

DRV3220-Q1 Three-Phase Automotive Gate Driver With Enhanced Protection, Diagnostics, and Monitoring

1 Features

- AEC-Q100 Qualified for Automotive Applications:
 - Device Temperature Grade 1: –40°C to +125°C Ambient Operating Temperature
- Three-Phase Bridge Driver for Motor Control
- Suitable for 12-V and 24-V Applications
- Integrated Boost Converter, Gate Drive to 4.75 V
- Drives 6 Separate N-Channel Power MOSFETs
- Strong 1-A Gate Drive for High-Current FETs
- Programmable Dead Time
- PWM Frequency up to 20 kHz
- Supports 100% Duty Cycle Operation
- Short-Circuit Protection
 - VDS-Monitoring (Adjustable Detection Level)
- Overvoltage and Undervoltage Protection
- Overtemperature Warning and Shut Down
- Sophisticated Failure Detection and Handling Through SPI
- System Supervision
 - Q&A Watchdog
 - I/O Supply Monitoring
 - ADREF Monitoring
- Programmable Internal Fault Diagnostics
- Sleep Mode Function
- Thermally-Enhanced 48-Pin HTQFP PowerPAD™ IC Package (7-mm × 7-mm Body)

2 Applications

- Automotive Motor-Control Applications
 - Electrical Power Steering (EPS, EHPS)
 - Electrical Brake and Brake Assist
 - Transmission
 - Pumps
- Industrial Motor-Control Applications

3 Description

The DRV3220-Q1 bridge driver is dedicated to automotive three-phase brushless DC motor control applications. The device provides six dedicated drivers for standard-level N-channel MOSFET transistors. A boost converter with an integrated FET provides the overdrive voltage, allowing full control on the power stages even for low battery voltage down to 4.75 V. The strong driver strength is suitable for high-current applications and programmable to limit peak output current.

The device incorporates robust FET protection and system monitoring functions like a Q&A watchdog and voltage monitors for I/O supplies and ADC reference voltages. Integrated internal diagnostic functions can be accessed and programmed through an SPI interface.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
DRV3220-Q1	HTQFP (48)	7.00 mm × 7.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

5 Pin Configuration and Functions

Pin Functions

PIN		TYPE ⁽¹⁾	DESCRIPTION
NO.	NAME		
1	GLS3	PWR	Gate low-side 3, connected to gate of external power MOSFET.
2	SLS3	PWR	Source low-side 3, connected to external power MOSFET for gate discharge and VDS monitoring.
3	GHS3	PWR	Gate high-side 3, connected to gate of external power MOSFET.
4	SHS3	PWR	Source high-side 3, connected to external power MOSFET for gate discharge and VDS monitoring.
5	VSH	HVI_A	Sense high-side, sensing VS connection of the external power MOSFETs for VDS monitoring.
6	SHS2	PWR	Source high-side 2, connected to external power MOSFET gate discharge and VDS monitoring.
7	GHS2	PWR	Gate high-side 2, connected to gate of external power MOSFET.
8	SLS2	PWR	Source low-side 2, connected to external power MOSFET for gate discharge and VDS monitoring.
9	GLS2	PWR	Gate low-side 2, connected to gate of external power MOSFET.
10	TEST	HVI_A	Test mode input, during normal application connected to ground.

(1) Description of pin type: GND = Ground; HVI_A = High-voltage input analog; HVI_D = High-voltage input digital; LVI_A = Low-voltage input analog; LVO_A = Low-voltage output analog; LVO_D = Low-voltage output digital; NC = No connect; PWR = Power output; Supply = Supply input

Pin Functions (continued)

PIN		TYPE ⁽¹⁾	DESCRIPTION
NO.	NAME		
11	GLS1	PWR	Gate low-side 1, connected to gate of external power MOSFET.
12	SLS1	PWR	Source low-side 1, connected to external power MOSFET for gate discharge and VDS monitoring.
13	GHS1	PWR	Gate high-side 1, connected to gate of external power MOS transistor.
14	SHS1	PWR	Source high-side 1, connected to external power MOS transistor for gate discharge and VDS.
15	VS	Supply	Power-supply voltage (externally protected against reverse battery connection).
16	GNDA	GND	Analog ground.
17	ERR	LVO_D	Error (low active), Error pin to indicate detected error.
18	DRVOFF	HVI_D	Driver OFF (high active), secondary bridge driver disable.
19	RVSET	HVI_A	VDDIO / ADREF OV/UV configuration resistor.
20	BOOST	Supply	Boost output voltage, used as supply for the gate drivers.
21	SW	PWR	Boost converter switching node connected to external coil and external diode.
22	NCS	HVI_D	SPI chip select.
23	GNDLS_B	GND	Boost GND to set current limit. Boost switching current goes through this pin through external resistor to ground.
24	EN	HVI_D	Enable (high active) of the device.
25	VDDIO	Supply	I/O supply voltage, defines the interface voltage of digital I/O, for example, SPI.
26	SCLK	HVI_D	SPI clock.
27	SDO	LVO_D	SPI data output.
28	SDI	HVI_D	SPI data input.
29	VCC3	LVO_A	VCC3 regulator, for internal use only. TI recommends an external decoupling capacitor of 0.1 μ F. External load < 100 μ A.
30	GNDA	GND	Analog ground.
31	NU	—	Not used. Leave this pin open.
32	VCC5	LVO_A	VCC5 regulator, for internal use only. Recommended external decoupling capacitor 1 μ F. External load < 100 μ A.
33	ADREF	LVI_A	ADC reference of MCU. Connect to VDDIO
34	NU	—	Not used. Leave this pin open.
35	NU	—	Not used. Leave this pin open.
36	NU	—	Not used. Leave this pin open.
37	NU	—	Not used. Connect this pin to ground.
38	NU	—	Not used. Connect this pin to ground.
39	NU	—	Not used. Connect this pin to ground.
40	NU	—	Not used. Connect this pin to ground.
41	NU	—	Not used. Connect this pin to ground.
42	NU	—	Not used. Connect this pin to ground.
43	IHS3	HVI_D	High-side input 3, digital input to drive the HS3.
44	IHS2	HVI_D	Input HS 2, digital input to drive the HS2.
45	IHS1	HVI_D	Input HS 1, digital input to drive the HS1.
46	ILS3	HVI_D	Low-side input 3, digital input to drive the LS3.
47	ILS2	HVI_D	Input LS 2, digital input to drive the LS2.
48	ILS1	HVI_D	Input LS 1, digital input to drive the LS1.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾⁽²⁾

POS			MIN	MAX	UNIT
2.1	DC voltage	VS, VSH	–0.3	60	V
2.1a		VS	Negative voltages with minimum serial resistor 5 Ω , $T_A = 25^\circ\text{C}$		V
2.1c			Negative voltages with minimum serial resistor 5 Ω , $T_A = 105^\circ\text{C}$		V
2.1b		VSH	Negative voltages with minimum serial resistor 10 Ω , $T_A = 25^\circ\text{C}$		V
2.1d			Negative voltages with minimum serial resistor 10 Ω , $T_A = 105^\circ\text{C}$		V
2.2A	Gate high-side voltage	GHSx	–9	70	V
2.2B	Source high-side voltage	SHSx	–9	70	V
2.3	Gate-source high-side voltage difference	GHSx-SHSx	Externally driven, internal limited, see position 5.4 in Electrical Characteristics		V
2.4	Gate low-side voltage	GLSx	–9	20	V
2.5	Source low-side voltage	SLSx	–9	7	V
2.6	Gate-source low-side voltage difference	GLSx-SLSx	Externally driven, internal limited, see position 5.5 in Electrical Characteristics		V
2.7	Boost converter	BOOST, SW	–0.3	70	V
2.9	Analog input voltage	VDDIO	–0.3	60	V
2.9a		ADREF	–0.3	60	V
2.11		RVSET	–0.3	60	V
2.10	Digital input voltage	ILSx, IHSx, EN, DRVOFF, SCLK, NCS, SDI	–0.3	60	V
2.13	Difference between GNDA and GNDLS_B	GNDA, GNDLS_B	–0.3	0.3	V
2.20	Maximum slew rate of SHSx pins, SR_{SHS}		–250	250	V/ μs
2.21	Analog and digital output voltages	ERR, SDO, RO	–0.3	6	V
2.22	Unused pins (connect to GND)	TEST	–0.3	0.3	V
2.24	Internal supply voltage	VCC5	–0.3	6	V
2.25		VCC3	–0.3	3.6	V
2.21 A	Forced input and output current	ERR, SDO, RO	–10	10	mA
2.24 A	Short-to-ground current, $I_{VCC5}^{(3)}$	Internal current limit		80	mA
2.26	Short-to-ground current, I_{VCC3}	Limited by VCC5		80	mA
2.27	Driver FET total gate charge (per FET), Q_{gmax}	$VS = 12\text{ V}$, $f_{PWM} = 20\text{ kHz}$, 6 FETs ON/OFF per PWM cycle		200 ⁽⁴⁾	nC
2.28		$VS = 24\text{ V}$, $f_{PWM} = 20\text{ kHz}$, 6 FETs ON/OFF per PWM cycle		100 ⁽⁴⁾	nC

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to network ground terminal, unless specified otherwise.
- (3) I_{VCC5} is not specifying VCC5 output current capability for external load. The allowed external load on VCC5 is specified at position 3.18 in [Recommended Operating Conditions](#).
- (4) The maximum value also depends on PCB thermal design, modulation scheme, and motor operation time.

Absolute Maximum Ratings (continued)

over operating free-air temperature range (unless otherwise noted)⁽¹⁾⁽²⁾

POS		MIN	MAX	UNIT
2.14	Operating virtual junction temperature, T_J	–40	150	°C
2.15	Storage temperature, T_{stg}	–55	165	°C

6.2 ESD Ratings

POS			VALUE	UNIT
2.17	V _(ESD) Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 ⁽¹⁾	All pins	±2000
			Pins 4, 6, and 14	±4000
2.18		Charged-device model (CDM), per AEC Q100-011	All pins	±500
2.19			Corner pins (1, 12, 13, 24, 25, 36, 37, and 48)	±750

(1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

POS				MIN	NOM	MAX	UNIT
3.1	V _{VS}	Supply voltage, normal voltage operation	Full device functionality. Operation at VS = 4.75 V only when coming from higher VS. Minimum VS for startup = 4.85 V	4.75		40	V
3.2	V _{VSLO}	Supply voltage, logic operation	Logic functional (during battery cranking after coming from full device functionality)	4		40	V
3.3	V _{VDDIO}	Supply voltage for digital I/Os		2.97		5.5	V
3.14	V _{CC3}	Internal supply voltage	VS > 4 V, external load current <100 μA, decoupling capacitor typical 0.1 μF	3 ⁽¹⁾		3.3	V
3.17	V _{CC5}	Internal supply voltage	VS > 6 V, external load current < 100 μA, decoupling capacitor typical 1 μF	5.15		5.45	V
3.6A	I _{VSn}	VS quiescent current normal operation (boost converter enabled, drivers not switching)	Boost converter enabled, see and for SHSx/SLSx connections. EN_GDBIAS = 1			22	mA
3.61A			Boost converter enabled, see and for SHSx/SLSx connections. EN_GDBIAS = 0			22.3	mA
3.6B	I _{BOOSTn}	BOOST pin quiescent current normal operation (drivers not switching)	4.75 V < VS < 20 V, T _A = 25°C to 125°C			9	mA
3.62B			4.75 V < VS < 20 V, T _A = −40°C			10	
3.6C			20 < VS < 40 V, T _A = 25°C to 125°C			9.5	
3.6C1			20 < VS < 40 V, T _A = −40°C			10.5	
3.61B	I _{VSn}	VS quiescent additional current normal operation because of RVSET thermal voltage output enabled (boost converter enabled, drivers not switching)	THERMAL_RVSET_EN = 1			0.6	mA
3.6D	I _{BOOST,sw}	BOOST pin additional load current because of switching gate drivers	Excluding FET gate charge current. 20-kHz all gate drivers switching at the same time. EN_GDBIAS = 1			4	mA
3.61D			Excluding FET gate charge current. 20-kHz all gate drivers switching at the same time. EN_GDBIAS = 0			5.4	
3.75	I _{VSq_1}	VS quiescent current shutdown (sleep mode) 1	VS = 14 V, no operation, T _J < 25°C, EN = Low, total leakage current on all supply connected pins			20	μA
3.75a	I _{VSq_2}	VS quiescent current shutdown (sleep mode) 2	VS = 14 V, no operation, T _J < 85°C, EN = Low, total leakage current on all supply connected pins			30	μA
3.15	I _{VCC3}	VCC3 output current	Intended for MCU ADC input	0		100	μA
3.18	I _{VCC5}	VCC5 output current	Intended for MCU ADC input	0		100	μA
3.16	C _{VCC3}	VCC3 decoupling capacitance		0.075	0.1	0.2	μF
3.19	C _{VCC5}	VCC5 decoupling capacitance		0.5	1	1.5	μF
3.4	D	Duty cycle of bridge drivers		0%		100%	
3.5	f _{PWM}	PWM switching frequency		0		22 ⁽¹⁾	kHz

(1) Maximum PWM allowed also depends on maximum operating temperature, FET gate charge current, VS supply voltage, modulation scheme, and PCB thermal design.

Recommended Operating Conditions (continued)

POS			MIN	NOM	MAX	UNIT	
3.8	T _J	Junction temperature	–40		150	°C	
3.9	T _A	Operating ambient free-air temperature	With proper thermal connection		–40	125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		DRV3220-Q1	UNIT
		PHP (HTQFP)	
		48 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	25.7	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	10.3	°C/W
R _{θJB}	Junction-to-board thermal resistance	6	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	0.2	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	5.9	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	0.3	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

over operating temperature T_J = –40°C to 150°C and recommended operating conditions, V_S = 4.75 V to 40 V⁽¹⁾, f_{PWM} < 20 kHz (unless otherwise noted)

POS	PARAMETER		TEST CONDITIONS	MIN		TYP	MAX	UNIT
4.4	ADREF / VDDIO							
4.4.3	I _{ADREF}	ADREF bias current	ADREF = 3.3 V, pin to ground				300	μA
4.4.4	V _{ovadref}	Overvoltage threshold, ADREF	ADREF: 3.3-V setting by RVSET resistor	3.696	3.795		3.894	V
4.4.4a			ADREF: 5-V setting by RVSET resistor	5.6	5.75		5.9	V
4.4.5	V _{uvadref}	Undervoltage threshold, ADREF	ADREF: 3.3-V setting by RVSET resistor	2.706	2.805		2.904	V
4.4.5a			ADREF: 5-V setting by RVSET resistor	4.1	4.25		4.4	V
4.4.7	V _{ovvddio}	Overvoltage threshold, VDDIO	VDDIO: 3.3-V setting by RVSET resistor	3.696	3.795		3.894	V
4.4.7a			VDDIO: 5-V setting by RVSET resistor	5.6	5.75		5.9	V
4.4.8	V _{uvvddio}	Undervoltage threshold, VDDIO	VDDIO: 3.3-V setting by RVSET resistor	2.706	2.805		2.904	V
4.4.8a			VDDIO: 5-V setting by RVSET resistor	4.1	4.25		4.4	V
4.4.10	R _{RVSET33}	RVSET resistance	VDDIO = 3.3 V; ADREF = 3.3-V mode; STAT6 bit[3:0] = 4'b0001	135	150		165	kΩ
4.4.11	R _{RVSET53}		VDDIO = 5 V; ADREF = 3.3-V mode; STAT6 bit[3:0] = 4'b0100	46	51		56.5	kΩ
4.4.12	R _{RVSET35}		VDDIO = 3.3 V; ADREF = 5-V mode; STAT6 bit[3:0] = 4'b1000	13.5	15		16.5	kΩ
4.4.13	R _{RVSET55}		VDDIO = 5 V; ADREF = 5-V mode; STAT6 bit[3:0] = 4'b0010	4.6	5.1		5.65	kΩ
4.4.30	R _{RVSETopen}	RVSET resistor error detection	Open	650				kΩ
4.4.31	R _{RVSETshort}		Short				1.5	
4.4.32	V _{RVSETn40}	RVSET output voltage	–40°C T _J , THERMAL_RVSET_EN = 1	1.67	1.745		1.82	V
4.4.33	V _{RVSET25}		25°C T _J , THERMAL_RVSET_EN = 1	1.445	1.535		1.625	
4.4.34	V _{RVSET125}		125°C T _J , THERMAL_RVSET_EN = 1	1.085	1.195		1.305	
	VCC3 / VCC5 REGULATORS							
4.4.14	VCC3	VCC3 regulator output voltage	VS > 4 V	3	3.15		3.3	V
4.4.15	VCC3 _{UV}	VCC3 regulator undervoltage threshold	VS > 4 V	2.7	2.85		3	V
4.4.16	VCC3 _{OV}	VCC3 regulator overvoltage threshold ⁽²⁾	VS > 4 V	3.3	3.45		3.6	V

(1) Product life time depends on V_S voltage, PCB thermal design, modulation scheme, and motor operation time. The product is designed for 12-V and 24-V battery system.

(2) ADREF / VDDIO overvoltage and undervoltage is set by RVSET.

Electrical Characteristics (continued)

over operating temperature $T_J = -40^{\circ}\text{C}$ to 150°C and recommended operating conditions, $V_S = 4.75\text{ V}$ to $40\text{ V}^{(1)}$, $f_{\text{PWM}} < 20\text{ kHz}$ (unless otherwise noted)

Figure 3. VS Quiescent Current Shutdown

7 Detailed Description

7.1 Overview

The DRV3220-Q1 is designed to control 3-phase brushless DC motors in automotive applications using pulse-width modulation. Three high-side and three low-side gate drivers can be switched individually with low propagation delay. The input logic prevents simultaneous activation of the high-side and low-side driver of the same channel. A configuration and status register can be accessed through a SPI communication interface.

7.2 Functional Block Diagram

Copyright © 2017, Texas Instruments Incorporated

(1) x = 1, 2, 3

(2) y = 1, 2, 3

(3) An external reference voltage (VCC5 or VCC3) cannot be used for ADREF voltage.

7.3 Programming

7.3.1 SPI

The SPI slave interface is used for serial communication with the external SPI master (external MCU). The SPI communication starts with the NCS falling edge and ends with NCS rising edge. The NCS high level keeps the SPI slave interface in reset state, and the SDO output in tri-state.

7.3.1.1 Address Mode Transfer

The address mode transfer is an 8-bit protocol. Both SPI slave and SPI master transmit the MSB first.

NOTE: SPI master (MCU) and SPI slave (DRV3220-Q1) sample received data on the falling SCLK edge and transmit on the rising SCLK edge.

Figure 4. Single 8-Bit SPI Frame/Transfer

After the NCS falling edge, the first word of 7 bits are address bits followed by the RW bit. During first address transfer, the device returns the STAT1 register on SDO.

Each complete 8-bit frame will be processed. If NCS goes high before a multiple of 8 bits is transferred, the bits are ignored.

7.3.1.1.1 SPI Address Transfer Phase

Figure 5. SPI Address Transfer Phase Bits

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Function	ADDR6	ADDR5	ADDR4	ADDR3	ADDR2	ADDR1	ADDR0	RW

ADDR [6:0] Register address

RW Read and write access

RW = 0: Read access. The SPI master performs a read access to selected register. During following SPI transfer, the device returns the requested register read value on SDO, and device interprets SDI bits as a next address transfer.

RW = 1: Write access. The master performs a write access on the selected register. The slave updates the register value during next SPI transfer (if followed immediately) and returns the current register value on SDO.

7.3.1.2 SPI Data Transfer Phase

Figure 6. SPI Data Transfer Phase Bits

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Function	DATA7	DATA6	DATA5	DATA4	ADDR3	DATA2	DATA1	DATA0

DATA [7:0] Data value for write access (8-Bit).

The table shows data value encoding scheme during a write access. It is possible to mix the two access modes (write and read access) during one SPI communication sequence (NCS = 0). The SPI communication can be terminated after single 8-bit SPI transfer by asserting NCS = 1. Device returns STAT1 register (for the very first SPI transfer after power-up) or current register value that was addressed during SPI Transfer Address Phase.

7.3.1.3 Device Data Response

Figure 7. Device Data Response Bits

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Function	REG7	REG6	REG5	REG4	REG3	REG2	REG1	REG0

REG [7:0] Internal register value. All unused bits are set to 0.

Figure 8 shows a complete 16-bit SPI frame. Figure 9, Figure 10, Figure 11, Figure 12, Figure 13, and Figure 14 show the frame examples.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The DRV3220-Q1 is a predriver for automotive applications featuring three-phase brushless DC-motor control. Because this device has a boost regulator for charging high-side gates, it can handle gate charges of 250 nC. A boost converter allows full control on the power-stages even for a low battery voltage down to 4.75 V.

Copyright © 2017, Texas Instruments Incorporated

Figure 16. Typical System – Electrical Power Steering Example

9 Power Supply Recommendations

The device is designed to operate from an input voltage supply range of 4.75 V to 40 V. The protection circuit must be placed for protection against reverse connection.

10 Layout

10.1 Layout Guidelines

Use the following guidelines when designing a PCB for the DRV3220-Q1:

- In addition to the GND pins, the DRV3220-Q1 makes an electrical connection to GND through the PowerPAD. Always check that the PowerPAD has been properly soldered (see [PowerPAD™ Thermally Enhanced Package](#) [SLMA002]).
- The VS bypass capacitors should be placed close to the power supply terminals. See the VS box in [Figure 17](#)
- Place the VCC5 and VCC5 bypass capacitors close to the corresponding pins with a low impedance path to the ground plane pin (pin 16). See the VCC3 VCC5 bypass box in [Figure 17](#).
- AGND should all be tied to the ground plane through a low impedance trace or copper fill.
- Add stitching vias to reduce the impedance of the GND path from the top to bottom side.
- Try to clear the space around and below the DRV3220-Q1 to allow for better heat spreading from the PowerPAD.
- Keep the BOOST components close to the device and current loops small. See the BOOST boxes in [Figure 17](#).
- Place the GNDLS_B resistor close to the device pin. See the GNDLS_B box in [Figure 17](#).

10.2 Layout Example

Figure 17. Layout Schematic

11.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

11.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

11.4 Trademarks

PowerPAD, E2E are trademarks of Texas Instruments.
All other trademarks are the property of their respective owners.

11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

- ⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).
- ⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.
- ⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.
- ⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
- ⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.
- ⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant

PACKAGE OUTLINE

PLASTIC QUAD FLATPACK

4229966/A 09/2023

NOTES:

PowerPAD is a trademark of Texas Instruments.

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEDEC registration MS-026.
5. Feature may not be present.

SOLDER MASK DETAILS

4229966/A 09/2023

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
8. This package is designed to be soldered to a thermal pad on the board. See technical brief, Powerpad thermally enhanced package, Texas Instruments Literature No. SLMA002 (www.ti.com/lit/slma002) and SLMA004 (www.ti.com/lit/slma004).
9. Vias are optional depending on application, refer to device data sheet. It is recommended that vias under paste be filled, plugged or tented.
10. Size of metal pad may vary due to creepage requirement.

0.150	4.72 X 4.72
0.175	4.37 X 4.37

4229966/A 09/2023

NOTES: (continued)

11. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
12. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.
