

SN5545xB, SN7545xB Dual-Peripheral Drivers for High-Current, High-Speed Switching

1 Features

- Characterized for use to 300mA
- High-voltage outputs up to 30V
- No output latch-up at 20V (after conducting 300mA)
- High-speed switching
- Open-collector outputs
- Circuit flexibility for varied applications
- TTL compatible diode-clamped inputs
- Standard supply voltages

2 Applications

- High-speed logic buffers
- Power drivers
- Lamp drivers
- LED drivers
- Line drivers
- Memory drivers

3 Description

The SN5545xB and SN7545xB devices are dual-peripheral drivers designed for use in systems that employ TTL logic. This family is functionally interchangeable with and replaces the SN75450 family and the SN75450A family devices manufactured previously. The speed of the devices is equal to that of the SN75450 family, and the parts are designed to ensure freedom from latch-up. Diode-clamped inputs simplify circuit design.

The SNx5451B, SNx5452B, SNx5453B, and SNx5454B devices are dual peripheral AND, NAND, OR, and NOR drivers, respectively (assuming positive logic), with the output of the logic gates internally connected to the bases of the npn output transistors.

The SN5545xB drivers are characterized for operation over the full military range of -55°C to 125°C . The SN7545xB drivers are characterized for operation from 0°C to 70°C .

Device Information

PART NUMBER	PACKAGE ⁽¹⁾	BODY SIZE (NOM)
SN7545xBP	PDIP (8)	9.81mm × 6.35mm

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT	
V _{CC}	Supply voltage, (see ⁽²⁾)		7	V	
V _I	Input voltage		5.5	V	
	Inter-emitter voltage (see Note ⁽³⁾)		5.5	V	
V _O	Off-state output voltage		30	V	
I _{OK}	Continuous collector or output current, (see Note ⁽⁴⁾)		400	mA	
	Peak collector or output current, I _I (tw ≤ 10 ms, duty cycle ≤ 50%, see Note ⁽⁵⁾)		500	mA	
	Continuous total power dissipation	See Dissipation Ratings			
T _A	Operating free-air temperature	SN5545xB	-55	125	°C
		SN7545xB	0	70	
	Case temperature for 60 seconds	SN5545xB FK package		260	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds	SN5545xB JG package		100	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	SN7545xB D or P package		260	°C
T _J	Operating virtual junction temperature		150	°C	
T _{stg}	Storage temperature	-65	150	°C	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Voltage values are with respect to network GND, unless otherwise specified.
- (3) This is the voltage between two emitters of a multiple-emitter transistor.
- (4) This value applies when the base-emitter resistance (RBE) is equal to or less than 500 Ω.
- (5) Both halves of these dual circuits may conduct rated current simultaneously; however, power dissipation averaged over a short time interval must fall within the continuous dissipation rating.

6.2 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT	
V _{CC}	Supply voltage	SN5545xB	4.5	5	5.5	V
		SN7545xB	4.75	5	5.25	
V _{IH}	High-level input voltage	2			V	
V _{IL}	Low-level input voltage			0.8	V	
T _A	Operating free-air temperature	SN5545xB	-50		125	°C
		SN7545xB	0		70	

6.3 Thermal Information

THERMAL METRIC ⁽¹⁾	SN7545xB			UNIT	
	D (SOIC)	P (PDIP)	PS (SO)		
	8 PINS	8 PINS	8 PINS		
R _{θJA}	Junction-to-ambient thermal resistance	122.2	63.7	119.6	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	68.4	53.6	71.5	°C/W
R _{θJB}	Junction-to-board thermal resistance	62.4	40.8	68.7	°C/W
ψ _{JT}	Junction-to-top characterization parameter	23.2	31.1	31.6	°C/W
ψ _{JB}	Junction-to-board characterization parameter	62.0	40.8	67.7	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.4 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_{IK}	Input clamp voltage	$V_{CC} = \text{MIN}, I_I = -12 \text{ mA}$			-1.2	-1.5	V
V_{OL}	Low-level output voltage	$V_{CC} = \text{MIN}, V_{IL} = 0.8 \text{ V}, I_{OL} = 100 \text{ mA}$	SN5545xB		0.25	0.5	V
			SN7545xB		0.25	0.4

8 Detailed Description

8.1 Overview

The SN7545xB and SN5545xB devices provide dual-output drivers with AND, NAND, NOR, or OR logic inputs. If each logic input is set to the appropriate voltage level, then the output driver will turn on, pulling the driver to ground and allowing current to flow.

8.3 Feature Description

The SNx5451B devices allow for high current driving up to 300 mA. This family of devices have AND, NAND, OR, or NOR input logic gates to allow for a wide variety of applications. The SN7545xB devices are rated for a commercial temperature range of 0°C to 70°C, and the SN5545xB devices are rated for a military temperature range of –65°C to 125°C.

8.4 Device Functional Modes

Table 8-1, Table 8-2, Table 8-3, and Table 8-4 list the functional modes of the SNx545xB.

9 Application and Implementation

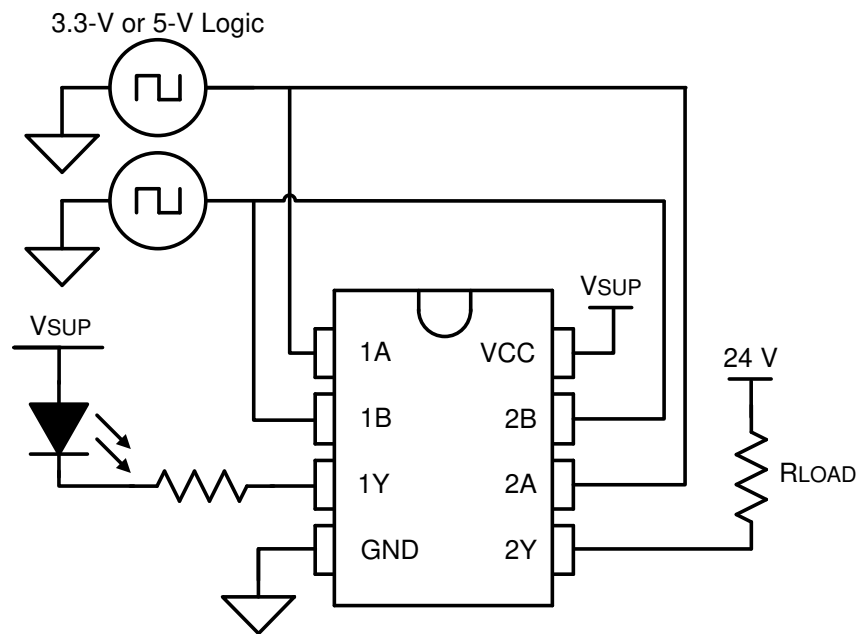

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

Typically the SN75451B device drives a high-voltage or high-current peripheral from an MCU or logic device that cannot tolerate these conditions. The following design is a common application of the SN75451B device, driving an LED using one channel and a high voltage peripheral using the other. In this configuration, the LED will turn on whenever the high voltage peripheral is on.

9.2 Typical Application

Copyright © 2016, Texas Instruments Incorporated

Figure 9-1. SN75451B Driving an LED and a High Voltage Peripheral

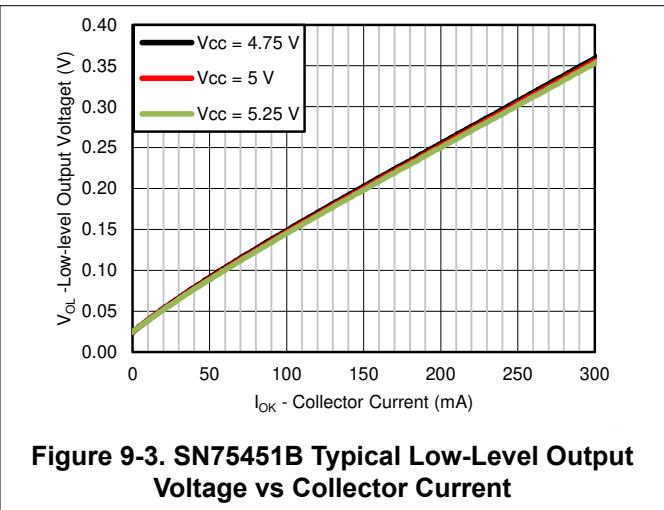

9.2.1 Design Requirements

Each of the inputs to the logic gate should never float. If one of the inputs is floating, then the logic gate could be in an unknown state. Be sure to connect ground or V_{CC} to any unused input channels.

9.2.2 Detailed Design Procedure

- Recommended Input Conditions:
 - For specified high and low levels, see V_{IH} and V_{IL} in [Recommended Operating Conditions](#).
 - The input voltage must not exceed the V_I specified in [Absolute Maximum Ratings](#).
- Recommended Output Conditions:
 - It is recommended that the load current not exceed 300 mA.
 - The load current must never exceed the I_{OK} noted in [Absolute Maximum Ratings](#).

9.2.3 Application Curves

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in [Recommended Operating Conditions](#). The V_{CC} pin should have a bypass capacitor to prevent power disturbance. A 0.1- μ F capacitor is suitable for this device.

11 Layout

11.1 Layout Guidelines

Thin traces can be used on the input due to the low-current logic that is used to drive the SNx545xB devices. Take care to separate the input channels to eliminate crosstalk. These traces are recommended for the output to be able to drive high currents. Be sure to connect ground or V_{CC} to any unused input channels, and use a bypass capacitor on the V_{CC} pin to prevent any power glitches.

11.2 Layout Example

Figure 11-1. SN75451BD Layout

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

13 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision D (January 2017) to Revision E (May 2026) Page

- Updated the numbering format for tables, figures, and cross-references throughout the document..... 1

Changes from Revision C (May 2016) to Revision D (January 2017) Page

- Replaced image *SN75451B Logic Diagram* 1

Changes from Revision B (January 1999) to Revision C (May 2016) Page

- Added *ESD Ratings* table, *Feature Description* section, *Device Functional Modes, Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section..... 1

14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. (1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

NOTES:

- Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed $.006$ [0.15] per side.
- This dimension does not include interlead flash.
- Reference JEDEC registration MS-012, variation AA.

EXAMPLE BOARD LAYOUT

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE
 EXPOSED METAL SHOWN
 SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.125 MM] THICK STENCIL
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

MECHANICAL DATA

PS (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

PS (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Falls within JEDEC MS-001 variation BA.

PACKAGE OUTLINE

JG0008A

CDIP - 5.08 mm max height

CERAMIC DUAL IN-LINE PACKAGE

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package can be hermetically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification.
5. Falls within MIL STD 1835 GDIP1-T8

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
