

## TLC352 Dual Differential Comparator

### 1 Features

- Single or dual supply operation
- Wide range of supply voltages: 2.7V to 18V
- Very low supply current drain:
  - 150 $\mu$ A typical at 5V
- Built-in ESD protection
- High input impedance: 10<sup>12</sup> $\Omega$  typical
- Extremely low input bias current 5pA typical
- Ultra-stable low input offset voltage
- Common-mode input voltage range includes ground
- Outputs compatible with TTL, MOS, and CMOS
- Pin-compatible with LM393

### 2 Description

This device is fabricated using CMOS technology and consists of two independent voltage comparators, each designed to operate from a single power supply. Operation from dual supplies is also possible if the difference between the two supplies is 2.7V to 18V. Each device features extremely high input impedance (typically greater than 10<sup>12</sup> $\Omega$ ), which allows direct interface to high-impedance sources. The outputs are n-channel open-drain configurations and can be connected to achieve positive-logic wired-AND relationships. The capability of the TLC352 to operate from 2.7V supply makes this device an excellent for low-voltage battery applications.

The TLC352 has internal electrostatic discharge (ESD) protection circuits and is classified with a 2000V ESD rating. However, care must be exercised in handling this device as exposure to ESD can result in degradation of the device parametric performance.

The TLC352C is characterized for operation from 0°C to 70°C. The TLC352I is characterized for operation over the industrial temperature range of -40°C to 85°C.

### Device Information

T <sub>A</sub>	V <sub>IO</sub> max at 25°C	PACKAGE <sup>(1)</sup>
		SMALL-OUTLINE (D)
0°C to 70°C	5mV	TLC352CD
-40°C to 85°C	5mV	TLC352ID

(1) The D packages are available taped and reeled. Add R suffix to device type (like TLC352CDR).

## 3 Pin Configuration and Functions

Figure 3-1. TLC352C, TLC352I D or P Package (Top View)

## 4 Specifications

### 4.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{DD}$	Supply voltage <sup>(2)</sup>		18	V
$V_{ID}$	Differential input voltage <sup>(3)</sup>		$\pm V_{DD}$	V
$V_I$	Input voltage range	-0.3	$V_{DD}$	V
$V_O$	Output voltage		18	V
$I_I$	Input current		$\pm 5$	mA
$I_O$	Output current		20	mA
	Duration of output short circuit to ground <sup>(4)</sup>	Unlimited		
$T_A$	Operating free-air temperature range	TLC352C	0	70
		TLC352I	-40	85
	Storage temperature range		-65	150
	Lead temperature 1.6mm (1/16 inch) from case for 10 seconds	D package		260
		P package		°C

(1) Stresses beyond those listed under "absolute maximum ratings" can cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods can affect device reliability.

(2) All voltage values except differential voltages are with respect to the network ground.

(3) Differential voltages are at IN+ with respect to IN-.

(4) Short circuits from outputs to  $V_{DD}$  can cause excessive heating and eventual device destruction.

### 4.2 Recommended Operating Conditions

		TLC352C		TLC352I		UNIT
		MIN	MAX	MIN	MAX	
$V_{DD}$	Supply voltage	2.7	16	2.7	16	V
$V_{IC}$	Common-mode input voltage	$V_{DD} = 5V$	0	3.5	0	3.5
		$V_{DD} = 10V$	0	8.5	0	8.5
$T_A$	Operating free-air temperature	0	70	-40	85	°C

## 4.3 Electrical Characteristics

at specified free-air temperature,  $V_{DD} = 2.7V$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A$ <sup>(1)</sup>	TLC352C			TLC352I			UNIT
				MIN	TYP	MAX	MIN	TYP	MAX	
$V_{IO}$	Input offset voltage	$V_{IC} = V_{ICR\min}$	25°C	2	5		2	5		mV
			Full range		6.5			7		
$I_{IO}$	Input offset current		25°C	1			1		pA	nA
			MAX		0.3			1		
$I_{IB}$	Input bias current		25°C	5			5		pA	nA
			MAX		0.6			2		
$V_{ICR}$	Common-mode input voltage range		Full range	0 to 1.2			0 to 1.2			V
$V_{OL}$	Low-level output voltage		25°C	100	200		100	200		mV
			Full range		200			200		
$I_{OL}$	Low-level output current	$V_{ID} = -0.5V$	$V_{OL} = 0.3V$	25°C	1	1.6		1	1.6	mA
$I_{DD}$	Supply current (two comparators)	$V_{ID} = 0.5V$	No load	25°C	65	150		65	150	$\mu A$
						200			200	

(1) All characteristics are measured with zero common-mode input voltage unless otherwise noted. Full range is 0°C to 70°C for TLC352C, -40°C to 85°C for TLC352I.

#### 4.4 Electrical Characteristics

at specified free-air temperature,  $V_{DD} = 5V$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A$ (1)	TLC352C			TLC352I			UNIT
				MIN	TYP	MAX	MIN	TYP	MAX	
$V_{IO}$	Input offset voltage	$V_{IC} = V_{ICR\min}$	25°C		1	5		1	5	mV
			Full range			6.5			7	
$I_{IO}$	Input offset current		25°C		1			1		pA
			MAX			0.3			1	nA
$I_{IB}$	Input bias current		25°C		5			5		pA
			MAX			0.6			2	nA
$V_{ICR}$	Common-mode input voltage range		25°C	0 to $V_{DD} - 1$			0 to $V_{DD} - 1$			V
			Full range	0 to $V_{DD} - 1.5$			0 to $V_{DD} - 1.5$			
$I_{OH}$	High-level output current	$V_{ID} = 1V$	$V_{OH} = 5V$	25°C	0.1		0.1			nA
			$V_{OH} = 15V$	Full range	1		1			$\mu A$
$V_{OL}$	Low-level output voltage	$V_{ID} = 1V$	$I_{OL} = 4mA$	25°C	150	400	150	400		mV
				Full range	700		700			
$I_{OL}$	Low-level output current	$V_{ID} = -1V$	$V_{OL} = 1.5V$	25°C	6	16	6	16		mA
$I_{DD}$	Supply current (two comparators)	$V_{ID} = 1V$	No load	25°C	0.15	0.3	0.15	0.3		mA
				Full range	0.4		0.4			

(1) All characteristics are measured with zero common-mode input voltage unless otherwise noted. Full range is 0°C to 70°C for TLC352C, -40°C to 85°C for TLC352I.

#### 4.5 Switching Characteristics

$V_{DD} = 5V$ ,  $T_A = 25^\circ C$

PARAMETER	TEST CONDITIONS	TLC352C, TLC352I			UNIT
		MIN	TYP	MAX	
Response time	$R_L$ connected to 5V through 5.1k $\Omega$ $C_L = 15pF$ (1) (2)	100mV input step with 10mV overdrive		200	ns
		100mV overdrive		100	

(1)  $C_L$  includes probe and jig capacitance  
(2) The response time specified is the interval between the input step function and the instant when the output crosses 1.4V.

## 5 Typical Characteristics

At  $T_A = 25^\circ\text{C}$ ,  $V_S = 12\text{V}$ ,  $V_{CM} = V_S/2\text{V}$ ,  $C_L = 15\text{pF}$ , Input Overdrive = Input Underdrive = 100mV,  $R_{PU} = 10\text{k}\Omega$ , unless otherwise noted.

## 6 Detailed Description

### 6.1 Overview

The TLC352 device is a micro-power comparator with open-drain output. Operating down to 3V while only consuming only 75 $\mu$ A per channel, the TLC372 is excellent for power conscious applications.

### 6.2 Functional Block Diagrams

Figure 6-1. Block Diagram

### 6.3 Feature Description

The TLC372 comparator consists of a CMOS differential pair input, allowing the device to operate with very high gain and fast response with minimal input bias current. The output consists of an open-drain output stage capable of sinking current with a negative differential input voltage.

### 6.4 Device Functional Modes

#### 6.4.1 Input

The TLC3x2 input voltage range extends from V- to 1.5V below V+ over the full temperature range. The differential input voltage ( $V_{ID}$ ) can be any voltage within these limits. No phase-inversion of the comparator output occurs when the input voltages stay within the specified range.

#### 6.4.2 ESD Protection

The TLC3x2 input and output ESD protection contains a conventional diode-type "upper" ESD clamp between the I/O pins and V+, and a "lower" ESD clamp between the I/O pins and V-. The inputs or output must not exceed the supply rails by more than 300mV. TI does not recommend applying signals to the inputs with no supply voltage.

When the inputs are connected to a low impedance source, such as a power supply or buffered reference line, add a current-limiting resistor in series with the input to limit any currents when the clamps conduct. The current must be limited 10mA or less, though TI recommends limiting the current to 1mA or less. This series resistance can be part of any resistive input dividers or networks.

#### 6.4.3 Unused Inputs

If a channel is not to be used, DO NOT tie the inputs together. Due to the high equivalent bandwidth and low offset voltage, tying the inputs directly together can cause high frequency chatter as the device triggers on its own internal wideband noise. Instead, the inputs must be tied to any available voltage that resides within the specified input voltage range and provides a minimum of 50mV differential voltage. For example, one input can be grounded and the other input connected to a reference voltage.

#### 6.4.4 Open-Drain Output

The TLC3x2 features an open-drain (also commonly called open collector) sinking-only output stage enabling the output logic levels to be pulled up to an external voltage from 0V up to 16V, independent of the comparator supply voltage (VDD). The open-drain output allows logical OR'ing of multiple open drain outputs and logic level translation. TI recommends setting the pull-up resistor current to between 100uA and 1mA. Lower value pull-up resistor values can help increase the rising edge rise-time, but at the expense of increasing VOL and higher power dissipation. The rise-time is dependent on the time constant of the total pull-up resistance and total load capacitance. Large value pull-up resistors ( $>1\text{ M}\Omega$ ) creates an exponential rising edge due to the output RC time constant and increase the rise-time.

Directly shorting the output to VDD can result in thermal runaway and eventual device destruction at high ( $>12\text{V}$ ) pull-up voltages. If output shorts are possible, a series current limiting resistor is recommended to limit the power dissipation.

Unused open drain outputs can be left floating, or can be tied to the GND pin if floating pins are not desired.

#### 6.4.5 Hysteresis

The basic comparator configuration can oscillate or produce a noisy "chatter" output if the applied differential input voltage is near the comparator's offset voltage. This typically occurs when the input signal is moving very slowly across the switching threshold of the comparator.

This problem can be prevented by the addition of hysteresis or positive feedback.

The hysteresis transfer curve is shown in [Figure 6-2](#). This curve is a function of three components:  $V_{TH}$ ,  $V_{OS}$ , and  $V_{HYST}$ :

- $V_{TH}$  is the actual set voltage or threshold trip voltage.
- $V_{OS}$  is the internal offset voltage between  $V_{IN+}$  and  $V_{IN-}$ . This voltage is added to  $V_{TH}$  to form the actual trip point at which the comparator must respond to change output states.
- $V_{HYST}$  is the hysteresis (or trip window) that is designed to reduce comparator sensitivity to noise.

**Figure 6-2. Hysteresis Transfer Curve**

For more information, please see Application Note SBOA219 "[Comparator with and without hysteresis circuit](#)".

##### 6.4.5.1 Inverting Comparator With Hysteresis

The inverting comparator with hysteresis requires a three-resistor network that is referenced to the comparator supply voltage ( $V_{CC}$ ), as shown below.

**Figure 6-3. Inverting Configuration With Hysteresis**

The equivalent resistor networks when the output is high and low are shown below.

**Figure 6-4. Inverting Configuration Resistor Equivalent Networks**

When  $V_{IN}$  is less than  $V_A$ , the output voltage is high (for simplicity, assume  $V_O$  switches as high as  $V_{CC}$ ). The three network resistors can be represented as  $R1 \parallel R3$  in series with  $R2$ , as shown above on the left.

The equation below defines the high-to-low trip voltage ( $V_{A1}$ ).

$$V_{A1} = V_{CC} \times \frac{R2}{(R1 \parallel R3) + R2} \quad (1)$$

When  $V_{IN}$  is greater than  $V_A$ , the output voltage is low. In this case, the three network resistors can be presented as  $R2 \parallel R3$  in series with  $R1$ , as shown above on the right.

Use the equation below to define the low to high trip voltage ( $V_{A2}$ ).

$$V_{A2} = V_{CC} \times \frac{R2 \parallel R3}{R1 + (R2 \parallel R3)} \quad (2)$$

The equation below defines the total hysteresis provided by the network.

$$\Delta V_A = V_{A1} - V_{A2} \quad (3)$$

#### 6.4.5.2 Non-Inverting Comparator With Hysteresis

A non-inverting comparator with hysteresis requires a two-resistor network and a voltage reference ( $V_{REF}$ ) at the inverting input, as shown in [Figure 6-5](#).

**Figure 6-5. Non-Inverting Configuration With Hysteresis**

The equivalent resistor networks when the output is high and low are shown in [Figure 6-6](#).

**Figure 6-6. Non-Inverting Configuration Resistor Networks**

When  $V_{IN}$  is less than  $V_{REF}$ , the output is low. For the output to switch from low to high,  $V_{IN}$  must rise above the  $V_{IN1}$  threshold. Use [Equation 4](#) to calculate  $V_{IN1}$ .

$$V_{IN1} = R1 \times \frac{V_{REF}}{R2} + V_{REF} \quad (4)$$

When  $V_{IN}$  is greater than  $V_{REF}$ , the output is high. For the comparator to switch back to a low state,  $V_{IN}$  must drop below  $V_{IN2}$ . Use [Equation 5](#) to calculate  $V_{IN2}$ .

$$V_{IN2} = \frac{V_{REF} (R1 + R2) - V_{CC} \times R1}{R2} \quad (5)$$

The hysteresis of this circuit is the difference between  $V_{IN1}$  and  $V_{IN2}$ , as shown in [Equation 6](#).

$$\Delta V_{IN} = V_{CC} \times \frac{R1}{R2} \quad (6)$$

For more information, please see Application Notes SNOA997 "Inverting comparator with hysteresis circuit" and SBOA313 "Non-Inverting Comparator With Hysteresis Circuit".

## 7 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions.

### 7.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 7.2 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 7.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 7.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 7.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 8 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

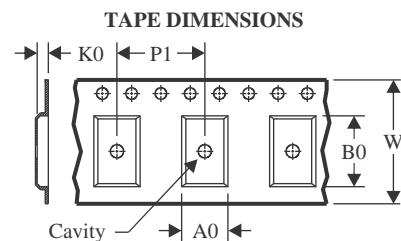

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

---

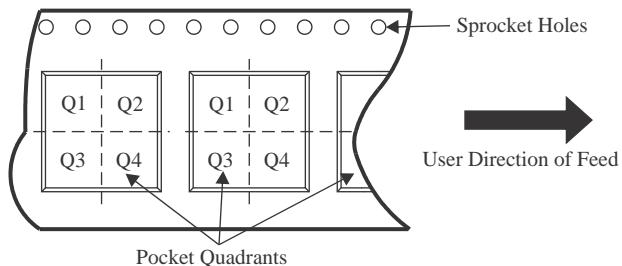

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## NOTES:

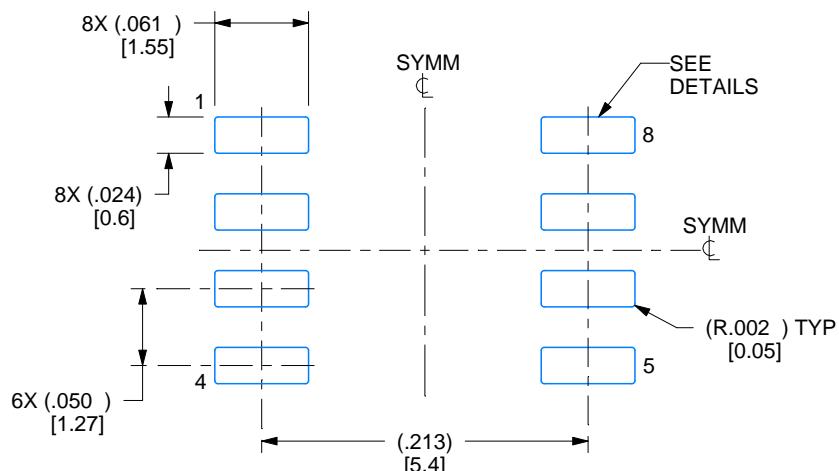

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.

# EXAMPLE BOARD LAYOUT

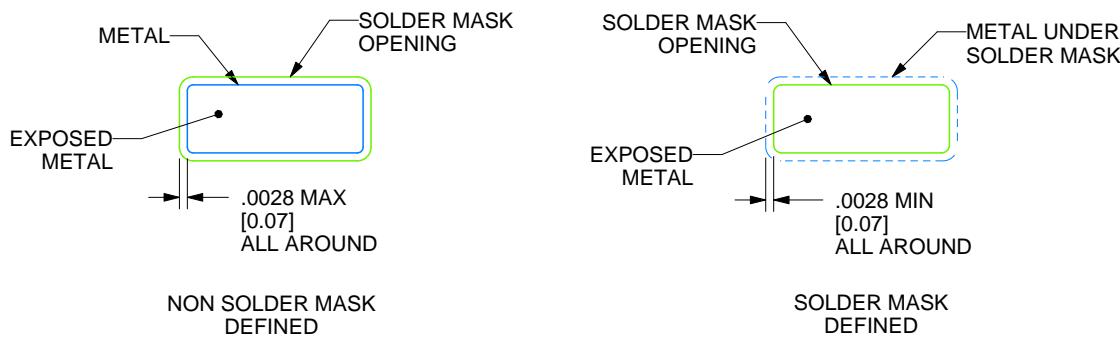

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

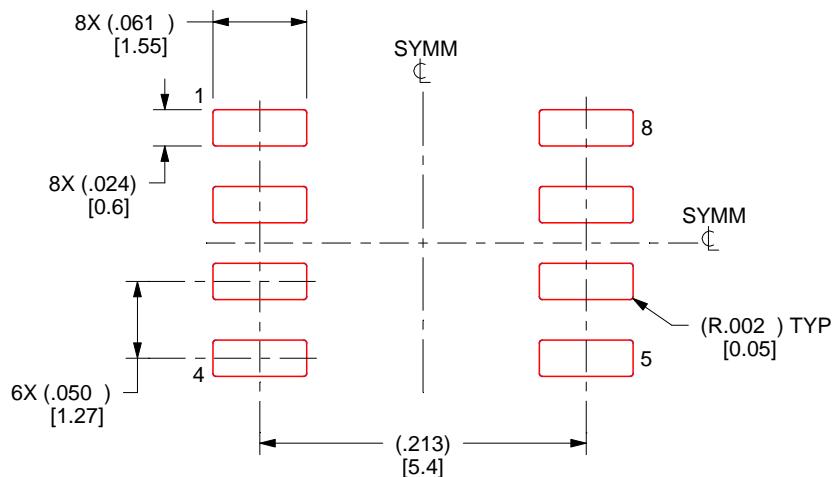

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE  
BASED ON .005 INCH [0.125 MM] THICK STENCIL  
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

NOTES: A. All linear dimensions are in inches (millimeters).  
 B. This drawing is subject to change without notice.  
 C. Falls within JEDEC MS-001 variation BA.

4040082/E 04/2010

# PACKAGE OUTLINE

PW0008A

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

## NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-153, variation AA.

# EXAMPLE BOARD LAYOUT

PW0008A

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

LAND PATTERN EXAMPLE  
SCALE:10X

4221848/A 02/2015

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN
