

# Haptics

## Touch Feedback that Really Moves You

### Overview

Imagine feeling the rumble of the road in the palm of your hands, the stroke of a paintbrush as you complete your masterpiece, or the beat of a drum as you conclude your solo... all on your digital device. TI brings touch screens to life with haptics.

### What is Haptics?

Haptics enhance the user experience in digital devices by appealing to the one sense that often goes overlooked: touch. Haptics, by definition, refers to the sense of touch and is a technology that adds tactile feedback to electronic devices through the use of vibrations.

Touch screen devices with haptics can give your finger the impression you are pressing an actual button or your hand the feeling it is resting on a resonating guitar. The technology can be found in products you interact with every day, such as smartphones, tablets, and portable gaming consoles as well as medical and industrial products.

Texas Instruments offers a total touch solution, providing a complete line of touch products including touch screen controllers and haptic drivers.

### Benefits of Haptics

- Adds tactile feedback to touch screen devices
- Creates unique effects and sensations
- Provides reassuring touch confirmations
- Increases productivity while typing
- Creates differentiated products
- It's cool and fun!

### Haptics Ecosystem

The haptics ecosystem consists of three parts:

#### 1. Actuator

The actuator vibrates the device in a specific pattern. The type of actuator will determine the resolution and quality of the haptic effects.

#### 2. Driver

The driver is part of the electrical design and is the bridge between the controller and the actuator. Drivers can have either simple analog or intelligent digital interfaces and output high or low voltages depending on the type of actuator.

#### 3. Software

The software generates the haptic waveforms and can reside on an applications processor, microcontroller, or integrated driver depending on the availability in a system.

## Actuator Technologies & Comparison

Actuators create the physical vibrations used in haptics. There are three primary actuator technologies, each with their own unique characteristics and benefits.

### Eccentric Rotating Mass (ERM)

- Vibration method: A motor with an off-center mass that spins
- Effects: Creates strong vibrations for alerts, but lacks the precision for high-definition
- Very mature technology
- **Recommended TI drivers:** DRV2604, DRV2605

Eccentric Rotating Mass

### Linear Resonant Actuator (LRA)

- Vibration method: Spring mass system that oscillates in a linear motion
- Effects: Enhanced precision over ERMs; produces effects with various intensities at the actuator's resonant frequency
- Operating at the resonant frequency yields power savings
- **Recommended TI drivers:** DRV2604, DRV2605

Linear Resonant Actuator

### Piezo

- Vibration method: A strip or disk shaped piezo-electric material that bends when a voltage is applied
- Effects: Highest level of precision with varying intensity and frequency which creates high-definition effects
- Various form factors are available including strips, disks, and modules (strip + weight)
- **Recommended TI drivers:** DRV2665, **DRV2667**

Attributes	ERM	LRA	Piezo
Actuator Type	Inertial	Inertial	Piezo
Cost	\$	\$\$	\$\$\$
High Definition Haptics	No	No	Yes
Localized Haptics	No	No	Yes
Whole-Device Haptics	Yes	Yes	Yes
Drive Voltage	2.5 to 5.5 V (peak)	2 V (RMS)	30 to 50 V (pk-to-pk)
Control	DC	Amp Mod.	Large BW
Response Time	40 - 80 ms	20 - 30 ms	<<1 ms
Power Consumption	Poor	Best	Good
<b>TI Products</b>	<b>DRV8601, DRV2603, DRV2604, DRV2605</b>	<b>DRV8601, DRV2603, DRV2604, DRV2605</b>	<b>DRV8662, DRV2665, <b>DRV2667</b></b>

Preview products are listed in **bold blue**.

See TI's complete portfolio of solutions for touch technology at [ti.com/touch](http://ti.com/touch)

- Innovative haptics products for touch-screen enabled devices
- Cool solutions for buttons, sliders, and wheels featuring MSP430
- Touch screen controllers for a broad range of performance options

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
