TLE202xM Excalibur, High-Speed, Low-Power, Precision, Operational Amplifiers

1 Features

- Supply current: 300μA, max
- High unity-gain bandwidth: 2MHz
- High slew rate: 0.65V/μs
- Supply-current change over military temperature range: 10μA at V_S = ± 15V
- Specified for both 5V single-supply and ±15V operation
- Phase-reversal protection
- High open-loop gain: 6.5V/μV (136dB)
- Low offset voltage: 100μV, max
- Offset voltage drift with time: 0.005μV/mo
- Low input bias current: 50nA, max
- Low noise voltage: 19nV/√Hz

2 Description

The TLE2021xM, TLE2022xM, and TLE2024xM (TLE202xM) devices are precision, high-speed, low-power operational amplifiers using a new Texas Instruments Excalibur process. These devices combine the best features of the OP21, with a highly improved slew rate and unity-gain bandwidth.

The complementary bipolar Excalibur process uses isolated vertical pnp transistors that yield dramatic improvement in unity-gain bandwidth and slew rate over similar devices.

The addition of a bias circuit in conjunction with this process results in extremely stable parameters with both time and temperature. Therefore, a precision device remains a precision device even with changes in temperature and over years of use.

This combination of excellent dc performance with a common-mode input voltage range that includes the negative rail makes these devices an excellent choice for low-level signal conditioning applications in either single-supply or split-supply configurations. In addition, these devices offer phase-reversal protection circuitry that eliminates an unexpected change in output states when one of the inputs is less than the negative supply rail.

A variety of available options includes ceramic DIP and chip-carrier versions for high-density systems applications.

The M-suffix devices are characterized for operation over the full military temperature range of –55°C to +125°C.

Device Information

PART NUMBER(1)	CHANNEL COUNT	PACKAGE(2)
TLE2021xM	Single	FK (LCCC, 20)
		JG (CDIP, 8)
TLE2022xM	Dual	FK (LCCC, 20)
		JG (CDIP, 8)
TLE2024xM	Quad	FK (LCCC, 20)
		J (CDIP, 14)

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) [(1)]

		VALUE	UNIT
Supply voltage, V_{CC+} [(2)]		20	V
Supply voltage, V_{CC-} [(2)]		–20	V
Differential input voltage, V_{ID} [(3)]		±0.6	V
Input voltage range, V_I (any input[(2)])		$\pm V_{CC}$	
Input current, I_I (each input)		±1	mA
Output current, I_O (each output):	TLE2021	±20	mA
	TLE2022	±30	
	TLE2024	±40	
Total current into V_{CC+}		80	mA
Total current out of V_{CC-}		80	mA
Duration of short-circuit current at (or below) 25°C[(4)]		Unlimited	
Continuous total power dissipation		See *Dissipation Ratings*	
Operating free-air temperature range, T_A		–55 to 125	°C
Storage temperature range, T_{stg}		–65 to 150	°C
Case temperature for 60 seconds, T_C: FK package		260	°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds: JG package		300	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential voltages, are with respect to the midpoint between V_{CC+}, and V_{CC-}.
(3) Differential voltages are at IN+ with respect to IN –. Excessive current flows if a differential input voltage in excess of approximately ±600 mV is applied between the inputs unless some limiting resistance is used.
(4) The output is able to be shorted to either supply. Limit temperature, supply voltages, or both to not exceed the maximum dissipation ratings.

5.2 Dissipation Ratings

PACKAGE	$T_A \le 25°C$ POWER RATING	DERATING FACTOR ABOVE T_A = 25°C	T_A = 70°C POWER RATING	T_A = 85°C POWER RATING	T_A = 125°C POWER RATING
FK	1375 mW	11.0 mW/°C	880 mW	715 mW	275 mW
J−14	1375 mW	11.0 mW/°C	880 mW	715 mW	275 mW
JG−8	1050 mW	8.4 mW/°C	672 mW	546 mW	210 mW

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		M SUFFIX		UNIT

6.1 Typical Values

Typical values presented in this data sheet represent the median (50% point) of device parametric performance.

7 Detailed Description

7.1 Functional Block Diagram

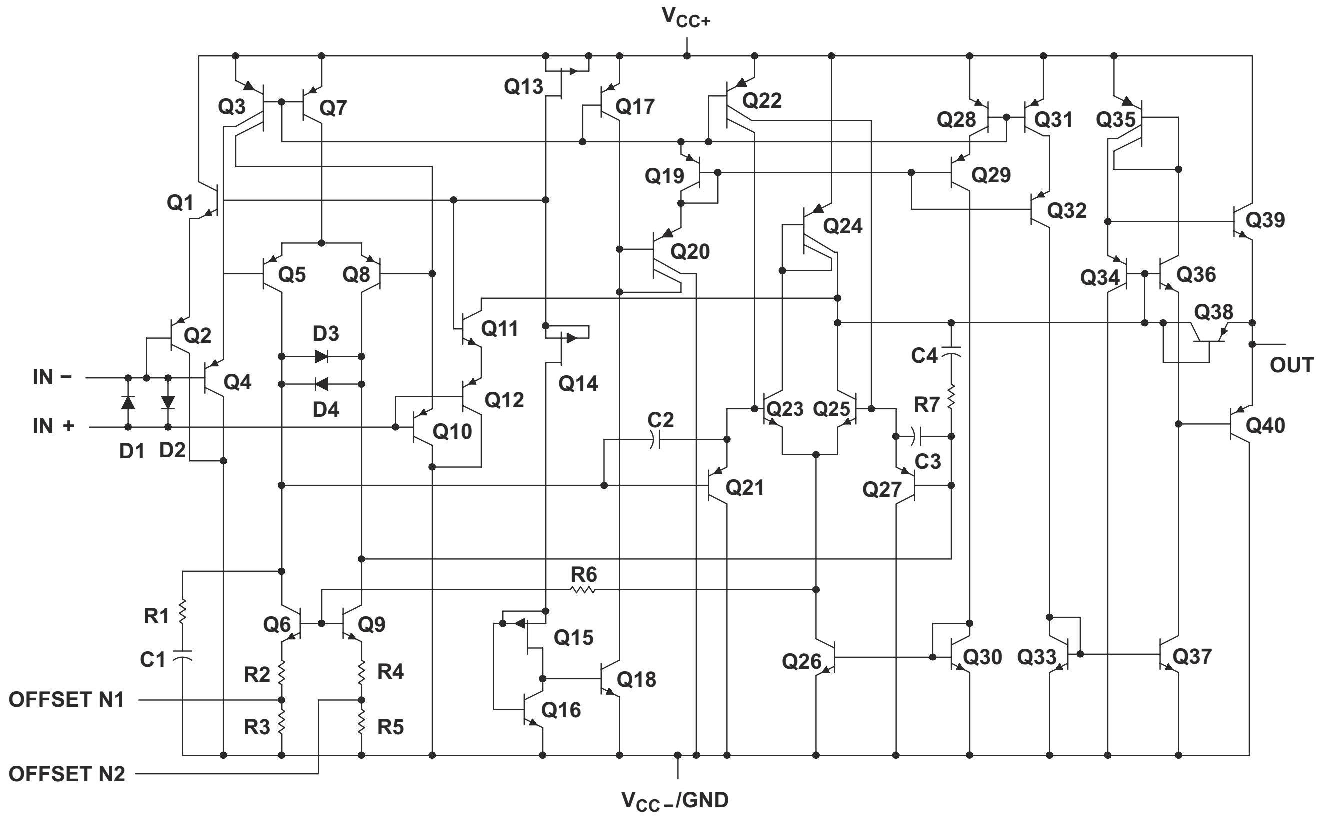

Figure 7-1. Equivalent Schematic (Each Amplifier)

Table 7-1. Actual Device Component Count

COMPONENT	TLE2021	TLE2022	TLE2024
Transistors	40	80	160
Resistors	7	14	28
Diodes	4	8	16
Capacitors	4	8	16

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Voltage-Follower Applications

The TLE202xM circuitry includes input-protection diodes to limit the voltage across the input transistors; however, no provision is made in the circuit to limit the current if these diodes are forward biased. This condition sometimes occurs when the device is operated in the voltage-follower configuration and driven with a fast, large-signal pulse. Use a feedback resistor to limit the current to a maximum of 1mA to prevent degradation of the device. This feedback resistor forms a pole with the input capacitance of the device. For feedback resistor values greater than 10kΩ, this pole degrades the amplifier phase margin. Figure 8-1 shows that to alleviate this problem, add a capacitor (20pF to 50pF) in parallel with the feedback resistor.

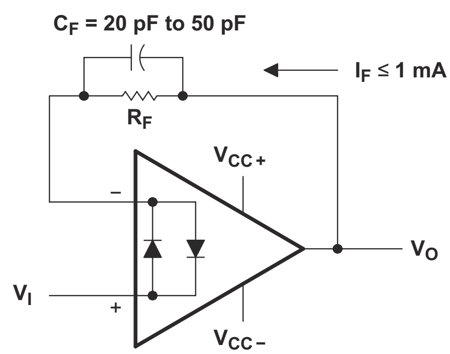

Figure 8-1. Voltage Follower

8.1.2 Input Offset Voltage Null

The TLE202xM series offers external null pins that further reduce the input offset voltage. Figure 8-2 shows how to connect the circuit if this feature is desired. When external null is not needed, leave the null pins disconnected.

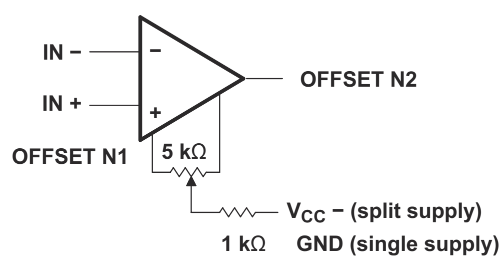

Figure 8-2. Input Offset Voltage Null Circuit

8.1.3 Macromodel Information

Macromodel information derived using Microsim Parts™, the model generation software used with PSpice™. The Boyle macromodel[1] (see subcircuit in Figure 8-3, Figure 8-4, and Figure 8-5) are generated using the TLE202x typical electrical and operating characteristics at 25°C. Using this information, output simulations of the following key parameters are generated to a tolerance of 20% (in most cases):

- Maximum positive output voltage swing
- Maximum negative output voltage swing
- Slew rate
- Quiescent power dissipation
- Input bias current
- Open-loop voltage amplification
- Unity-gain frequency
- Common-mode rejection ratio
- Phase margin
- DC output resistance
- AC output resistance
- Short-circuit output current limit

9 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

9.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

9.2 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

9.3 Trademarks

Microsim Parts™ and PSpice™ are trademarks of Cadence Design Systems, Inc..
TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

9.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.5 Glossary

TI Glossary	This glossary lists and explains terms, acronyms, and definitions.

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision D (November 2010) to Revision E (July 2025)	Page
• Deleted obsolete Y-suffix device and associated content from data sheet	1
• Deleted DB and PW packages and associated content from data sheet	1
• Moved D, DW, N, and P devices and associated content to SLVSJD7	1
• Updated the numbering format for tables, figures, and cross-references throughout the document	1
• Added application circuit to *Description*	1

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package | Pins	Package qty | Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

[4] **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

[5] **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

[6] **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

OTHER QUALIFIED VERSIONS OF TLE2021AM, TLE2024AM, TLE2024M :

- Catalog : TLE2021A, TLE2024A, TLE2024
- Automotive : TLE2021A-Q1, TLE2024-Q1
- Enhanced Product : TLE2021A-EP, TLE2024A-EP, TLE2024-EP

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Enhanced Product - Supports Defense, Aerospace and Medical Applications

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package can be hermetically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification.
5. Falls within MIL STD 1835 GDIP1-T8
