5. Additionally (not shown) a series common mode choke (CMC) can be placed on the CANH and CANL lines between the transceiver U1 and connector J1.
- Design the bus protection components in the direction of the signal path. Do not force the transient current to divert from the signal path to reach the protection device.
- Use supply ( $V_{CC}$ ) and ground planes to provide low inductance.

---

#### Note

High-frequency currents follows the path of least impedance and not the path of least resistance.

- Use at least two vias for supply ( $V_{CC}$ ) and ground connections of bypass capacitors and protection devices to minimize trace and via inductance.
- Bypass and bulk capacitors should be placed as close as possible to the supply terminals of transceiver, examples are C1, C2 on the  $V_{CC}$  supply and C6 and C7 on the  $V_{IO}$  supply.
- Bus termination: this layout example shows split termination. This is where the termination is split into two resistors, R6 and R7, with the center or split tap of the termination connected to ground via capacitor C3. Split termination provides common mode filtering for the bus. When bus termination is placed on the board instead of directly on the bus, additional care must be taken to ensure the terminating node is not removed from the bus thus also removing the termination. See the application section for information on power ratings needed for the termination resistor(s).
- To limit current of digital lines, serial resistors may be used. Examples are R2, R3, and R4. These are not required.
- Terminal 1: R1 is shown optionally for the TXD input of the device. If an open drain host processor is used, this is mandatory to ensure the bit timing into the device is met.
- Terminal 5: For "V" variants of the TCAN1051 family, bypass capacitors should be placed as close to the pin as possible (example C6 and C7). For device options without  $V_{IO}$  I/O level shifting, this pin is not internally connected and can be left floating or tied to any existing net, for example a split pin connection.
- Terminal 8: is shown assuming the mode terminal, S, will be used. If the device will only be used in normal mode, R4 is not needed and R5 could be used for the pull down resistor to GND.

## 11.2 Layout Example

Figure 11-1. Layout Example

## 11 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

### 11.1 Documentation Support

#### 11.1.1 Related Documentation

### 11.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 11.3 Support Resources

TI E2E™ [support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 11.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 11.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF TCAN1051H, TCAN1051HG, TCAN1051HGV, TCAN1051HV :**

- Automotive : [TCAN1051H-Q1](#), [TCAN1051HG-Q1](#), [TCAN1051HGV-Q1](#), [TCAN1051HV-Q1](#)

NOTE: Qualified Version Definitions:

- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

D0008A

# PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed  $.006$  [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.

# EXAMPLE BOARD LAYOUT

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE  
 EXPOSED METAL SHOWN  
 SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE  
BASED ON .005 INCH [0.125 MM] THICK STENCIL  
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
