- Low-Voltage Differential 30-Ω Line Drivers and Receivers for Signaling Rates† up to 100 Mbps
- Power Dissipation at 100 Mbps
  - Driver: 50 mW Typical
  - Receiver: 30 mW Typical
- Meets or Exceeds Current Revision of M-LVDS Standard TIA/EIA-899 for Multipoint Data Interchange
- Controlled Driver Output Voltage Transition Times for Improved Signal Quality
- -1-V to 3.4-V Common-Mode Voltage Range Allows Data Transfer With up to 2 V of Ground Noise
- Type-1 Receivers Incorporate 25 mV of Hysteresis
- Type-2 Receivers Provide an Offset (100 mV) Threshold to Detect Open-Circuit and Idle-Bus Conditions
- Operates From a Single 3.3-V Supply
- Propagation Delay Times Typically 2.3 ns for Drivers and 5 ns for Receivers
- Power-Up/Down Glitch-Free Driver
- Driver Handles Operation Into a Continuous Short Circuit Without Damage
- Bus Pins High Impedance When Disabled or  $V_{CC} \leq 1.5 V$
- 200-Mbps Devices Available (SN65MLVD201, 203, 206, and 207)

SN65MLVD202, SN65MLVD205

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

†The signaling rate of a line is the number of voltage transitions that are made per second expressed in bps (bits per second) units.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SLLS463E – SEPTEMBER 2001 – REVISED JUNE 2003

## description

This series of SN65MLVD20x devices are low-voltage differential line drivers and receivers complying with the proposed multipoint low-voltage differential signaling (M-LVDS) standard (TIA/EIA-899). These circuits are similar to their TIA/EIA-644 standard compliant LVDS counterparts, with added features to address multipoint applications. Driver output current has been increased to support doubly-terminated, 50-Ω load multipoint applications. Driver output slew rates are optimized for signaling rates up to 100 Mbps.

Types 1 and 2 receivers are available. Both types of receivers operate over a common-mode voltage range of -1 V to 3.4 V to provide increased noise immunity in harsh electrical environments. Type-1 receivers have their differential input voltage thresholds near zero volts ( $\pm 50$  mV), and include 25 mV of hysteresis to prevent output oscillations in the presence of noise. Type-2 receivers include an offset threshold to detect open-circuit, idle-bus, and other fault conditions, and provide a known output state under these conditions.

The intended application of these devices is in half-duplex or multipoint baseband data transmission over controlled impedance media of approximately 100-Ω characteristic impedance. The transmission media may be printed circuit board traces, backplanes, or cables. (Note: The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media, the noise coupling to the environment, and other application-specific characteristics).

These devices are characterized for operation from -40°C to 85°C.

### AVAILABLE OPTIONS

NOMINAL SIGNALING RATE, Mbps	FOOTPRINT	RECEIVER TYPE	PART NUMBER†
100	SN75176	Type 1	SN65MLVD200D
100	SN75ALS180	Type 1	SN65MLVD202D
100	SN75176	Type 2	SN65MLVD204D
100	SN75ALS180	Type 2	SN65MLVD205D

† The D package is available taped and reeled. Add the R suffix to the device type (e.g., SN65MLVD200DR).

### Function Tables

TYPE-1 RECEIVER (200, 202)

INPUTS		OUTPUT
$V_{ID} = V_A - V_B$	$\overline{RE}$	R
$V_{ID} \geq 50$ mV	L	H
$-50$ mV $< V_{ID} < 50$ mV	L	?
$V_{ID} \leq -50$ mV	L	L
X	H	Z
X	Open	Z
Open Circuit	L	?

TYPE-2 RECEIVER (204, 205)

INPUTS		OUTPUT
$V_{ID} = V_A - V_B$	$\overline{RE}$	R
$V_{ID} \geq 150$ mV	L	H
$50$ mV $< V_{ID} < 150$ mV	L	?
$V_{ID} \leq 50$ mV	L	L
X	H	Z
X	Open	Z
Open Circuit	L	L

### DRIVER

INPUT	ENABLE	OUTPUTS	
		A OR Y	B OR Z
L	H	L	H
H	H	H	L
OPEN	H	L	H
X	OPEN	Z	Z
X	L	Z	Z

H = high level, L = low level, Z = high impedance, X = Don't care, ? = indeterminate

NOTE: H= high level, L = low level. Output state assumes receiver is enabled ( $\overline{RE}$  is Low).

**Table 2. Type-2 Receiver Input Threshold Test Voltages**

APPLIED VOLTAGES		RESULTING DIFFERENTIAL INPUT VOLTAGE	RESULTING COMMON-MODE INPUT VOLTAGE	RECEIVER OUTPUT
V <sub>A</sub>	V <sub>B</sub>	V <sub>ID</sub>	V <sub>CM</sub>	V <sub>O</sub>
3.475 V	3.325 V	150 mV	3.4 V	H
3.425 V	3.375 V	50 mV	3.4 V	L
-0.925 V	-1.075 V	150 mV	-1.0 V	H
-0.975 V	-1.025 V	50 mV	-1.0 V	L
3.800 V	3.000 V	800 mV	3.4 V	H
3.000 V	3.800 V	-800 mV	3.4 V	L
-0.600 V	-1.400 V	800 mV	-1.0 V	H
-1.400 V	-0.600 V	-800 mV	-1.0 V	L

NOTE: H= high level, L = low level. Output state assumes receiver is enabled ( $\overline{RE}$  is Low).

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. All input pulses are supplied by a generator having the following characteristics:  $t_r$  or  $t_f \leq 1$  ns, pulse repetition rate (PRR) = 1 Mpps, pulse width =  $0.5 \pm 0.05 \mu s$ .  
 B. Resistors are 1% tolerance, metal film, and surface mount.  
 C.  $C_L$  is 20% tolerance, low-loss ceramic, and surface mount.  
 D.  $R_1$  and  $C_L$  are located within 2 cm of the D.U.T.  
 E.  $R_2$  is located within 15 cm of the D.U.T.

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. All input pulses are supplied by an Agilent 8304A Stimulus System.  
 B. The measurement is made on a TEK TDS6604 running TDSJIT3 application software  
 C. Period jitter is measured using a 100 MHz 50 ±1% duty cycle clock input.  
 D. Peak-to-peak jitter is measured using a 200Mbps 2<sup>15</sup>-1 PRBS input.

**APPLICATION INFORMATION**

**Type-1 and Type-2 receivers**

The M-LVDS standard defines Type-1 and Type-2 receivers. Type-1 receivers include no provisions for failsafe and have their differential input voltage thresholds near zero volts. Type-2 receivers have their differential input voltage thresholds offset from zero volts to detect the absence of a voltage difference. Type-1 receivers maximize the differential noise margin and are intended for maximum signaling rates. Type-2 receivers are intended for control signals and slower signaling rates. The impact on receiver output by the offset input can be seen in Table 3 and Figure 33.

**Table 3. M-LVDS Receiver Input Voltage Threshold Requirements**

Receiver Type	Output Low	Output High
1	$-2.4\text{ V} \leq V_{ID} \leq -0.05\text{ V}$	$0.05\text{ V} \leq V_{ID} \leq 2.4\text{ V}$
2	$-2.4\text{ V} \leq V_{ID} \leq 0.05\text{ V}$	$0.15\text{ V} \leq V_{ID} \leq 2.4\text{ V}$

**Figure 33. Receiver Differential Input Voltage Showing Transition Region**

**APPLICATION INFORMATION**

**comparison of M-LVDS with RS-485**

RS-485 applications are similar to M-LVDS. The two standards define balanced multipoint systems with some basic architecture changes due to the different applications. Table 4 gives a high-level comparison of the two different technologies.

**Table 4. Comparison Between M-LVDS and RS-485 Standards**

	Number of Loads	Differential Voltage Range	Common-Mode Voltage Range	Maximum Signaling Rate (Mbps)	Receiver Minimum Threshold
RS-485	32	1.5 V to 5 V	-7 V to 12 V	50 Mbps	±200 mV
M-LVDS	32	480 mV to 650 mV	-1 V to 3.4 V	500 Mbps	±50 mV

It can be seen that with the greater differential output voltage and common-mode voltage range of the RS-485-type device, it can handle longer signaling distances where M-LVDS offers ten times the signaling rate of RS-485.

NOTE A: The line should be terminated at both ends in its characteristic impedance ( $R_T = Z_O$ ). Stub lengths off the main line should be kept as short as possible.

**Figure 34. Typical Application Circuit**

**PACKAGING INFORMATION**

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
<a href="#">SN65MLVD200D</a>	Obsolete	Production	SOIC (D)   8	-	-	Call TI	Call TI	-40 to 85	MF200

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

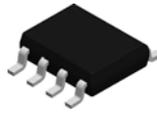

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
