

# Microcontrollers in Flow Meters

Gas, water, and heat meters measure the volume of gas or liquid that passes through the meter.

Automatic meter reading (AMR) and advanced metering infrastructure (AMI) technologies add an additional layer of intelligence to traditional mechanical meters. These technologies improve meter-reading efficiency and provide more accurate and timely billing.

AMR enables automatic data collection, storage, and one-way communication from the meter to a meter-reading or data-collection device. Such a technology can offer customers and utility companies greater insight into consumption and flow information.

AMI enables two-way communication, bringing even more flexibility to metering systems and networks. The increased

communication and control allows for additional features such as remote system upgrades and remote valve control.

## **Why partner with TI Smart Grid Solutions?**

Choose from the broadest selection of low-power solutions that optimize your gas, water and heat meter systems. TI Smart Grid Solutions deliver:

- Innovation, expertise and support covering all the major functions of the flow meter
- Comprehensive hardware and software portfolios to meet specific system requirements
- Solutions that are compliant with standards such as IEC, ANSI, WMBus and ZigBee®

## **Microcontrollers for your gas, water and heat meter**

With TI's MSP430™ ultra-low-power microcontrollers, designers are given several design options to differentiate and to drive innovation with their meter designs. In addition to sensing, data-logging, processing and communications support, the MSP430 family enables rapid development for next-generation gas, water and heat meter systems.

	LCD	RF	MCU family of devices	Examples of key flow meter devices	Active mode	Standby mode
Flow meter MCUs with low-power scan interface unit	•		MSP430FW4xx	<b>MSP430FW429</b>	200 $\mu$ A/MHz	0.7 $\mu$ A
MCUs with embedded FRAM			MSP430FR57xx MSP430FR59xx	<b>MSP430FR5739</b> <b>MSP430FR5969</b>	80 $\mu$ A/MHz 100 $\mu$ A/MHz	1.5 $\mu$ A 0.5 $\mu$ A
General MCUs	•		MSP430F2xx MSP430F4xx	<b>MSP430F2272</b> <b>MSP430F4481</b>	270 $\mu$ A/MHz 280 $\mu$ A/MHz	0.7 $\mu$ A 1.1 $\mu$ A
High-performance MCUs	•		MSP430F5xx MSP430F6xx	<b>MSP430F5438A</b> <b>MSP430F6721</b>	230 $\mu$ A/MHz 256 $\mu$ A/MHz	1.7 $\mu$ A 1.7 $\mu$ A
MCU + RF SoC	•	•	CC430F51xx CC430F61xx	<b>CC430F5137</b> <b>CC430F6147</b>	160 $\mu$ A/MHz 160 $\mu$ A/MHz	2.0 $\mu$ A 1.0 $\mu$ A

For tools, software, and support options for your MSP430 microcontroller, visit [www.ti.com/msp430](http://www.ti.com/msp430).

## Key Flow Metering Solutions

Complement your microcontroller with other key flow metering solutions.

### RF communications

Integrate AMR/AMI abilities with RF ICs and protocols for the sub-1 GHz and 2.4 GHz frequency bands.

- Sub-1 GHz (CC11x1, CC112x, CC119x)
- 2.4 GHz (CC25xx, CC259x)
- wMBus Software (**WMBus protocol stack**)

### Power management

Optimize power consumption with solutions designed for battery-powered applications.

- DC/DC converters
  - Boost converters (TPS61xxx)
  - Buck converters (TPS62xxx)
  - Buck-boost converters (TPS63xxx)
- Power management ICs
  - Flow metering PMIC (TPS65290)

## Optional functionalities

Address additional design requirements for smart meters.

- Prepayment
  - RFID (TRF796xA)
  - RFID or NFC (TRF7970A)
- Low-voltage motor drivers for valve control
  - Brushed motors (DRV883x)
  - Stepper motors (DRV883x except DRV8830)

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
