

# Welcome!

# Texas Instruments New Product Update

- This webinar will be recorded and available at [www.ti.com/npu](http://www.ti.com/npu)
- Phone lines will be muted
- Please post questions in the chat or contact your sales person or field applications engineer

# TI 60GHz AWR6843AOP Incabin Sensing Solutions

# mmWave Sensors – Technology Overview, TI Advantages and Applications

## What is mmWave Technology

- mmWave sensors provide **range**, **velocity** and **angle** for detected objects with high accuracy
- mmWave technology **works in challenging environmental conditions** such as darkness, extreme bright light, dust, rain, snow and extreme temperatures

## Texas Instruments' mmWave Advantages

- **Single-chip, Low-power** sensing solution achieved through RFCMOS technology
- **Integrated processing** solutions remove the need for an external processor in the system
- **Scalable Portfolio** – SW re-use across Automotive & Industrial platforms, regardless of band
- **Antenna on Package** – Optimized solution simplifies design & manufacturing challenges
- **Imaging Radar** – Lidar-like performance at the right price point

## mmWave Applications

### Automotive

### Industrial

# mmWave sensors for occupancy detection

## Market Trends

Unattended child detection

Seat belt reminder

Air bag deployment control

Occupant Monitoring

## Why TI radar ?

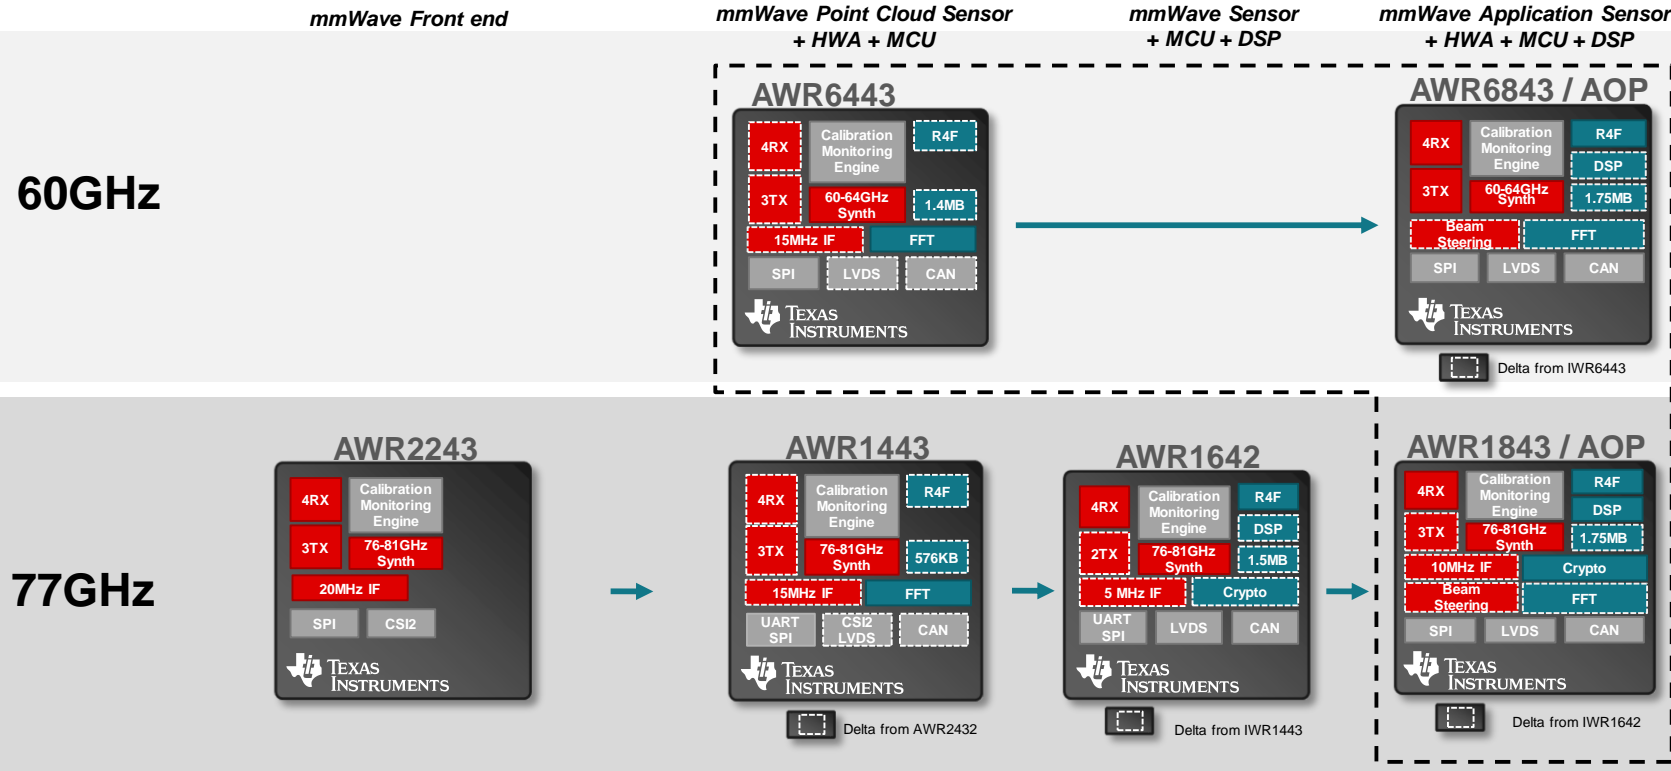

- Scalable platform to address all interior sensing needs (60 GHz and 77 GHz)
- Single chip and small form factor enables easy vehicle integration
- PPAP ready mature solution
- Faster TTM with reference design/partners

- **Active mmWave sensing** for high accuracy sensing compared to false detections prone passive sensors
- **EURO NCAP** driving sensing solution to detect newborn babies left behind – Need low cost edge sensors
- One mmWave sensor can replace multiple weight based sensors – **Cost benefit**

# TI 60GHz Radar – Portfolio Overview

AWR – Automotive  
IWR- Industrial

Pin-to-Pin  
Compatible

## Common Component / Reusable Software (SDK)

- **Frequency regulation agnostic design** : Pin 2 Pin compatibility with 60GHz and 77GHz sensors.
- **One Software Investment**: Common software API and framework across 60GHz and 77GHz devices make software re-usable and portable across devices.
- **Safety story**: ASIL B safety target for automotive applications

# Vehicle Occupant detection

Child left behind in car detection

Multi Zone Occupant Detection

## mmWave sensing

- Detects sleeping new born babies in rear facing child seats
- Detects even when covered by thick clothing
- No false alarms due to rain, shaking of car, water bottles
- Robust to heat, cold, different lighting conditions
- Detect intruders

## Performance Advantages:

- Small form factor < 50mm \* 50mm sensor size
- One sensor for detection of 5 occupants in 2 rows including child ( Child Presence, Seat Belt reminder, Intruder alert)
- Classification of occupants
- Flexible sensor placement (roof/front)

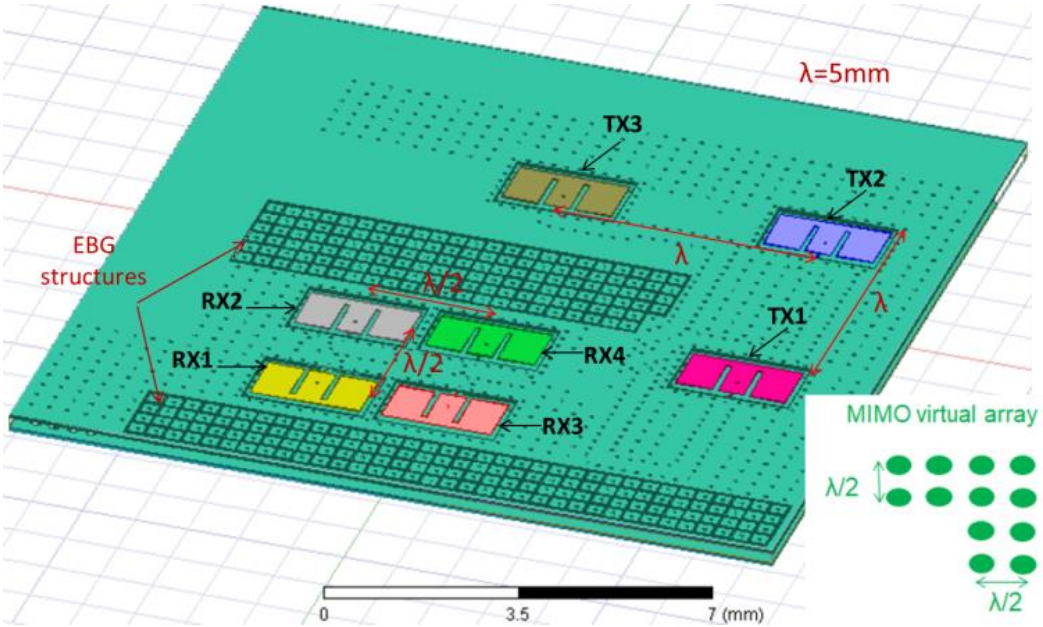

# Antenna on package technology

- 15mmx15mm embedded die fcCSP package
- AWR6843 silicon die with 4 receive and 3 transmit channels

**Array configuration**

- RX and TX elements are arranged to enable beam forming and detection with equal angular resolution in in both Az & EI directions

**Angular resolution**

- Azimuth: 29dZeg
- Elevation: 29deg

**Angle estimation Accuracy**

- Boresight: 1deg
- +/-80deg : 6deg

# Antenna On Package Benefits

## AOP Benefits

- ▶ **Small form factor**
- ▶ **Reduced complexity** for system design
  - ▶ Developers do not need RF EM expertise
  - ▶ Savings on antenna design cost and time
- ▶ **Reduced system cost**
  - ▶ Cheaper board solution (e.g. FR4)
  - ▶ Simpler board routing
  - ▶ Reduced PCB size and housing
- ▶ **Higher efficiency** (lower loss) compared to modules with similar antennas
- Sampling AWR6843AOP version now

# AWR6843AOP for Child presence detection tests

AWR6843AOP sensor in the over head position

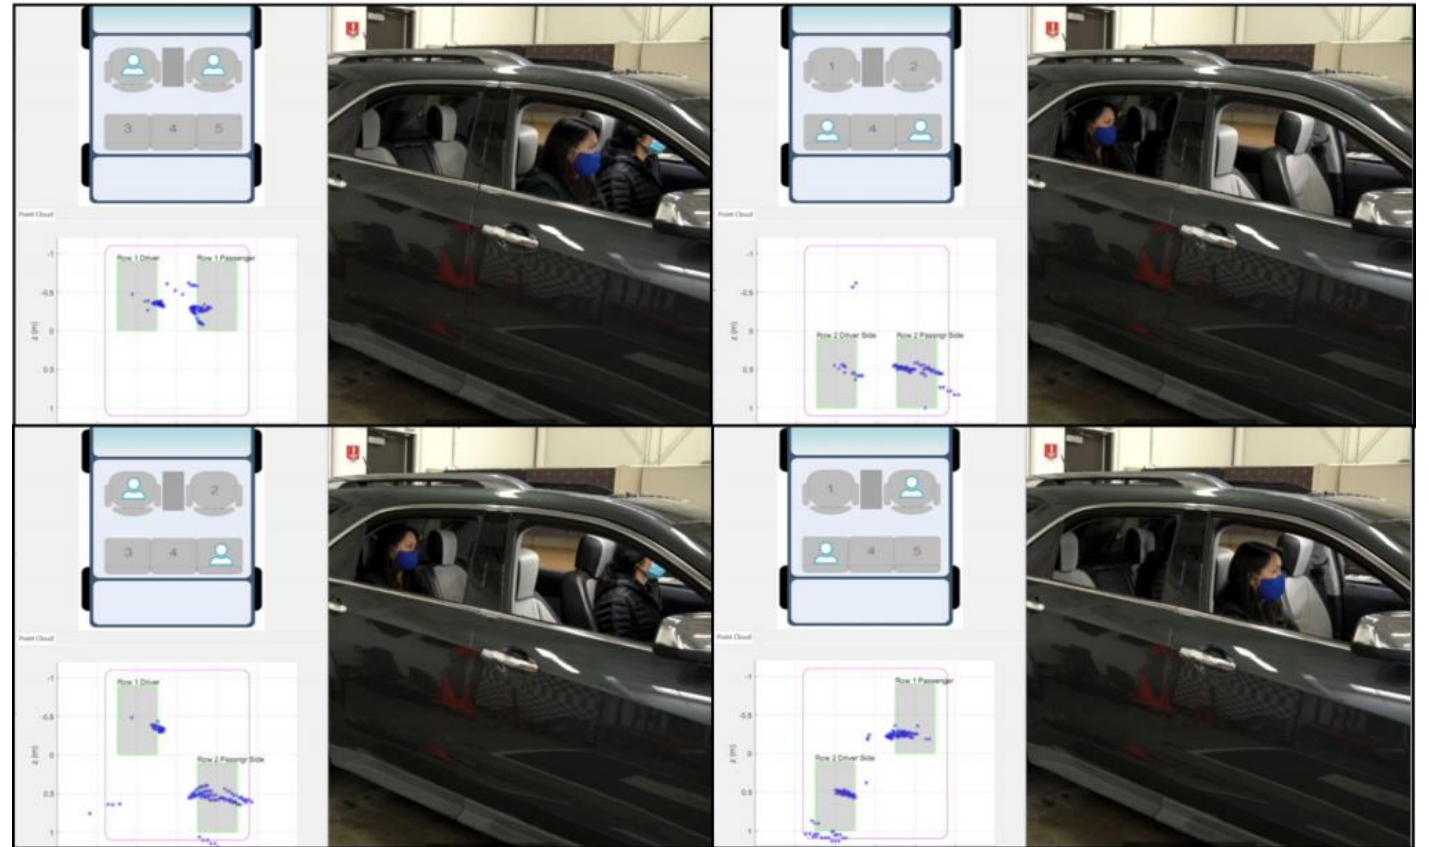

Child presence detected with child in different positions – in child seat, forward/rear facing, covered by blanket

# AWR6843AOP for occupant presence detection tests

AWR6843AOP sensor in the over head position

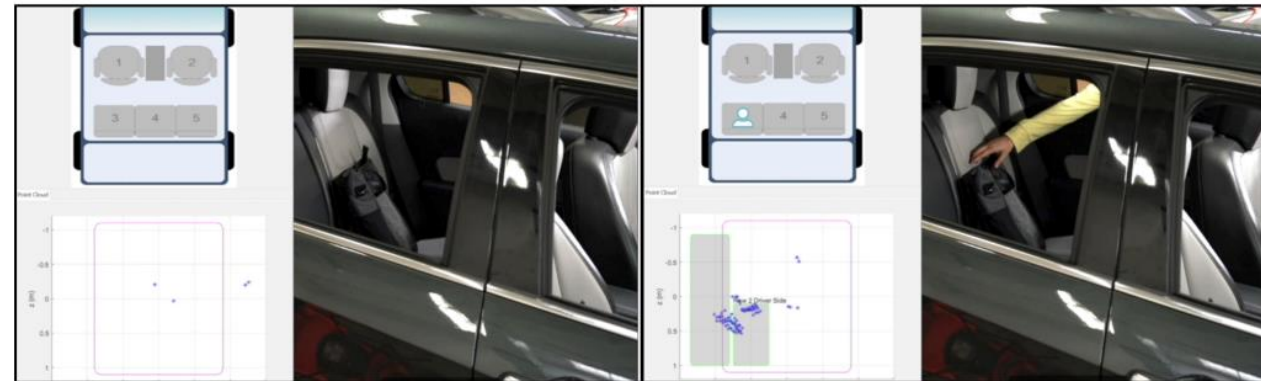

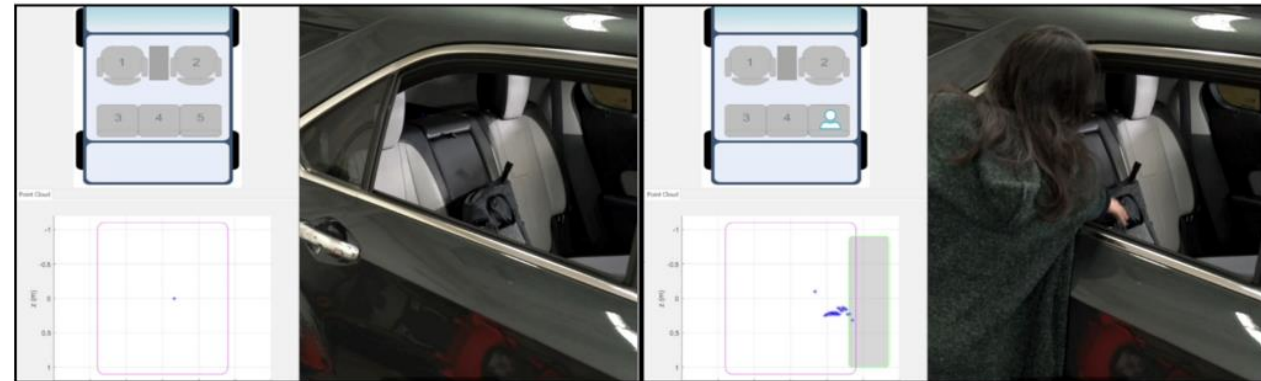

Detection of multiple occupants inside the car

# AWR6843AOP for intruder detection tests

AWR6843AOP sensor in the over head position

Detection of intruder trying to steal objects inside the car

# AWR6843AOP multimodal sensor

## Intruder Detection

- Detects intruders around car
- Operates in low power mode ( mW)
- Multi mode sensing

## Multi-row Occupant Detection

- Detects/Localize 5 occupants in 2 rows
- Classify occupants

# Incabin sensing 60GHz evaluation

	<b><u>AWR643AOPEVM</u></b>
Azimuth x Elevation FOV	120 deg x 120 deg
Azimuth/ Elevation resolution	29 deg
Sensor Position (Current SW Tested)	<b>Roof Mount:</b> Detect 4+ people in 2 rows CPD across 2 rows including footwell
Reference Software (Target C code)	<a href="#">LINK</a>
