

INA141 Precision, Low-Power, $G = 10\text{V/V}$ or 100V/V Instrumentation Amplifier

1 Features

- Low offset voltage:
 - $50\mu\text{V}$ maximum at $G = 100\text{V/V}$
- Low drift:
 - $0.5\mu\text{V}/^\circ\text{C}$ maximum at $G = 100\text{V/V}$
- Accurate gain:
 - $\pm 0.05\%$ at $G = 10\text{V/V}$
- Low input bias current:
 - 5nA , maximum
- High CMR:
 - 117dB , minimum
- Inputs protected to $\pm 40\text{V}$
- Wide supply range: $\pm 2.25\text{V}$ to $\pm 18\text{V}$
- Low quiescent current: $750\mu\text{A}$

2 Applications

- [Temperature transmitter](#)
- [Medical instrumentation](#)
- [Data acquisition \(DAQ\)](#)
- [Process analytics \(pH, gas, concentration, force and humidity\)](#)

3 Description

The INA141 is a low power, general-purpose instrumentation amplifier offering excellent accuracy. The versatile three-op-amp design and small size make this device an excellent choice for a wide range of applications. Current-feedback input circuitry provides wide bandwidth even at high gain (200 kHz at $G = 100\text{ V/V}$).

Simple pin connections set an accurate gain of 10 V/V or 100 V/V without external resistors. Internal input protection can withstand up to $\pm 40\text{ V}$ without damage.

The INA141 is laser trimmed for very low offset voltage ($50\mu\text{V}$), drift ($0.5\mu\text{V}/^\circ\text{C}$) and high common-mode rejection (117 dB at $G = 100\text{ V/V}$). The device operates with power supplies as low as $\pm 2.25\text{ V}$, and quiescent current is only $750\mu\text{A}$.

The INA141 is available in an 8-pin SOIC package, and is specified for the -40°C to $+85^\circ\text{C}$ temperature range.

Package Information

PART NUMBER	PACKAGE ⁽¹⁾	PACKAGE SIZE ⁽²⁾
INA141	D (SOIC, 8)	4.9mm × 6mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

(2) The package size (length × width) is a nominal value and includes pins, where applicable.

5 Specifications

Note

TI has qualified multiple fabrication flows for this device. Differences in performance are labeled by chip site origin (CSO). For system robustness, designing for all flows is highly recommended. For more information, please see [Section 8.1](#).

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

			MIN	MAX	UNIT
V _S	Supply voltage	Dual supply, V _S = (V+) – (V–)		±18	V
		Single supply, V _S = (V+) – 0 V		36	
	Input voltage			±40	V
	Output short-circuit (to ground) ⁽²⁾		Continuous		
T _A	Operating temperature		–40	125	°C
T _{stg}	Storage temperature		–40	125	°C
T _J	Junction temperature			150	°C
	Lead temperature (soldering, 10 s)			300	°C

(1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

(2) Short-circuit to V_S / 2.

5.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
		Charged-device model (CDM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾	±250	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	TYP	MAX	UNIT
V _S	Supply voltage	Single-supply	4.5	30	36	V
		Dual-supply	±2.25	±15	±18	
T _A	Specified temperature		–40		85	°C

6 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

6.1 Application Information

Figure 6-1 shows the basic connections required for operation of the INA141. Applications with noisy or high impedance power supplies can require decoupling capacitors close to the device pins as shown.

Figure 6-1. Basic Connections.

The output is referred to the output reference (Ref) pin, which is normally grounded. This connection must be low-impedance to maintain good common-mode rejection. A resistance of 8 Ω in series with the Ref pin causes a typical device to degrade to approximately 80 dB CMR ($G = 10$ V/V).

6.1.1 Setting the Gain

Gain is selected with a jumper connection (see Figure 6-1). With no jumper installed, $G = 10$ V/V. With a jumper installed, $G = 100$ V/V. To preserve good gain accuracy, this jumper must have low series resistance. A resistance of 0.5 Ω in series with the jumper decreases the gain by 0.1%.

Internal resistor ratios are laser trimmed to provide excellent gain accuracy. Actual resistor values can vary by approximately $\pm 25\%$ from the nominal values shown.

Gains between 10 V/V and 100 V/V are achieved by connecting an external resistor to the jumper pins. However, this configuration is not recommended because the $\pm 25\%$ variation of internal resistor values makes the required external resistor value uncertain. A companion model, the INA128, features accurately trimmed internal resistors so that gains from 1 V/V to 10,000 V/V can be set with an external resistor.

6.1.2 Dynamic Performance

Typical performance curve *Gain vs Frequency* (Figure 5-1) shows that, despite the low quiescent current, the INA141 achieves wide bandwidth, even at $G = 100$ V/V. This wide bandwidth is a result of the current-feedback topology of the INA141. Settling time also remains excellent at $G = 100$ V/V.

6.1.3 Noise Performance

The INA141 provides very low noise in most applications. Low-frequency noise is approximately $0.2 \mu\text{V}_{\text{PP}}$ measured from 0.1 Hz to 10 Hz ($G = 100$ V/V). The INA141 provides dramatically improved noise when compared to state-of-the-art, chopper-stabilized amplifiers.

6.1.4 Offset Trimming

The INA141 is laser trimmed for low offset voltage and offset voltage drift. Most applications require no external offset adjustment. Figure 6-2 shows an optional circuit for trimming the output offset voltage. The voltage applied to Ref pin is summed with the output. The op-amp buffer provides low impedance at the Ref pin to preserve good common-mode rejection.

Figure 6-2. Optional Trimming of Output Offset Voltage.

6.1.5 Input Bias Current Return Path

The input impedance of the INA141 is extremely high—approximately $10^{10} \Omega$. However, a path must be provided for the input bias current of both inputs. This input bias current is approximately ± 2 nA. High input impedance means that this input bias current changes very little with varying input voltage.

Input circuitry must provide a path for this input bias current for proper operation. Figure 6-3 shows various provisions for an input bias current path. Without a bias current path, the inputs float to a potential that exceeds the common-mode range of the INA141 and the input amplifiers saturate.

If the differential source resistance is low, the bias current return path can be connected to one input (see the thermocouple example in Figure 6-3). With higher source impedance, using two equal resistors provides a balanced input with possible advantages of lower input offset voltage due to bias current and better high-frequency common-mode rejection.

Figure 6-3. Providing an Input Common-Mode Current Path.

6.1.6 Input Common-Mode Range

The linear input voltage range of the input circuitry of the INA141 is from approximately 1.4 V less than the positive supply voltage to 1.7 V greater than the negative supply. As a differential input voltage causes the output voltage to increase, however, the linear input range is limited by the output voltage swing of amplifiers A₁ and A₂. Therefore, the linear common-mode input range is related to the output voltage of the complete amplifier. This behavior also depends on supply voltage (see the *Input Common-Mode Range vs Output Voltage* plots, [Figure 5-9](#) and [Figure 5-10](#)).

Input overload can produce an output voltage that appears normal. For example, if an input overload condition drives both input amplifiers to the positive output swing limit, the difference voltage measured by the output amplifier is near zero. The output of the INA141 is near 0V even though both inputs are overloaded.

6.1.7 Low-Voltage Operation

The INA141 operates on power supplies as low as ± 2.25 V. Performance remains excellent with power supplies ranging from ± 2.25 V to ± 18 V. Most parameters vary only slightly through this supply voltage range—see Typical Performance Curves. Operation at a very low supply voltage requires careful attention to make sure that the input voltages remain within the linear range. Voltage swing requirements of internal nodes limit the input common-mode range with low power-supply voltage. The *Input Common-Mode Range vs Output Voltage* typical characteristics plots, [Figure 5-9](#) and [Figure 5-10](#), show the range of linear operation for ± 15 -V, ± 5 -V, and ± 2.5 -V supplies.

6.1.8 Input Protection

The inputs of the INA141 are individually protected for voltages up to ± 40 V. For example, a condition of -40 V on one input and $+40$ V on the other input does not cause damage. Internal circuitry on each input provides low series impedance under normal signal conditions. To provide equivalent protection, series input resistors contributes excessive noise. If the input is overloaded, the protection circuitry limits the input current to a safe value of approximately 1.50 mA to 5 mA. The inputs are protected even if the power supplies are disconnected or turned off.

7 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

7.1 Device Nomenclature

Table 7-1. Device Nomenclature

Part Number	Definition
INA141U INA141U/2K5 INA141UA INA141UA/2K5	The die is manufactured in CSO: SHE or CSO: TID.
INA141P INA141PA	The die is manufactured in CSO: SHE.

7.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](https://www.ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

7.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

7.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

7.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

7.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

8 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (August 2023) to Revision B (January 2026)	Page
• Added description of device flow information in the <i>Specifications</i>	4
• Added different fabrication process specifications for Offset voltage (RTI) in the <i>Electrical Characteristics</i>	5
• Added all chips site origins (CSO) condition to the typical test conditions in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Offset voltage drift (RTI) in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Voltage noise (RTI) in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Current noise $f = 10\text{Hz}$ in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Current noise $f = 1\text{kHz}$ in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Output voltage in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Bandwidth, $-3\text{dB } G = 10\text{V/V}$ in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Slew rate in the <i>Electrical Characteristics</i>	5
• Added different fabrication process specifications for Quiescent current in the <i>Electrical Characteristics</i>	5
• Added <i>all chips site origins</i> (CSO) condition to the typical test conditions in the <i>Typical Characteristics</i>	8
• Added CSO: SHE to <i>Gain vs Frequency</i> , <i>Common-Mode Rejection vs Frequency</i> , <i>Positive Power Supply Rejection vs Frequency</i> , <i>Negative Power Supply Rejection vs Frequency</i> , <i>Input-Referred Noise vs Frequency</i> , <i>Output Voltage Swing vs Power Supply Voltage</i> , and <i>Short-circuit Output Current vs Temperature</i> curves in the <i>Typical Characteristics</i>	8
• Added CSO: TID to the <i>Quiescent Current and Slew Rate vs Temperature</i> , <i>Positive Output Voltage Swing vs Output Current</i> , <i>Negative Output Voltage Swing vs Output Current</i> , <i>Small-Signal Step Response</i> , and <i>Large-Signal Step Response</i> curves in the <i>Typical Characteristics</i>	8
• Added <i>Gain vs Frequency</i> , <i>Common-Mode Rejection vs Frequency</i> , <i>Positive Power Supply Rejection vs Frequency</i> , <i>Negative Power Supply Rejection vs Frequency</i> , and <i>Input-Referred Noise vs Frequency</i> curves for CSO: TID in the <i>Typical Characteristics</i>	8
• Added <i>Quiescent Current and Slew Rate vs Temperature</i> , <i>Output Voltage Swing vs Output Current</i> , <i>Small-Signal Step Response</i> and <i>Large-Signal Step Response</i> curves for CSO: SHE in the <i>Typical Characteristics</i>	8
• Added Part Number flow information table to the <i>Device Nomenclature</i>	18

Changes from Revision * (September 2000) to Revision A (August 2023)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Added the <i>Package Information</i> table, and the <i>Pin Configuration and Functions</i> , <i>Specifications</i> , <i>ESD Ratings</i> , <i>Recommended Operating Conditions</i> , <i>Thermal Information</i> , <i>Application and Implementation</i> , <i>Device and Documentation Support</i> , and <i>Mechanical, Packaging, and Orderable Information</i> sections.....	1
• Deleted PDIP package from data sheet.....	1
• Added single supply specification to Absolute Maximum Ratings.....	4
• Added note that output short-circuit (to ground) in Absolute Maximum Ratings means to short-circuit to VS / 2.....	4
• Added "TA = –40°C to +85°C" test condition to Offset voltage vs temperature specification in the <i>Electrical Characteristics</i> and renamed to Offset voltage drift.....	5
• Added test conditions "VREF = 0 V, VCM = VS / 2 and G = 10 below the title.....	5
• Deleted common-mode voltage typical values in the <i>Electrical Characteristics</i> and combined to one line.....	5
• Added "TA = –40°C to +85°C" test condition to Bias current vs temperature specification in the <i>Electrical Characteristics</i> and renamed to Input bias current drift for clarity.....	5
• Added "TA = –40°C to +85°C" test condition to Offset current vs temperature specification in <i>Electrical Characteristics</i> and renamed to Input offset current drift for clarity.....	5
• Added "TA = –40°C to +85°C" test condition for Gain error vs temperature in the <i>Electrical Characteristics</i> and renamed to Gain drift for clarity.....	5
• Changed parameter names from "Voltage - Positive" and "Voltage - Negative" to "Output voltage" in the <i>Electrical Characteristics</i>	5
• Added "Continuous to VS / 2" test condition short-circuit current specification in the <i>Electrical Characteristics</i> for clarity.....	5
• Changed short-circuit current typical value from +6/-15 mA ±20 mA.....	5
• Changed bandwidth typical value from 1 MHz to 610 kHz in the <i>Electrical Characteristics</i>	5
• Changed slew rate typical value from 4 V/μs to 2 V/μs in the <i>Electrical Characteristics</i>	5
• Deleted redundant voltage range, operating temperature range, and specification temperature range specifications from <i>Electrical Characteristics</i>	5
• Changed Figure 6-2, <i>Common-Mode Rejection vs Frequency</i>	8
• Changed Figure 6-8, <i>Quiescent Current and Slew Rate vs Temperature</i>	8
• Changed <i>Output Voltage Swing vs Output Current</i> single plot to Figure 6-12, <i>Positive Output Voltage Swing vs Output Current</i> and Figure 6-12, <i>Negative Output Voltage Swing vs Output Current</i>	8
• Changed Figure 6-18, <i>Small-Signal Step Response</i>	8
• Changed Figure 6-19, <i>Large-Signal Step Response</i>	8
• Changed Figure 6-20, <i>0.1Hz to 10Hz Input-Referred Voltage Noise</i>	8
• Changed G from 1 to 10V/V at the end of the <i>Application Information</i> section.....	13
• Deleted reference to <i>Input Bias Current vs Common-Mode Input Voltage</i> plot.....	15

9 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
INA141U	Active	Production	SOIC (D) 8	75 TUBE	-	Call TI	Level-3-260C-168 HR	-	INA 141U

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant

D0008A

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.

EXAMPLE BOARD LAYOUT

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.125 MM] THICK STENCIL
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
