

EVM User's Guide: ADS9308V8IEVM

ADS9308V8I Evaluation Module

Description

The ADS9308V8I evaluation module (EVM) is a platform for evaluating the performance of the ADS9308V8I, 16-channel, 24-bit, 100ksps/channel SAR ADC with integrated analog front-end and ADC reference. The ADS9308V8IEVM includes a standard FMC connector that can interface with standard FPGA development boards. Computer software that works with the TSWDC155EVM (sold separately) is provided to enable the user to communicate with the ADC over universal serial bus (USB), capture data, and perform data analysis.

Features

- EVM hardware features all required support circuitry for the ADS9308V8I, including power tree and ADC reference voltage options
- Easy-to-use evaluation software for Windows® 10 64-bit operating systems
- EVM software suite includes graphical tools for data capture and analysis
- Software for communications is facilitated with TSWDC155EVM data capture card (sold separately)

ADS9308V8IEVM

1 Evaluation Module Overview

1.1 Introduction

This EVM eases the evaluation of the ADS9308V8I device with hardware, software, and computer connectivity through the universal serial bus (USB) interface. This EVM user's guide includes complete circuit descriptions, schematic diagrams, and a bill of materials (BOM). Throughout this document, the terms *demonstration kit*, *evaluation board*, *evaluation module*, and *EVM* are synonymous with the ADS9308V8IEVM.

1.2 Kit Contents

The ADS9308V8IEVM kit comes with an evaluation module for ADS9308V8I. The [TSWDC155EVM](#) controller card is sold separately.

1.3 Specification

The ADS9308V8IEVM include the following features:

- ADS9308V8IEVM has the hardware required for diagnostic testing and accurate performance evaluation of the ADS9308V8I ADC
- Easy-to-use evaluation GUI for Microsoft® Windows 10, 64-bit operating systems requires the TSWDC155EVM (sold separately) for operation.

Figure 1-2 shows the connections and basic subsystems of the EVM.

Figure 1-1. System Using GUI and TSWDC155EVM

Figure 1-2. ADS9308V8IEVM Block Diagram

1.4 Device Information

The ADS9308V8IEVM is a platform for evaluating the performance of the ADS9308V8I SAR ADC with integrated analog front end for simultaneous current and voltage sensing, and maximum throughput of 100kSPS on each channel. The ADS9308V8I features eight zero-drift programmable gain amplifiers for current sensing with ESD protection of $\pm 8\text{kV}$, and eight low-drift programmable gain amplifiers (PGA) for voltage sensing with input impedance of $1\text{M}\Omega$. The eight current sense channels have the following input ranges: $\pm 25\text{mV}$, $\pm 50\text{mV}$, $\pm 100\text{mV}$, $\pm 150\text{mV}$, $\pm 200\text{mV}$. The eight voltage sense channels have the following input ranges: $\pm 12.5\text{V}$, $\pm 10\text{V}$, $\pm 6.25\text{V}$, $\pm 5\text{V}$, $\pm 2.5\text{V}$.

2 Hardware

2.1 ADS9308V8IEVM Quick Start Guide

The following instructions are a step-by-step guide for connecting the ADS9308V8IEVM to the computer and evaluating the performance of the ADS9308V8I.

1. Review the default jumper settings in [Figure 2-1](#) and the power guidelines in [Section 2.4.1](#).
2. **IMPORTANT:** Please set the J5 jumper on the TSWDC155EVM to the +1.8V option.
3. Physically connect J1 of the TSWDC155EVM to J22 of the ADS9308V8IEVM. This component is the digital communications and power signal connection in default configuration.
4. Set jumper JP1 to the FMC_PWR position so the TSWDC155EVM provides power. Otherwise, set JP1 to EXT_PWR and connect an external 5.2V to 5.5V supply on screw terminal connection J7.
5. Bypass any external USB hub and connect the USB on the TSWDC155EVM directly to the computer.

Figure 2-1. Connecting the Hardware

1. Install the GUI as described in [Section 3.1](#).
2. Install the necessary USB drivers as described in [Section 3.1.1](#).
3. Launch the GUI.
4. For ADS9308V8IEVM and GUI, press the *Board Startup* and *Initialize Device* buttons, in order, on the *Configuration* tab to power up and configure the EVM, (see [Section 3.2.1](#) for details).
5. Connect a 40mV_{PP}, differential sine wave signal from a function generator to any current sense channel (CH1 - CH8 on EVM) through the J1 header or connect a 9V_{PP}, differential sine wave signal to any voltage sense channel (CH9 - CH16 on EVM) through the J2 header.
6. Select the number of samples to be at least 32k points, and choose the Hanning window type for best frequency domain results.
7. Press the *Start Capture* button to collect and analyze the data displayed on the appropriate channel; see [Section 3.2](#) for more details.

2.2 Analog Interface

This section details the analog input connections to the ADS9308V8IEVM.

2.2.1 ADC Input SMA Connections

Each ADC current sense channel is connected to two pins on input header J1. Each ADC current voltage channel is connected to two pins on input header J2. 0402 footprints are provided to add a first-order, low-pass filter network on all ADC channels. By default, the filter capacitors are uninstalled and the filter resistors are populated with 0Ω. Use NP0/C0G type capacitors and low-tolerance resistors to maintain AC performance when choosing to populate these footprints with a low-pass filter circuit. Capacitors and resistors can also be used to protect the current sense input channels. For channel 1, for example, C1 can be populated with a 3nF capacitor and R11 and R12 can be populated with 499Ω resistors.

Additionally, resistors (like R1) can be populated to short AINxP and AINxM. Other resistors (like R2) can be populated to short inputs to GND.

Note

Please note, for header J1, the positive and negative polarity pins are switched. For example, 1P is actually 1M, and 1M is 1P. This will be edited in the next EVM revision.

Figure 2-2. Current Sense Input Channel

2.2.2 Voltage Reference

The ADS9308V8I uses an internal 4.096V reference voltage, which can be measured on the REFIO pin when configured as an output (default). For applications that require improved drift performance, configure the REFIO pin as an input and apply an external reference voltage to the pin. The REFIO pin can be configured through the REFSEL pin or by configuring an ADC register. To use the REFSEL pin, connect REFSEL to GND for the external reference or connect REFSEL to IOVDD for the internal reference. This can be done through the J21 header or through the R67 and R68 resistors.

The ADS9308V8IEVM include a provision for evaluating the REF5040 reference IC. The REF50xx family of high precision series voltage references offers low noise (3μV_{PP}/V), very low temperature drift coefficient (2.5ppm/°C), and high accuracy (±0.025%). To connect the REF5040 to the ADS9308V8I, configure the REFIO pin as an input via the GUI and then install a shunt on jumper JP2.

Figure 2-3. REF5040

Figure 2-5 shows the necessary decoupling capacitors for analog supplies, digital supplies, and ADC reference voltages.

Figure 2-5. Connections to ADS9308V8I

2.3.2 Level Translators

The ADS9308V8IEVM has level translators to shift 3.3V digital signals to 1.8V for use with the FPGA on the TSWDC155EVM. This is done for testing purposes. When using the ADS9308V8I on a user board and interfacing with an FPGA requiring 1.8V I/O levels, the level shifters are not necessary. The IOVDD voltage on the ADS9308V8I can be set to 1.8V directly. Instructions on how to configure the IOVDD voltage on the EVM can be found in [Power Supplies](#).

Figure 2-6. Level Translators

2.4 Power Supplies

By default, the TSWDC155EVM provides the ADS9308V8IEVM with a 3.3V supply (3P3V). The ADS9308V8IEVM has a TPS61070 boost converter that boosts the 3.3V supply to 5.4V. By default, this voltage is applied to low-dropout regulators (LDOs) to derive the AVDD_5V, AVDD_1V8, and IOVDD supplies when JP1 is in the [1-2] position. U5 (TPS7A2050) provides the 5V AVDD_5V supply, U6 (TPS7A2018) provides the AVDD_1V8 supply, and U4 (TPS7A2033) provides 3.3V for IOVDD, respectively. The LDO input voltage can be changed to an external source (5.2V to 5.5V) applied to terminal block J7 by placing a shunt on JP1 in the [2-3] position. In this case, U3 (LM66100) provides reverse polarity protection if the connection is wired incorrectly.

IOVDD can be either 1.8V or 3.3V. This allows ADS9308V8I the interface with both FPGAs and MCUs.

To set the IOVDD = 1.8V on the EVM:

- Populate R75 and depopulate R76

To set the IOVDD = 3.3V on the EVM:

- Populate U4 with TPS7A2033
- Populate R76 and depopulate R75

Figure 2-7 shows the power tree schematic for the ADS9308V8IEVM.

Figure 2-7. Power Entry and Regulators

2.4.1 USB Power and When to Power the Board Externally

As discussed in [Section 2.1](#), the USB-C® connector is able to provide power to the TSWDC155EVM and ADS9308V8IEVM using the default configuration.

The TSWDC155EVM is a high-power SuperSpeed (USB 3.0) device. This means a PC supplies up to 900mA from a compliant USB 3.0 port. However, many PC USB port configurations allow much less than this limit depending on the unit load handshake process, usually resulting from other devices on the bus. Tripping the current limit on a USB can result in cutting power to the USB port, excessive power dissipation or heating, depending on the PC port configuration. As a result, TI highly recommends to consider switching to an externally powered ADS9308V8IEVM and/or TSWDC155EVM if:

- Only USB 1.0 or USB 2.0 ports are available.
- There are multiple devices connected to the PC by USB at the same time.
- The USB 3.0 port configuration for the PC is unknown.

To switch to the external power configuration on the ADS9308V8IEVM, move the jumper on JP1 to the EXT_PWR [2-3] position and use the J7 terminal block to provide the required 5.2V to 5.5V supply. To switch to the external power configuration on TSWDC155EVM, move the jumper on J2 to the 5V (external) position and use the J10 terminal block or barrel jack connector to provide the required 5V supply.

USB hubs can cause possible device enumeration issues and are not recommended when communicating through the TSWDC155EVM.

3 Software

3.1 ADS9308V8IEVM Software Installation

This section details the installation and operation of the ADS9308V8IEVM software graphical user interface (GUI). This software requires the TSWDC155EVM (sold separately) controller to operate. The first step to installing the software (as shown in [Figure 3-1](#)) is to download the latest version of the EVM GUI installer as per [Table 3-1](#).

Table 3-1. EVM GUI Installers

EVM	Software Download Link
ADS9308V8IEVM	ADS9308V8IEVM-GUI

Accept all the license agreements and choose the destination location, project directory, and start menu. Typically, the default values work, but these values can be customized as needed based on the user's requirements.

Note

The GUI installer and GUI buttons can differ slightly depending on which specific GUI is being installed.

Figure 3-1. Initial Software Installation

Next, the installer prompts the user to create a desktop icon and summarize the installation plan. Selecting *Install* begins copying software onto the computer. This process takes a few minutes. At completion, the user can launch a readme text file and the application. Figure 3-2 shows these steps.

Figure 3-2. Installation Process

3.1.1 USB Driver Installation

This section describes the steps for installing the USB driver.

1. For the TSWDC155, connect J8 to the workstation using a USB-C to USB-A cable.
2. Bypass any USB hub and connect directly to the computer.
3. Open the Windows Device Manager, as shown in [Figure 3-3](#), and right-click on the *WestBridge* folder in the Device Manager window and select the *Update Driver* button (see [Figure 3-4](#)).
4. In the next window that appears, select *Browse my computer for driver software*.
5. Then select *Let me pick from a list of available drivers on my computer* in the next pop-up window.
6. Select *Have Disk* in the pop-up window and navigate to: *C:\Program Files\Texas Instruments\ADS9308V8IEVM-GUI\driver*

Figure 3-3. Open Device Manager

Figure 3-4. Update Driver With Device Manager

3.2 ADS9308V8IEVM Software (ADS9308V8IEVM-GUI)

3.2.1 Using Configuration Tab

After the EVM GUI is started, press the following buttons in the order shown below. After selecting the desired ADC from the drop-down menu, select **BOARD STARTUP**. After the **USB Status**, **FPGA Power**, and **FPGA Program** lights are green, select **INITIALIZE DEVICE**.

Figure 3-5. FPGA and ADC Initialization

The block diagram figures can be used to configure certain settings of the device. The "Device Registers" Tab can be used for more comprehensive device configuration. Press **REFRESH** on the block diagram to reflect updated device register settings.

Figure 3-6. GUI Block Diagram

3.2.2 Using the Data Capture Tab

Figure 3-7 and Figure 3-8 show example data capture time-domain display and FFT display, respectively. In this step, the necessary updates to the *Data Capture* settings are made to capture the time domain data and to get a good frequency domain result. First, update the number of samples to at least 32k to get good frequency domain results (for example, accurate FFT display, SNR data, and THD data). The *Input Frequency* needs to be set to the frequency of the applied input signal.

When these changes are made, press the *Start Capture* button to collect time domain and frequency domain data. The Data Plot tab shows the time domain data and the FFT Plot tab shows the frequency domain data. The FFT plot window also shows the SNR, THD and SINAD performance measurements. Different channel data can be shown or hidden using the *Channels* tab above the plot.

Figure 3-7. Time Domain Data

Figure 3-8. FFT Data

4 Hardware Design Files

4.1 Schematics

Figure 4-1 through Figure 4-5 show the various connections to the ADS9308V8I device. The digital signals connect to J22, as shown in Figure 4-5, and the analog signals connect to headers and input filtering. Figure 4-1 also shows the decoupling for the device.

TPS61070	SLVS510
TPS7A20	SBVS338
LM66100	SLVSEZ8
REF5040	SBOS410

STANDARD TERMS FOR EVALUATION MODULES

1. *Delivery:* TI delivers TI evaluation boards, kits, or modules, including any accompanying demonstration software, components, and/or documentation which may be provided together or separately (collectively, an "EVM" or "EVMs") to the User ("User") in accordance with the terms set forth herein. User's acceptance of the EVM is expressly subject to the following terms.
 - 1.1 EVMs are intended solely for product or software developers for use in a research and development setting to facilitate feasibility evaluation, experimentation, or scientific analysis of TI semiconductors products. EVMs have no direct function and are not finished products. EVMs shall not be directly or indirectly assembled as a part or subassembly in any finished product. For clarification, any software or software tools provided with the EVM ("Software") shall not be subject to the terms and conditions set forth herein but rather shall be subject to the applicable terms that accompany such Software
 - 1.2 EVMs are not intended for consumer or household use. EVMs may not be sold, sublicensed, leased, rented, loaned, assigned, or otherwise distributed for commercial purposes by Users, in whole or in part, or used in any finished product or production system.
2. *Limited Warranty and Related Remedies/Disclaimers:*
 - 2.1 These terms do not apply to Software. The warranty, if any, for Software is covered in the applicable Software License Agreement.
 - 2.2 TI warrants that the TI EVM will conform to TI's published specifications for ninety (90) days after the date TI delivers such EVM to User. Notwithstanding the foregoing, TI shall not be liable for a nonconforming EVM if (a) the nonconformity was caused by neglect, misuse or mistreatment by an entity other than TI, including improper installation or testing, or for any EVMs that have been altered or modified in any way by an entity other than TI, (b) the nonconformity resulted from User's design, specifications or instructions for such EVMs or improper system design, or (c) User has not paid on time. Testing and other quality control techniques are used to the extent TI deems necessary. TI does not test all parameters of each EVM. User's claims against TI under this Section 2 are void if User fails to notify TI of any apparent defects in the EVMs within ten (10) business days after delivery, or of any hidden defects with ten (10) business days after the defect has been detected.
 - 2.3 TI's sole liability shall be at its option to repair or replace EVMs that fail to conform to the warranty set forth above, or credit User's account for such EVM. TI's liability under this warranty shall be limited to EVMs that are returned during the warranty period to the address designated by TI and that are determined by TI not to conform to such warranty. If TI elects to repair or replace such EVM, TI shall have a reasonable time to repair such EVM or provide replacements. Repaired EVMs shall be warranted for the remainder of the original warranty period. Replaced EVMs shall be warranted for a new full ninety (90) day warranty period.

WARNING

Evaluation Kits are intended solely for use by technically qualified, professional electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems, and subsystems.

User shall operate the Evaluation Kit within TI's recommended guidelines and any applicable legal or environmental requirements as well as reasonable and customary safeguards. Failure to set up and/or operate the Evaluation Kit within TI's recommended guidelines may result in personal injury or death or property damage. Proper set up entails following TI's instructions for electrical ratings of interface circuits such as input, output and electrical loads.

NOTE:

EXPOSURE TO ELECTROSTATIC DISCHARGE (ESD) MAY CAUSE DEGRADATION OR FAILURE OF THE EVALUATION KIT; TI RECOMMENDS STORAGE OF THE EVALUATION KIT IN A PROTECTIVE ESD BAG.

3 Regulatory Notices:

3.1 United States

3.1.1 Notice applicable to EVMs not FCC-Approved:

FCC NOTICE: This kit is designed to allow product developers to evaluate electronic components, circuitry, or software associated with the kit to determine whether to incorporate such items in a finished product and software developers to write software applications for use with the end product. This kit is not a finished product and when assembled may not be resold or otherwise marketed unless all required FCC equipment authorizations are first obtained. Operation is subject to the condition that this product not cause harmful interference to licensed radio stations and that this product accept harmful interference. Unless the assembled kit is designed to operate under part 15, part 18 or part 95 of this chapter, the operator of the kit must operate under the authority of an FCC license holder or must secure an experimental authorization under part 5 of this chapter.

3.1.2 For EVMs annotated as FCC – FEDERAL COMMUNICATIONS COMMISSION Part 15 Compliant:

CAUTION

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Interference Statement for Class A EVM devices

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Interference Statement for Class B EVM devices

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

3.2 Canada

3.2.1 For EVMs issued with an Industry Canada Certificate of Conformance to RSS-210 or RSS-247

Concerning EVMs Including Radio Transmitters:

This device complies with Industry Canada license-exempt RSSs. Operation is subject to the following two conditions:

(1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Concernant les EVMs avec appareils radio:

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Concerning EVMs Including Detachable Antennas:

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication. This radio transmitter has been approved by Industry Canada to operate with the antenna types listed in the user guide with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Concernant les EVMs avec antennes détachables

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante. Le présent émetteur radio a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés dans le manuel d'usage et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

3.3 Japan

3.3.1 *Notice for EVMs delivered in Japan:* Please see http://www.tij.co.jp/sds/ti_ja/general/eStore/notice_01.page 日本国内に輸入される評価用キット、ボードについては、次のところをご覧ください。

<https://www.ti.com/ja-jp/legal/notice-for-evaluation-kits-delivered-in-japan.html>

3.3.2 *Notice for Users of EVMs Considered "Radio Frequency Products" in Japan:* EVMs entering Japan may not be certified by TI as conforming to Technical Regulations of Radio Law of Japan.

If User uses EVMs in Japan, not certified to Technical Regulations of Radio Law of Japan, User is required to follow the instructions set forth by Radio Law of Japan, which includes, but is not limited to, the instructions below with respect to EVMs (which for the avoidance of doubt are stated strictly for convenience and should be verified by User):

1. Use EVMs in a shielded room or any other test facility as defined in the notification #173 issued by Ministry of Internal Affairs and Communications on March 28, 2006, based on Sub-section 1.1 of Article 6 of the Ministry's Rule for Enforcement of Radio Law of Japan,
2. Use EVMs only after User obtains the license of Test Radio Station as provided in Radio Law of Japan with respect to EVMs, or
3. Use of EVMs only after User obtains the Technical Regulations Conformity Certification as provided in Radio Law of Japan with respect to EVMs. Also, do not transfer EVMs, unless User gives the same notice above to the transferee. Please note that if User does not follow the instructions above, User will be subject to penalties of Radio Law of Japan.

【無線電波を送信する製品の開発キットをお使いになる際の注意事項】 開発キットの中には技術基準適合証明を受けていないものがあります。技術適合証明を受けていないもののご使用に際しては、電波法遵守のため、以下のいずれかの措置を取っていただく必要がありますのでご注意ください。

1. 電波法施行規則第6条第1項第1号に基づく平成18年3月28日総務省告示第173号で定められた電波暗室等の試験設備でご使用いただく。
2. 実験局の免許を取得後ご使用いただく。
3. 技術基準適合証明を取得後ご使用いただく。

なお、本製品は、上記の「ご使用にあたっての注意」を譲渡先、移転先に通知しない限り、譲渡、移転できないものとします。

上記を遵守頂けない場合は、電波法の罰則が適用される可能性があることをご留意ください。 日本テキサス・インスツルメンツ株式会社
東京都新宿区西新宿 6 丁目 2 4 番 1 号
西新宿三井ビル

3.3.3 *Notice for EVMs for Power Line Communication:* Please see http://www.tij.co.jp/sds/ti_ja/general/eStore/notice_02.page

電力線搬送波通信についての開発キットをお使いになる際の注意事項については、次のところをご覧ください。<https://www.ti.com/ja-jp/legal/notice-for-evaluation-kits-for-power-line-communication.html>

3.4 European Union

3.4.1 *For EVMs subject to EU Directive 2014/30/EU (Electromagnetic Compatibility Directive):*

This is a class A product intended for use in environments other than domestic environments that are connected to a low-voltage power-supply network that supplies buildings used for domestic purposes. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

4 *EVM Use Restrictions and Warnings:*

4.1 EVMS ARE NOT FOR USE IN FUNCTIONAL SAFETY AND/OR SAFETY CRITICAL EVALUATIONS, INCLUDING BUT NOT LIMITED TO EVALUATIONS OF LIFE SUPPORT APPLICATIONS.

4.2 User must read and apply the user guide and other available documentation provided by TI regarding the EVM prior to handling or using the EVM, including without limitation any warning or restriction notices. The notices contain important safety information related to, for example, temperatures and voltages.

4.3 *Safety-Related Warnings and Restrictions:*

4.3.1 User shall operate the EVM within TI's recommended specifications and environmental considerations stated in the user guide, other available documentation provided by TI, and any other applicable requirements and employ reasonable and customary safeguards. Exceeding the specified performance ratings and specifications (including but not limited to input and output voltage, current, power, and environmental ranges) for the EVM may cause personal injury or death, or property damage. If there are questions concerning performance ratings and specifications, User should contact a TI field representative prior to connecting interface electronics including input power and intended loads. Any loads applied outside of the specified output range may also result in unintended and/or inaccurate operation and/or possible permanent damage to the EVM and/or interface electronics. Please consult the EVM user guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative. During normal operation, even with the inputs and outputs kept within the specified allowable ranges, some circuit components may have elevated case temperatures. These components include but are not limited to linear regulators, switching transistors, pass transistors, current sense resistors, and heat sinks, which can be identified using the information in the associated documentation. When working with the EVM, please be aware that the EVM may become very warm.

4.3.2 EVMs are intended solely for use by technically qualified, professional electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems, and subsystems. User assumes all responsibility and liability for proper and safe handling and use of the EVM by User or its employees, affiliates, contractors or designees. User assumes all responsibility and liability to ensure that any interfaces (electronic and/or mechanical) between the EVM and any human body are designed with suitable isolation and means to safely limit accessible leakage currents to minimize the risk of electrical shock hazard. User assumes all responsibility and liability for any improper or unsafe handling or use of the EVM by User or its employees, affiliates, contractors or designees.

4.4 User assumes all responsibility and liability to determine whether the EVM is subject to any applicable international, federal, state, or local laws and regulations related to User's handling and use of the EVM and, if applicable, User assumes all responsibility and liability for compliance in all respects with such laws and regulations. User assumes all responsibility and liability for proper disposal and recycling of the EVM consistent with all applicable international, federal, state, and local requirements.

5. *Accuracy of Information:* To the extent TI provides information on the availability and function of EVMs, TI attempts to be as accurate as possible. However, TI does not warrant the accuracy of EVM descriptions, EVM availability or other information on its websites as accurate, complete, reliable, current, or error-free.

6. *Disclaimers:*

6.1 EXCEPT AS SET FORTH ABOVE, EVMS AND ANY MATERIALS PROVIDED WITH THE EVM (INCLUDING, BUT NOT LIMITED TO, REFERENCE DESIGNS AND THE DESIGN OF THE EVM ITSELF) ARE PROVIDED "AS IS" AND "WITH ALL FAULTS." TI DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, REGARDING SUCH ITEMS, INCLUDING BUT NOT LIMITED TO ANY EPIDEMIC FAILURE WARRANTY OR IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER INTELLECTUAL PROPERTY RIGHTS.

6.2 EXCEPT FOR THE LIMITED RIGHT TO USE THE EVM SET FORTH HEREIN, NOTHING IN THESE TERMS SHALL BE CONSTRUED AS GRANTING OR CONFERRING ANY RIGHTS BY LICENSE, PATENT, OR ANY OTHER INDUSTRIAL OR INTELLECTUAL PROPERTY RIGHT OF TI, ITS SUPPLIERS/LICENSORS OR ANY OTHER THIRD PARTY, TO USE THE EVM IN ANY FINISHED END-USER OR READY-TO-USE FINAL PRODUCT, OR FOR ANY INVENTION, DISCOVERY OR IMPROVEMENT, REGARDLESS OF WHEN MADE, CONCEIVED OR ACQUIRED.

7. *USER'S INDEMNITY OBLIGATIONS AND REPRESENTATIONS.* USER WILL DEFEND, INDEMNIFY AND HOLD TI, ITS LICENSORS AND THEIR REPRESENTATIVES HARMLESS FROM AND AGAINST ANY AND ALL CLAIMS, DAMAGES, LOSSES, EXPENSES, COSTS AND LIABILITIES (COLLECTIVELY, "CLAIMS") ARISING OUT OF OR IN CONNECTION WITH ANY HANDLING OR USE OF THE EVM THAT IS NOT IN ACCORDANCE WITH THESE TERMS. THIS OBLIGATION SHALL APPLY WHETHER CLAIMS ARISE UNDER STATUTE, REGULATION, OR THE LAW OF TORT, CONTRACT OR ANY OTHER LEGAL THEORY, AND EVEN IF THE EVM FAILS TO PERFORM AS DESCRIBED OR EXPECTED.

8. *Limitations on Damages and Liability:*

8.1 *General Limitations.* IN NO EVENT SHALL TI BE LIABLE FOR ANY SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF THESE TERMS OR THE USE OF THE EVMS , REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. EXCLUDED DAMAGES INCLUDE, BUT ARE NOT LIMITED TO, COST OF REMOVAL OR REINSTALLATION, ANCILLARY COSTS TO THE PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, RETESTING, OUTSIDE COMPUTER TIME, LABOR COSTS, LOSS OF GOODWILL, LOSS OF PROFITS, LOSS OF SAVINGS, LOSS OF USE, LOSS OF DATA, OR BUSINESS INTERRUPTION. NO CLAIM, SUIT OR ACTION SHALL BE BROUGHT AGAINST TI MORE THAN TWELVE (12) MONTHS AFTER THE EVENT THAT GAVE RISE TO THE CAUSE OF ACTION HAS OCCURRED.

8.2 *Specific Limitations.* IN NO EVENT SHALL TI'S AGGREGATE LIABILITY FROM ANY USE OF AN EVM PROVIDED HEREUNDER, INCLUDING FROM ANY WARRANTY, INDEMNITY OR OTHER OBLIGATION ARISING OUT OF OR IN CONNECTION WITH THESE TERMS, , EXCEED THE TOTAL AMOUNT PAID TO TI BY USER FOR THE PARTICULAR EVM(S) AT ISSUE DURING THE PRIOR TWELVE (12) MONTHS WITH RESPECT TO WHICH LOSSES OR DAMAGES ARE CLAIMED. THE EXISTENCE OF MORE THAN ONE CLAIM SHALL NOT ENLARGE OR EXTEND THIS LIMIT.

9. *Return Policy.* Except as otherwise provided, TI does not offer any refunds, returns, or exchanges. Furthermore, no return of EVM(s) will be accepted if the package has been opened and no return of the EVM(s) will be accepted if they are damaged or otherwise not in a resalable condition. If User feels it has been incorrectly charged for the EVM(s) it ordered or that delivery violates the applicable order, User should contact TI. All refunds will be made in full within thirty (30) working days from the return of the components(s), excluding any postage or packaging costs.
10. *Governing Law:* These terms and conditions shall be governed by and interpreted in accordance with the laws of the State of Texas, without reference to conflict-of-laws principles. User agrees that non-exclusive jurisdiction for any dispute arising out of or relating to these terms and conditions lies within courts located in the State of Texas and consents to venue in Dallas County, Texas. Notwithstanding the foregoing, any judgment may be enforced in any United States or foreign court, and TI may seek injunctive relief in any United States or foreign court.
