

# ADS52J6x, 8/4-Channel, 16/14-Bit, 125MSPS, 70mW/Ch for 8-CH ADC With JESD204B Interface

## 1 Features

- 16/14-Bit Resolution, 8/4-Channel ADC
- Idle Signal-to-Noise Ratio (SNR):
  - 80dBFS for 16bit ADC
  - 79dBFS for 14bit ADC
- Power dissipation at 125MSPS, 4CH per Lane:
  - 70mW/Ch for ADS52J65/66 (8CH ADC)
  - 82mW/Ch for ADS52J67/68 (4CH ADC)
- Power dissipation at 62.5MSPS, 8CH per Lane:
  - 45mW/Ch for ADS52J65/66 (8CH ADC)
  - 65mW/Ch for ADS52J67/68 (4CH ADC)
- Full-Scale Input:  $2V_{PP}$
- Full-Scale SNR at  $f_{IN} = 10\text{MHz}$ :
  - 78dBFS for 16bit ADC
  - 77dBFS for 14bit ADC
- Full-Scale SFDR:  $-85\text{dBc}$  at  $f_{in} = 10\text{MHz}$
- Analog Input  $-3\text{dB}$  Bandwidth = 250MHz
- Maximum Input Signal Frequency for  $2V_{PP}$  Input = 130MHz
- Fast and Consistent Overload Recovery
- Advanced Digital Features
  - Automatic DC Offset Correction
  - Digital Average
- Digital I/Q Demodulator
  - Fractional Decimation Filter  $M = 1$  to 63 With Increments of 0.25
  - Data Output Rate Reduction After Decimation
  - Power dissipation at 80MSPS and Decimation = 2
    - 64mW/Ch for ADS52J65/66 (8-CH ADC)
    - 91mW/Ch for ADS52J67/68 (4-CH ADC)
  - On-Chip RAM With 32 Preset Profiles
- JESD204B Subclass 0, 1, and 2
  - 2, 4, or 8 Channels per JESD Lane
  - 10Gbps JESD Interface
  - Supports lane rate up to 12.8Gbps for short trace length ( $< 5$  Inch)
- 64-Pin Non-Magnetic  $9 \times 9\text{mm}$  Package

## 2 Applications

- Medical Imaging: Ultrasound, MRI
- High Frequency Ultrasound
- Non-Destructive Tests (NDT)
- Radar, Lidar, and [Spectroscopy](#)
- Digital Oscilloscopes and Data Acquisition
- Flow cytometry, flow cytometer, Hematology analyze

## 3 Description

The 8/4-channel, 16/14-bit ADS52J6x analog-to-digital converter (ADC) uses CMOS process and remarkable circuit techniques. The device is designed to operate at low power and give very high signal-to-noise ratio (SNR) performance with a  $2\text{-V}_{pp}$  full-scale input. The ADS52J65 device gives 80dBFS idle SNR and 78dBFS full scale SNR at 5MHz. The large input bandwidth of 250MHz makes the device well suited for a wide range of applications, such as high frequency medical ultrasound, magnetic resonance imaging, multi-channel data acquisition, flow cytometry, and hematology analyzer. The ADC integrates an internal reference trimmed to match across devices.

### Device Comparison

Part Number	Resolution	Number of Channels
ADS52J65	16-bit	8
ADS52J66	14-bit	8
ADS52J67	16-bit	4
ADS52J68	14-bit	4

ADS52J6x has advanced digital features, including a digital I/Q demodulator with fractional decimation filter. The ADC data from each channel is encoded using an 8B to 10B format and is sent as a SerDes data stream using current-mode logic (CML) output buffers, as per the JESD204B standard. The ADC data from all eight channels can be output over a single CML buffer (1-lane SerDes) with the data rate limited to a maximum of 12.8Gbps. Using SerDes outputs reduces the number of interface lines. This, together with the low-power design, enables eight channels to be packaged in a  $9\text{mm} \times 9\text{mm}$  VQFN allowing high system integration densities. ADS52J6x also supports modes where all ADC data is sent over four CML buffers (4-Lane SerDes), reducing the SerDes data rate per lane for low-cost FPGAs. The ADS52J6x is available in a non-magnetic VQFN package that does not create any magnetic artifact. The device is specified over  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

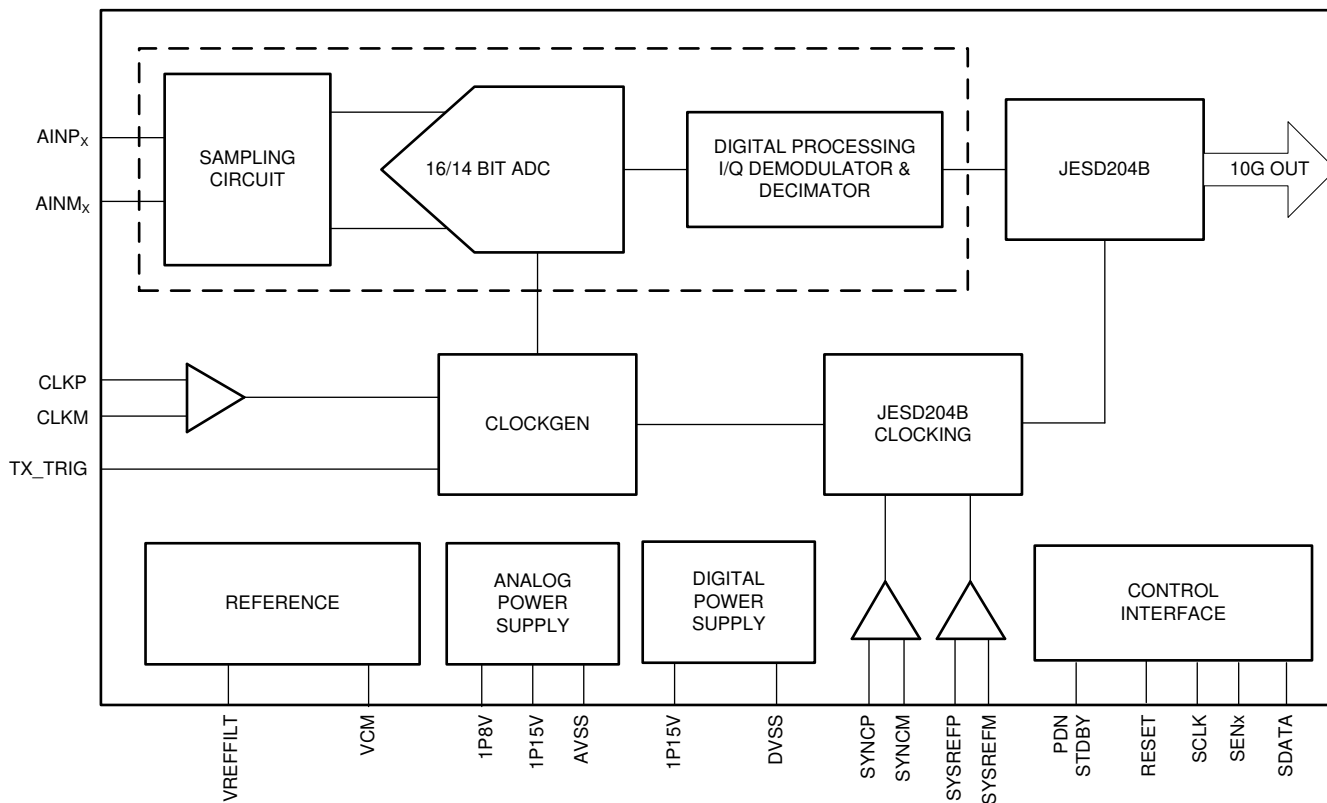

### Device Information

PART NUMBER	PACKAGE <sup>(1)</sup>	PACKAGE SIZE (NOM) <sup>(2)</sup>
ADS52J6x	VQFN (64)	$9.00\text{mm} \times 9.00\text{mm}$

(1) See the orderable addendum at the end of the data sheet.

- (2) The package size (length × width) is a nominal value and includes pins, where applicable.

### 4.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 4.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 4.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.  
All trademarks are the property of their respective owners.

### 4.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 4.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 5 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (June 2020) to Revision B (July 2025)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Added description of 14-bit and 4-channel device parts.....	1

Changes from Revision * (December 2018) to Revision A (June 2020)	Page
• Added <i>Application</i> : Flow cytometry, flow cytometer, Hematology analyze.....	1

- Added text to the first paragraph of the *Description*: flow cytometry, flow cytometer, hematology analyzation.. 1
- 

## 6 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC QUAD FLATPACK - NO LEAD

### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.
