TLE206x,TLE206xA, TLE206xB FET-Input High-Output-Drive µPower Operational Amplifiers

1 Features

- Wide bandwidth: 1.1MHz GBW
- Low supply current: 120µA/Ch (typical)
- High output drive, specified into 100Ω loads
- Lower noise floor than earlier generations of low-power BiFET

2 Applications

- Full authority digital engine control
- Flight control unit
- Analog input module

3 Description

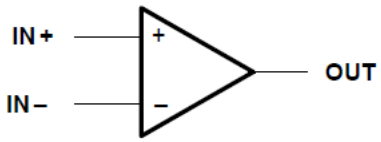

The TLE206x is a family of high voltage (36V) FET-Input operational amplifiers. These devices offer good DC precision and AC performance. This includes low noise floor and high slew rate, making TLE206x family a flexible, general-performance amplifier. TLE206x are available in standard packages PDIP and SOIC.

The TLE206xM, TLE206xAM, TLE206xBM devices use the original design with JFET-input transistors and On-chip Zener trimming of offset voltage. The TLE206xM, TLE206xAM, TLE206xBM are available in CDIP, LCCC and CFP package.

Package Information

PART NUMBER	PACKAGE(1)	PACKAGE SIZE(2)
TLE2061, TLE2062	P (PDIP, 8)	9.81mm × 9.43mm
	D (SOIC, 8)	4.9mm × 6mm
TLE2061A	P (PDIP, 8)	9.81mm × 9.43mm
TLE2062A	D (SOIC, 8)	4.9mm × 6mm
TLE2062AM	JG (CDIP, 8)	9.6mm × 6.67mm
	D (SOIC, 8)	4.9mm × 6mm
TLE2064, TLE2064A	N (PDIP, 14)	19.3mm × 9.4mm
	D (SOIC, 14)	8.65mm × 6mm
TLE2064M	FK (LCCC, 20)	8.89mm × 8.89mm
	J (CDIP, 14)	19.56mm × 6.67mm
	D (SOIC, 14)	8.65mm × 6mm
TLE2061M, TLE2061AM	JG (CDIP, 8)	9.6mm × 6.67mm
	FK (LCCC, 20)	8.89mm × 8.89mm
TLE2064BM	J (CDIP, 14)	19.56mm × 6.67mm
	FK (LCCC, 20)	8.89mm × 8.89mm
TLE2061BM, TLE2062BM, TLE2062M	JG (CDIP, 8)	9.6mm × 6.67mm
TLE2064AM	J (CDIP, 14)	19.56mm × 6.67mm
	CFP (W, 14)	9.21mm × 6.3mm
	FK (LCCC, 20)	8.89mm × 8.89mm
	D (SOIC, 14)	8.65mm × 6mm

(1) For more information, see Section 10.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.

	Case temperature for 60 seconds	FK package		260	°C
	Lead temperature 1,6mm (1/16 inch) from case for 10 seconds			260	°C
	Lead temperature 1,6mm (1/16 inch) from case for 60 seconds	JG package		300	°C
		U			
		W			

(1) Stresses beyond those listed under *Absolute Maximum Ratings* can cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods can affect device reliability.
(2) All voltage values are with respect to network ground terminal GND.
(3) Differential voltages are at IN+ with respect to IN –.
(4) Short-circuit to ground, one amplifier per package. Extended short-circuit current, especially with higher supply voltage, can cause excessive heating and eventual destruction.

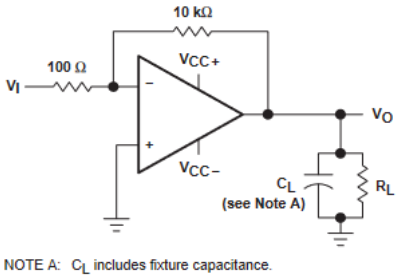

Figure 6-3. Unity-Gain Bandwidth and Phase-Margin Test Circuit

6.1 Typical Values

Typical values presented in this data sheet represent the median (50% point) of device parametric performance.

6.2 Input Bias and Offset Current

At the picoampere bias current level typical of the TLE206x, TLE2064xA, and TLE206xB, accurate measurement of the bias current becomes difficult. Not only does this measurement require a picoammeter, but test socket leakages can easily exceed the actual device bias currents. To accurately measure these small currents, Texas Instruments uses a two-step process. The socket leakage is measured using picoammeters with bias voltages applied but with no device in the socket. The device is then inserted into the socket and a second test that measures both the socket leakage and the device input bias current is performed. The two measurements are then subtracted algebraically to determine the bias current of the device.

7 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

7.1 Application Information

7.1.1 Input Characteristics

The TLE206x, TLE206xA, and TLE206xB are specified with a minimum and a maximum input voltage that, if exceeded at either input, can cause the device to malfunction. Due to the extremely high input impedance and resulting low bias current requirements, the TLE206x, TLE206xA, and TLE206xB are designed for low-level signal processing. However, leakage currents on printed circuit boards and sockets can easily exceed bias current requirements and cause degradation in system performance. To include guard rings around inputs (see Figure 7-1) is a good practice. Drive these guards from a low-impedance source at the same voltage level as the common-mode input

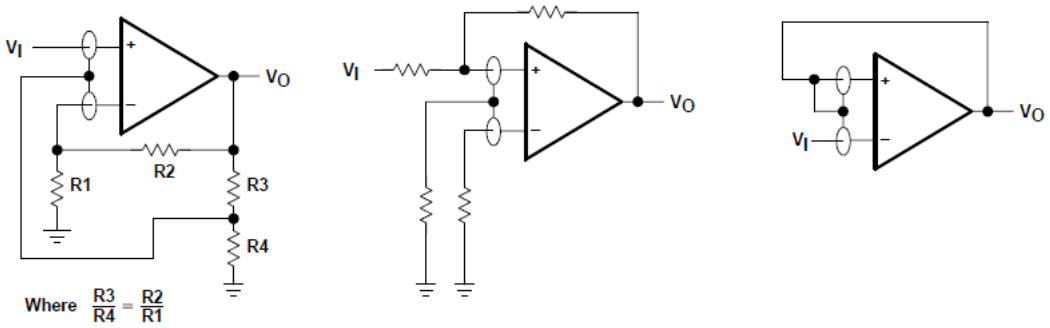

Figure 7-1. Use of Guard Rings

7.1.2 TLE2061 Input Offset Voltage Nulling

Some versions of TLE2061 series offers external null pins that can be used to further reduce the input offset voltage. The circuit can be connected if the feature is desired (see Figure 7-2). When external nulling is not needed, the null pins can be left unconnected.

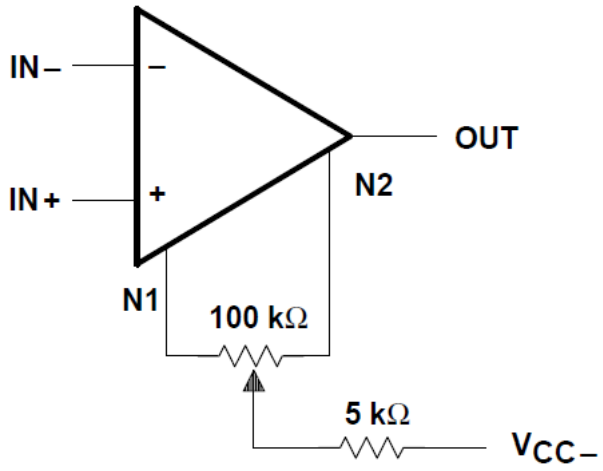

Figure 7-2. Input Offset Voltage Nulling

8 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

8.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

8.2 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

8.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

8.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

8.5 Glossary

TI Glossary	This glossary lists and explains terms, acronyms, and definitions.

9 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (July 2025) to Revision D (March 2026)	Page
• Updated Wide bandwidth from 2MHz to 1.1MHz GBW	1
• Updated Low supply current from 290µA/Ch to 120µA/Ch	1
• Updated Description as per latest die information	1
• Removed Ceramic Flat Pack (U) column	3
• Removed TSSOP (PW) column	3
• Updated Supply voltages V_{CC+} and $V_{CC–}$ to singleV_{CC+} −($V_{CC–}$) with minimum value 0V and maximum value 38V	6
• Removed Differential input voltage range minimum value of −38V	6
• Updated Differential input voltage range maximum value from 38V to V_{CC} +0.2V	6
• Removed Output current specification	6
• Removed Total current into and Total current out of specification	6
• Updated Duration of short-circuit current at (or below) 25°C to Continous	6
• Removed all references to D, P and PW package in Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	6
• Removed Input offset voltage long-term drift parameter in all *Electrical Characteristics* tables	7
• Updated Input capacitance parameter in all *Electrical Characteristics* tables excluding M suffix tables	7
• Updated Input offset current at 25°C from 1pA to ±5pA in all 5V *Electrical Characteristics* tables excluding M suffix tables	7
• Updated Input bias current at 25°C from 3pA to ±10pA in all 5V *Electrical Characteristics* tables excluding M suffix tables	7
• Updated Open-loop output impedance from 280Ω to 575Ω in all 5V *Electrical Characteristics* tables excluding M suffix tables	7
• Removed Equivalent input noise voltage maximum values in all *Operating Characteristics* tables	8
• Removed Unity-gain bandwidth parameter all *Operating Characteristics* tables excluding M suffix table	8
• Updated Phase margin at unity gain for R_L=10kΩ to 46° in all *Operating Characteristics* tables excluding M suffix table	8
• Removed Phase margin at unity gain for R_L=100Ω *Operating Characteristics* tables excluding M suffix table	8
• Updated Input offset current at 25°C from 2pA to ±5pA in all 15V *Electrical Characteristics* tables excluding M suffix tables	9
• Updated Input bias current at 25°C from 4pA to ±10pA in all 15V *Electrical Characteristics* tables excluding M suffix tables	9
• Removed all Y suffix tables	9
• Removed figure 5-6, 5-9, 5-10, 5-11, 5-12, 5-13, 5-14, 5-15, 5-16,5-17,5-18,5-19,5-20,5-22,5-23,5-24,5-25,5-26,5-27,5-28,5-35,5-36,5-38,5-39,5-40	40
• Added Offset Voltage vs Common-Mode Voltage plot	40
• Added Open-Loop Gain and Phase vs Frequency plot	40
• Added Phase Margin vs Capacitive Load plot	40

Changes from Revision B (May 2004) to Revision C (July 2025)	Page
• Added *Applications* section	1
• Updated typical offset to 0.1mV all test conditions and supply voltages	7
• Updated typical offset drift to 1µV/°C across all test conditions and supply voltages	7
• Updated typical open-loop gain to 225V/mV across all test conditions and supply voltages	7
• Updated typical quiescent current across all test conditions and supply voltages	7
• Updated typical output swing across all test conditions and supply voltages	7
• Updated typical slew rate to 4V/µs across all test conditions and supply voltages	7

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE OUTLINE

JG0008A

CDIP - 5.08 mm max height

CERAMIC DUAL IN-LINE PACKAGE

4230036/A 09/2023

NOTES:

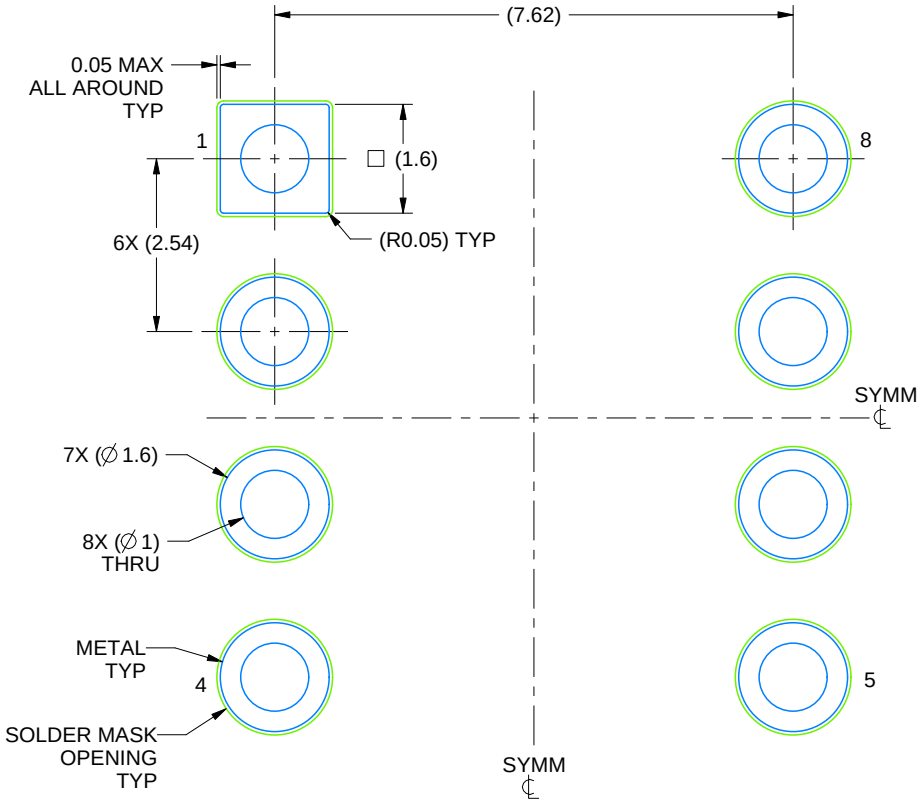

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package can be hermetically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification.
5. Falls within MIL STD 1835 GDIP1-T8

PACKAGE OUTLINE

D0014A

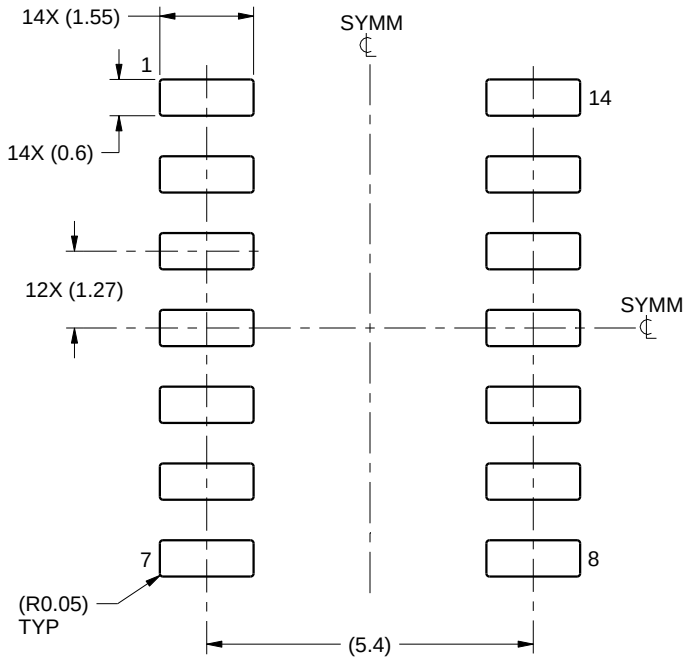

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

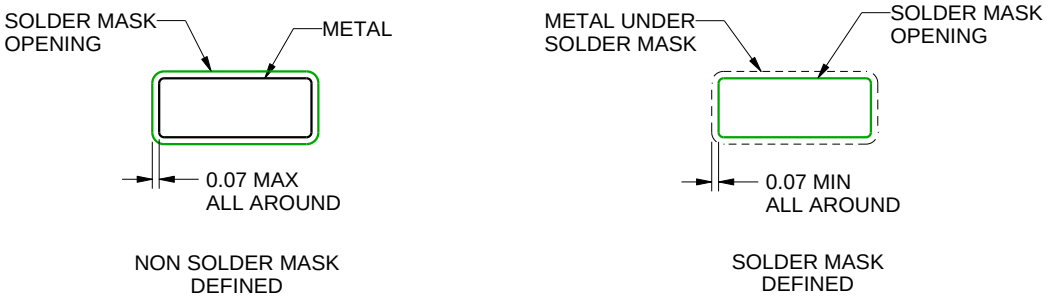

NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.43 mm, per side.
5. Reference JEDEC registration MS-012, variation AB.

LAND PATTERN EXAMPLE
SCALE:8X

SOLDER MASK DETAILS

4220718/A 09/2016

NOTES: (continued)

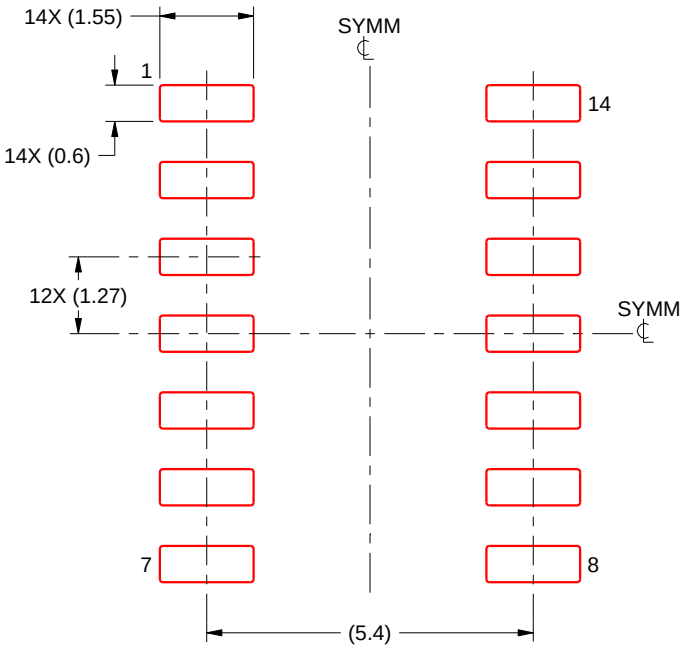

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:8X

4220718/A 09/2016

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

W (R–GDFP–F14) CERAMIC DUAL FLATPACK

NOTES:
A. All linear dimensions are in inches (millimeters).
B. This drawing is subject to change without notice.
C. This package can be hermetically sealed with a ceramic lid using glass frit.
D. Index point is provided on cap for terminal identification only.
E. Falls within MIL STD 1835 GDFP1–F14

PACKAGE OUTLINE

J0014A

CDIP - 5.08 mm max height

CERAMIC DUAL IN LINE PACKAGE

NOTES:

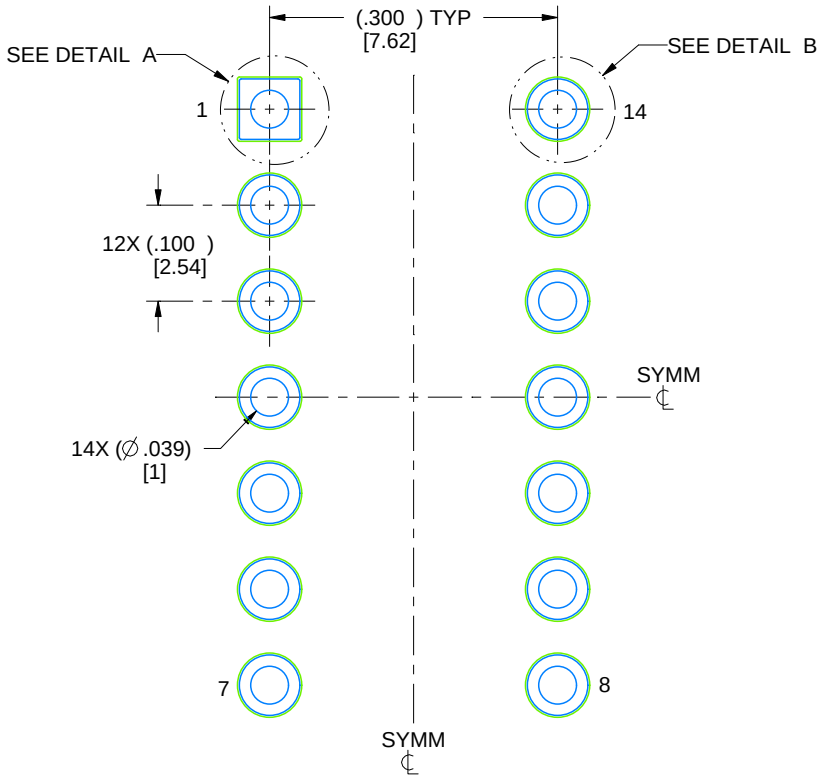

1. All controlling linear dimensions are in inches. Dimensions in brackets are in millimeters. Any dimension in brackets or parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package is hermitically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification only and on press ceramic glass frit seal only.
5. Falls within MIL-STD-1835 and GDIP1-T14.
