

SN754410

SLRS007C - NOVEMBER 1986-REVISED JANUARY 2015

# SN754410 Quadruple Half-H Driver

#### **Features**

- 1-A Output-Current Capability Per Driver
- Applications Include Half-H and Full-H Solenoid **Drivers and Motor Drivers**
- Designed for Positive-Supply Applications
- Wide Supply-Voltage Range of 4.5 V to 36 V
- TTL- and CMOS-Compatible High-Impedance **Diode-Clamped Inputs**
- Separate Input-Logic Supply
- Thermal Shutdown
- Internal ESD Protection
- Input Hysteresis Improves Noise Immunity
- 3-State Outputs
- Minimized Power Dissipation
- Sink/Source Interlock Circuitry Prevents Simultaneous Conduction
- No Output Glitch During Power Up or Power
- Improved Functional Replacement for the SGS L293

## **Applications**

- Stepper Motor Drivers
- DC Motor Drivers
- Latching Relay Drivers

## 3 Description

The SN754410 is a quadruple high-current half-H driver designed to provide bidirectional drive currents up to 1 A at voltages from 4.5 V to 36 V. The device is designed to drive inductive loads such as relays, solenoids, DC and bipolar stepping motors, as well as other high-current/high-voltage loads in positivesupply applications.

All inputs are compatible with TTL-and low-level CMOS logic. Each output (Y) is a complete totempole driver with a Darlington transistor sink and a pseudo-Darlington source. Drivers are enabled in pairs with drivers 1 and 2 enabled by 1,2EN and drivers 3 and 4 enabled by 3,4EN. When an enable input is high, the associated drivers are enabled and their outputs become active and in phase with their inputs. When the enable input is low, those drivers are disabled and their outputs are off and in a highimpedance state. With the proper data inputs, each pair of drivers form a full-H (or bridge) reversible drive suitable for solenoid or motor applications.

A separate supply voltage (V<sub>CC1</sub>) is provided for the logic input circuits to minimize device power dissipation. Supply voltage V<sub>CC2</sub> is used for the output circuits.

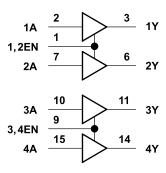

The SN754410 is designed for operation from -40°C to 85°C.

# 6 Pin Configuration and Functions

#### **Pin Functions**

PIN		TYPE	DESCRIPTION			
NAME	NO.	IIFE	DESCRIPTION			
1,2EN	1	I	Enable driver channels 1 and 2 (active high input)			
<1:4>A	2, 7, 10, 15	I	Driver inputs, non-inverting			
<1:4>Y	3, 6, 11, 14	0	Driver outputs			
GROUND	4, 5, 12, 13	_	Device ground and heat sink pin. Connect to circuit board ground plane with multiple solid vias			
V <sub>CC2</sub>	8	_	Power VCC for drivers 4.5V to 36V			
3,4EN	9	I	Enable driver channels 3 and 4 (active high input)			
V <sub>CC1</sub>	16	_	5V supply for internal logic translation			

## 7 Specifications

#### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) (1)(2)

		MIN	MAX	UNIT
V <sub>CC1</sub>	Output supply voltage range	-0.5	36	V
V <sub>CC2</sub>	Output supply voltage range	-0.5	36	V
VI	Input voltage	-0.5	36	V
Vo	Output voltage range	-3	V <sub>CC2</sub> + 3	V
I <sub>P</sub>	Peak output current		±2	Α
Io	Continuous output current		±1	Α
P <sub>D</sub>	Continuous total power dissipation at (or below) 25°C free-air temperature (3)		2075	mW
T <sub>A</sub>	Operating free-air temperature range	-40	85	°C
TJ	Operating virtual junction temperature range	-40	150	°C
T <sub>stg</sub>	Storage temperature range		260	°C

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### 7.2 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>CC1</sub>	Logic supply voltage	4.5	5.5	V
$V_{CC2}$	Output supply voltage	4.5	36	V
$V_{IH}$	High-level input voltage	2	5.5	V
V <sub>IL</sub>	Low-level input voltage	-0.3 <sup>(1)</sup>	0.8	V
$T_J$	Operating virtual junction temperature	-40	125	°C
T <sub>A</sub>	Operating free-air temperature	-40	85	°C

<sup>(1)</sup> The algebraic convention, in which the least positive (most negative) limit is designated as minimum, is used in this data sheet for logic voltage levels.

#### 7.3 Thermal Information

	SN754410		
	NE	UNIT	
	16 PINS		
R <sub>θJA</sub> Junc	tion-to-ambient thermal resistance	60	°C/W

(1) For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

<sup>(2)</sup> All voltage values are with respect to network GND.

<sup>(3)</sup> For operation above 25°C free-air temperature, derate linearly at the rate of 16.6 mW/°C. To avoid exceeding the design maximum virtual junction temperature, these ratings should not be exceeded. Due to variations in individual device electrical characteristics and thermal resistance, the built-in thermal overload protection can be activated at power levels slightly above or below the rated dissipation.

#### 7.4 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

	PARAMETER	Т	EST CONDITIONS	MIN	TYP	MAX	UNIT
V <sub>IK</sub>	Input clamp voltage	I <sub>I</sub> = -12 m	A		-0.9	-1.5	V

## 9 Detailed Description

#### 9.1 Overview

The SN754410 is a quadruple high-current half-H driver designed to provide bidirectional drive currents up to 1 A at voltages from 4.5 V to 36 V. The device is designed to drive inductive loads such as relays, solenoids, DC and bipolar stepping motors, as well as other high-current/high-voltage loads in positive-supply applications. All inputs are compatible with TTL and low-level CMOS logic. Each output (Y) is a complete totem-pole driver with a Darlington transistor sink and a pseudo-Darlington source. Drivers are enabled in pairs with drivers 1 and 2 enabled by 1,2EN and drivers 3 and 4 enabled by 3,4EN. When an enable input is high, the associated drivers are enabled and their outputs become active and in phase with their inputs. When the enable input is low, those drivers are disabled and their outputs are off and in a high-impedance state. With the proper data inputs, each pair of drivers form a full-H (or bridge) reversible drive suitable for solenoid or motor applications.

A separate supply voltage ( $V_{CC1}$ ) is provided for the logic input circuits to minimize device power dissipation. Supply voltage  $V_{CC2}$  is used for the output circuits. The SN754410 is designed for operation from  $-40^{\circ}$ C to 85°C.

#### 9.2 Functional Block Diagram

This symbol is in accordance with ANSI/IEEE Std 91-1984and IEC Publication 617-12.

#### 9.3 Feature Description

#### 9.3.1 High Current, High Voltage Outputs

Four high current and high voltage outputs feature clamp diodes for inductive load driving.

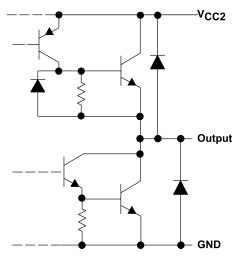

Figure 5. Typical of All Outputs

### **Feature Description (continued)**

### 9.3.2 TTL Compatible Inputs

Data inputs and enable inputs are compatible with TTL. 3.3-V CMOS logic is also acceptable, however open or high impedance input voltage can approach  $V_{CC1}$  voltage.

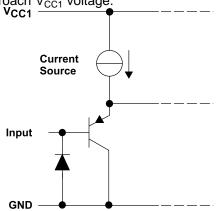

Figure 6. Equivalent of Each Input

#### 9.4 Device Functional Modes

Table 1. Function Table<sup>(1)</sup>

INPL	ITS <sup>(2)</sup>	OUTPUTS
Α	EN	Y
Н	Н	Н
L	Н	L
X	L	Z

(1) H = high-level

L = low-level

X = irrelevant

Z = high-impedance (off)

(2) In the thermal shutdown mode, the output is in a high-impedance state regardless of the input levels.

## 10 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

## 10.1 Application Information

Provide a 5-V supply to V<sub>CC1</sub> and valid logic input levels to data and enable inputs. V<sub>CC2</sub> must be connected to a power supply capable of suppling the needed current and voltage demand for the loads connected to the

### 10.2 Typical Application

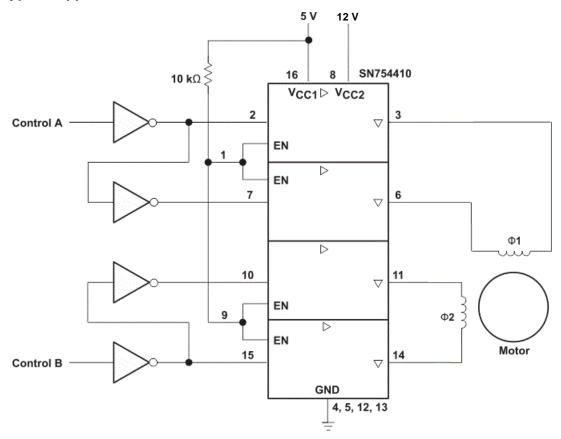

Figure 7. Typical Application Schematic

## 10.2.1 Design Requirements

The design techniques in the following sections may be used for applications which fall within the following requirements.

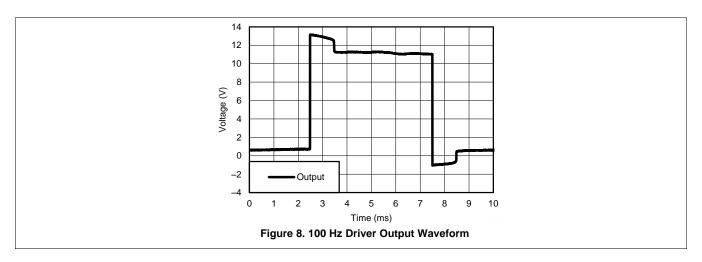

- 4.5-V minimum and 36-V maximum  $V_{\text{CC2}}$  voltage
- 1000-mA or less output current per channel
- 5-V supply with 10% tolerance or less
- TTL compatible logic inputs

# **Typical Application (continued)**

### 10.2.2 Application Curves

Driver output voltage waveform with a two phase stepper motor; 12-V  $20-\Omega$  coils.

# 11 Power Supply Recommendations

 $V_{CC1}$  is 5 V  $\pm$  0.5 V and  $V_{CC2}$  can be same supply as  $V_{CC1}$  or a higher voltage supply with peak voltage up to 36 V. Bypass capacitors of 0.1 uF or greater should be used at  $V_{CC1}$  and  $V_{CC2}$  pins. There are no power up or power down supply sequence order requirements.

## 12 Layout

### 12.1 Layout Guidelines

Place device near the load to keep output traces short to reduce EMI. Use solid vias to transfer heat from ground pins to circuit board's ground plane.

#### 12.2 Layout Example

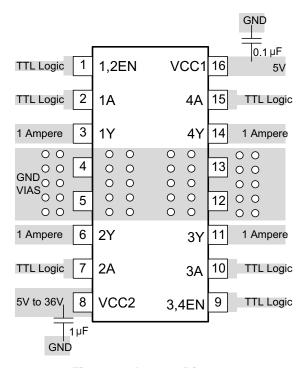

Figure 9. Layout Diagram

## 13 Device and Documentation Support

## 13.1 Trademarks

All trademarks are the property of their respective owners.

#### 13.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 13.3 Glossary

SLYZ022 — TI Glossary.

This glossary lists and explains terms, acronyms, and definitions.

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

<sup>(4)</sup> Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

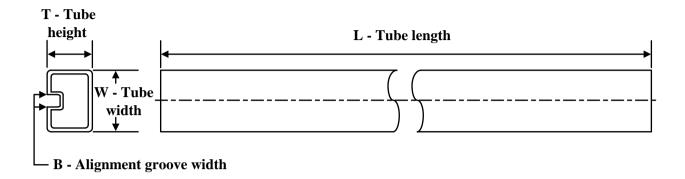

<sup>(5)</sup> MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.
