

# HIGH VOLTAGE SEMINAR

## WEI ZHANG

### ISOLATED GATE DRIVERS

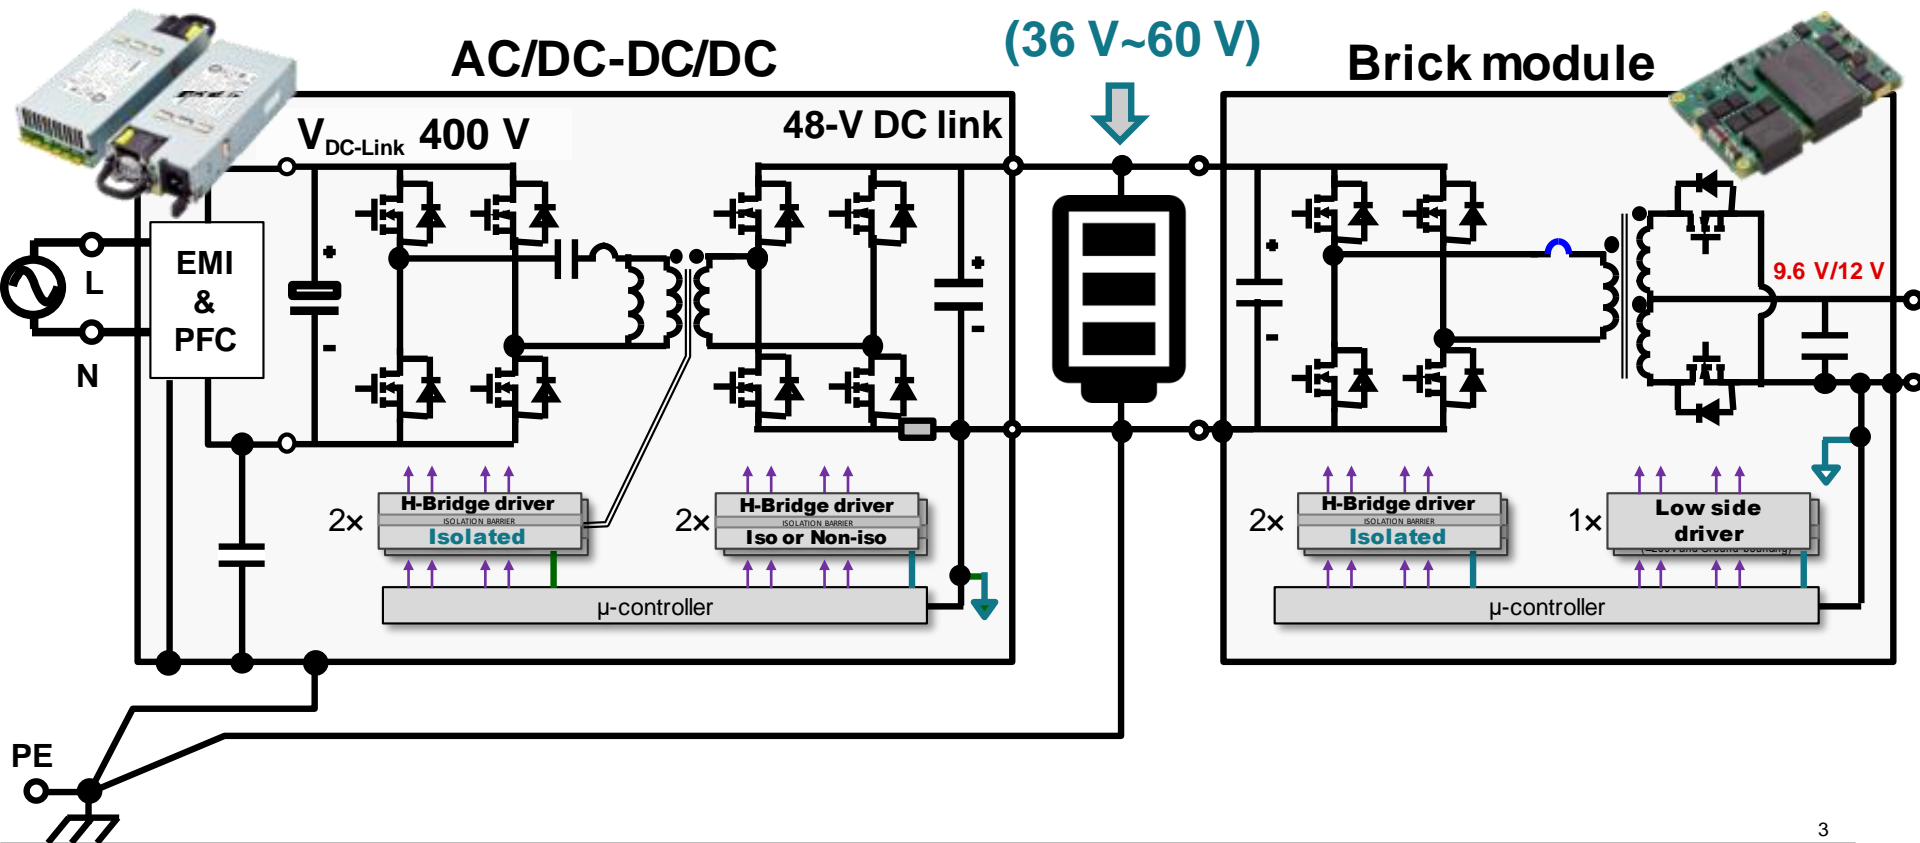

ISOLATED GATE DRIVER 101:  
FROM INSULATION SPEC TO END  
EQUIPMENT REQUIREMENTS

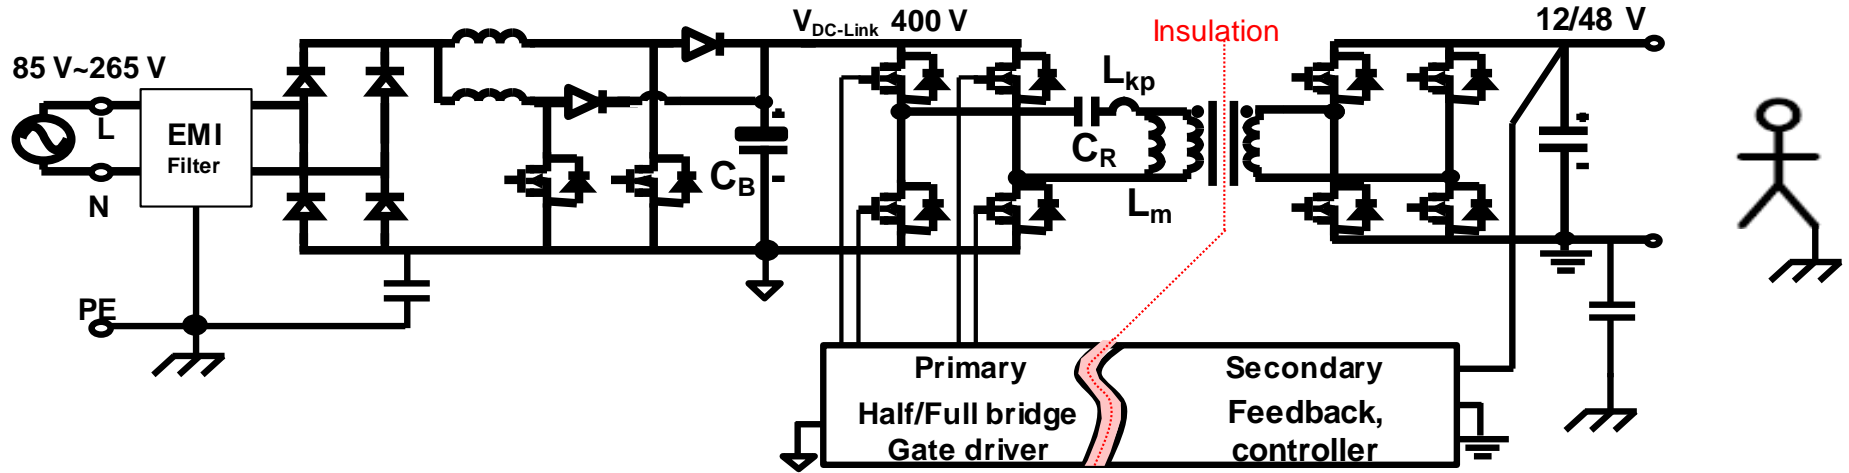

# Agenda

- Isolated gate driver fundamentals
- Insulation specification and verification
- Requirements of isolated gate drivers in popular applications
- Questions

# Isolated driver in server/telecom

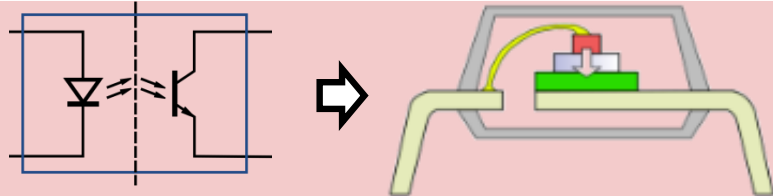

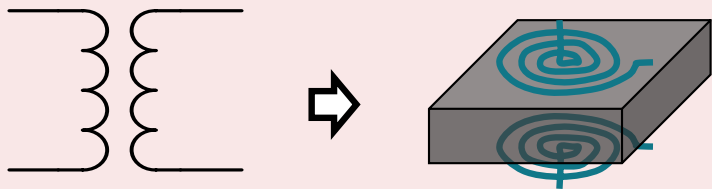

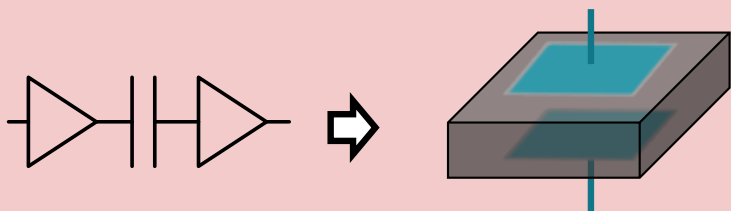

# Why is isolation required?

1. Power delivery –  $V_1/V_2=N_1/N_2$
2. Signal Communication
3. Safety
4. Breaking ground loop – CM noise
5. High voltage >800 V
6. Performance: high CMTI

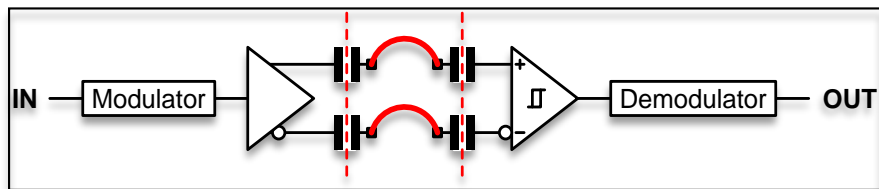

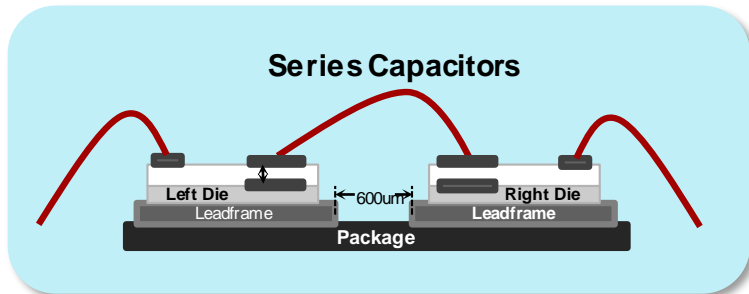

# Types of isolation methods in gate drivers

Technology	Advantages	Simplified diagram
Optical	<ul style="list-style-type: none"> <li>➤ Long history</li> <li>➤ Low emissions</li> </ul>	
Inductive	<ul style="list-style-type: none"> <li>❖ High speed data</li> <li>❖ Low power</li> <li>❖ CMTI</li> <li>❖ Low ch-ch skew</li> <li>❖ High temp</li> </ul>	
Capacitive	<ul style="list-style-type: none"> <li>❑ High speed data</li> <li>❑ Low power</li> <li>❑ CMTI</li> <li>❑ Low channel-channel skew</li> <li>❑ High temp</li> <li>❑ <b>High working voltage</b></li> </ul>	

# Types of isolation grades

- **Functional isolation**
  - *For protecting circuits*
  - *→ Gnd bounce, high voltage, transient between secondary circuits*
- **Basic isolation**
  - Single level of isolation to protect against electric shock
- **Supplementary isolation**
  - Independent insulation if single level fails
- **Double isolation**
  - Basic + Supplementary → *For human safety which requires redundancy*
- **Reinforced isolation**
  - **A single** insulation system that provides same ratings as double insulation

# An example: reinforced capacitive isolation

- Reinforced isolation is realized by thick SiO<sub>2</sub> capacitors combined in series
  - Each channel uses high voltage isolation capacitors on both die
- Combined isolation capacitor thickness is >21 μm
- 12.8 kV<sub>PK</sub> surge voltage, 8 kV<sub>PK</sub> transient over-voltage, 1.5 kV<sub>RMS</sub> working voltage

# Example: insulation spec. of an isolated gate driver

## 6.6 Insulation Specifications

## IEC/EN/DIN EN 60747-5-5 Insulation Characteristics\* (Option)

PARAMETER		TEST CONDITIONS		Description	Symbol
CLR	External clearance <sup>(1)</sup>	Shortest pin-to-pin distance through air			
CPG	External creepage <sup>(1)</sup>	Shortest pin-to-pin distance across the package			
DTI	Dist. $V_{IORM}$	Maximum repetitive peak isolation voltage	AC voltage (bipolar)	Installation classification per DIN VDE 0110/39, Table 1 for rated mains voltage $\leq 150V_{RMS}$ for rated mains voltage $\leq 300V_{RMS}$ for rated mains voltage $\leq 450V_{RMS}$ for rated mains voltage $\leq 600V_{RMS}$ for rated mains voltage $\leq 1000V_{RMS}$	
CTI	Com. $V_{IOWM}$	Maximum working isolation voltage	AC voltage (sine wave); time dependent (TDDB), test (See Figure 1)		
	Mat. $V_{IOWM}$		DC voltage		
	Over IEC $V_{IOTM}$	Maximum transient isolation voltage	$V_{TEST} = V_{IOTM}$ , $t = 60$ sec (qualification) $V_{TEST} = 1.2 \times V_{IOTM}$ , $t = 1$ s (100%)		
	$V_{IOSM}$	Maximum surge isolation voltage <sup>(3)</sup>	Test method per IEC 62368-1, 1.2.4 $V_{TEST} = 1.6 \times V_{IOSM} = 12800 V_{PK}$ (60/60 Hz)		
	Pollu. Clim.	Apparent charge <sup>(4)</sup>	Method a, After Input/Output safety tests $V_{ini} = V_{IOTM}$ , $t_{ini} = 60$ s; $V_{pd(m)} = 1.2 \times V_{IORM} = 2545 V_{PK}$ , $t_{pd} = 1$ s	Climatic Classification	
UL 1577	With $q_{pd}$		Method a, After environmental tests $V_{ini} = V_{IOTM}$ , $t_{ini} = 60$ s; $V_{pd(m)} = 1.6 \times V_{IORM} = 3394 V_{PK}$ , $t_{pd} = 1$ s	Pollution Degree (DIN VDE 0110/39)	
$V_{ISO}$			Method b1; At routine test preconditioning (type test) $V_{ini} = 1.2 \times V_{IOTM}$ , $t_{ini} = 1$ s; $V_{pd(m)} = 1.875 \times V_{IORM} = 3977 V_{PK}$ , $t_{pd} = 1$ s	Maximum Working Insulation Voltage	$V_{IORM}$
				Input to Output Test Voltage, Method b* $V_{IORM} \times 1.875 = V_{PR}$ , 100% Production Test with $t_m = 1$ sec, Partial discharge $< 5$ pC	$V_{PR}$
				Input to Output Test Voltage, Method a* $V_{IORM} \times 1.6 = V_{PR}$ , Type and Sample Test, $t_m = 10$ sec, Partial discharge $< 5$ pC	$V_{PR}$
				Highest Allowable Overvoltage* (Transient Overvoltage $t_{ini} = 60$ sec)	$V_{IOTM}$
				Safety-limiting values – maximum values allowed in the event of a failure	
				Case Temperature	$T_S$
				Input Current	$I_S, INPUT$
				Output Power	$P_S, OUTPUT$
				Insulation Resistance at $T_S$ , $V_{IO} = 500V$	$R_S$

# What is the purpose?

❑ **Capability verification** for basic, supplementary and reinforced insulation barrier to withstand

1. **Electrical** stresses

2. **Mechanical** stresses

as well as

3. **Thermal** and **environmental** influences

which may occur during the anticipated life of the equipment

# Standards – a broad categorization

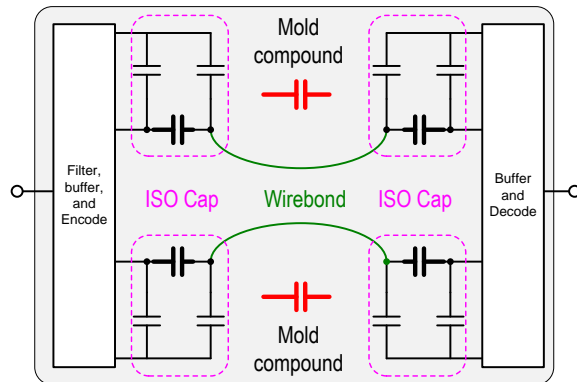

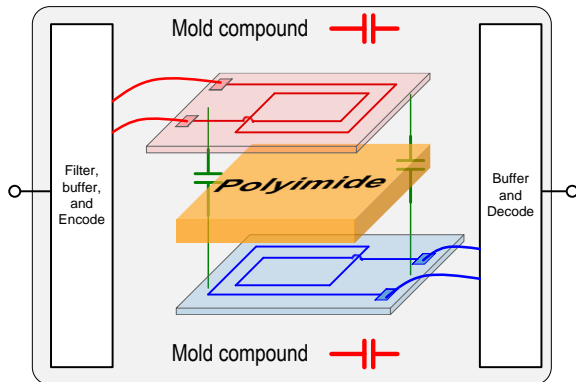

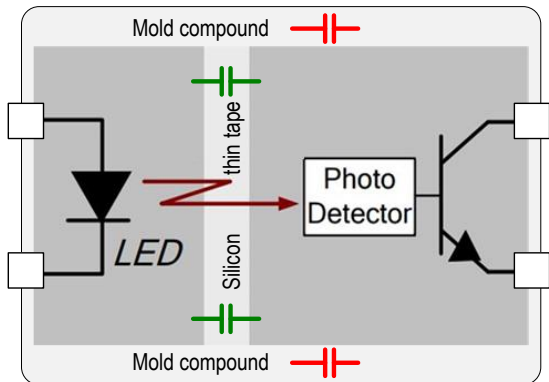

Category	Standards	Coverage	Terminologies
Component standard	IEC 60747-5-5 (VDE 0884-5-5)	Opto-couplers only	$R_{IO}/C_{IO}$ , $V_{ISO}/V_{IOTM}$ , $V_{IORM}$ , $V_{IOSM}$ , $V_{IOWM}$ , CMTI, $q_{pd}$ , CTI,
	IEC60747-17 (release soon)	Magnetic and capacitive coupler	
	VDE 0884-10, -11		Above spec “ $-V_{ISO}$ , +TDDB”
	UL 1577	Opto-couplers & digital isolator	$V_{ISO}$
Equipment standard	IEC 60601-1	Medical equipment	
	IEC 61010-1	Measurement, control and lab	
	IEC 60950-1 & IEC 62368-1	Information Technology up to 600 V	CLR, CPG, Pollution Degree, Material Group, Over voltage category
Supporting standard	IEC 60664-1	Insulation coordination for low-voltage systems	

# $R_{IO}$ , $C_{IO}$

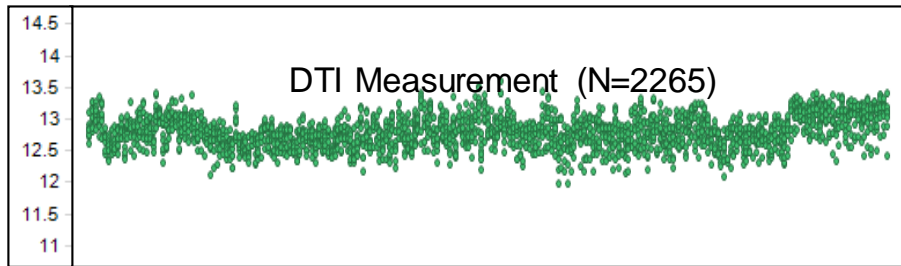

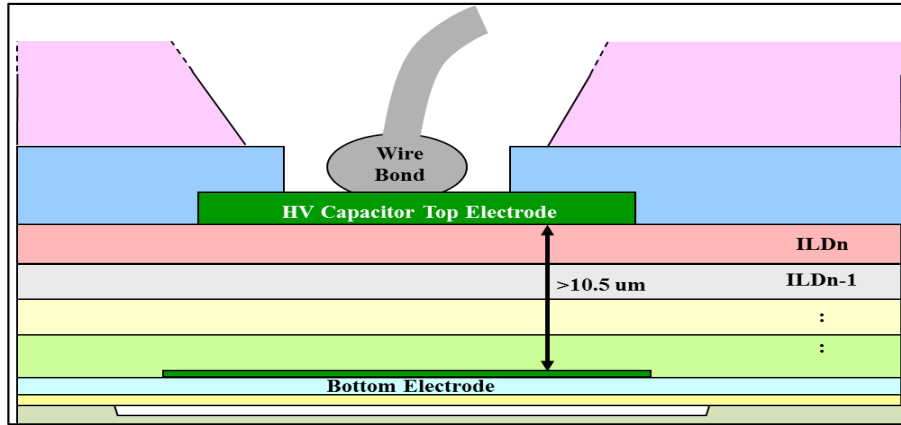

## □ $C_{IO}$ – Input-to-output capacitance

- The total capacitance between all input terminals connected together and all output terminals connected together
- $F = 1 \text{ MHz}$ ,  $I_F = 0$ ,  $I_C = 0$ ,  $V_{IO} = 0.4 \sin(\omega t)$
- Capacitance meter
- Resistance meter ( $V_{IO} = 500 \text{ V}$ )

Temp	Requirement
$T_{amb}$	$> 10^{12} \Omega$
$T_{amb.max}$	$> 10^{11} \Omega$
$T_S$	$> 10^9 \Omega$

# DTI: Distance Through Insulation

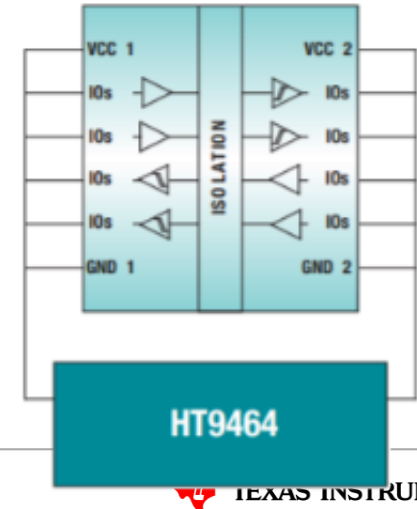

Mean = 12.79um w/ 0.25um StDev, CPK=3.1

- ❑ **Thickness** is directly related to breakdown voltage
- ❑ **Reinforced** barrier consists of **two** high voltage capacitors
  - HV Caps on each die
- ❑ Each capacitor has a thick **SiO<sub>2</sub>** dielectric > 10.5  $\mu\text{m}$

# $V_{ISO}$ , $V_{IOTM}$ : isolation withstand voltage

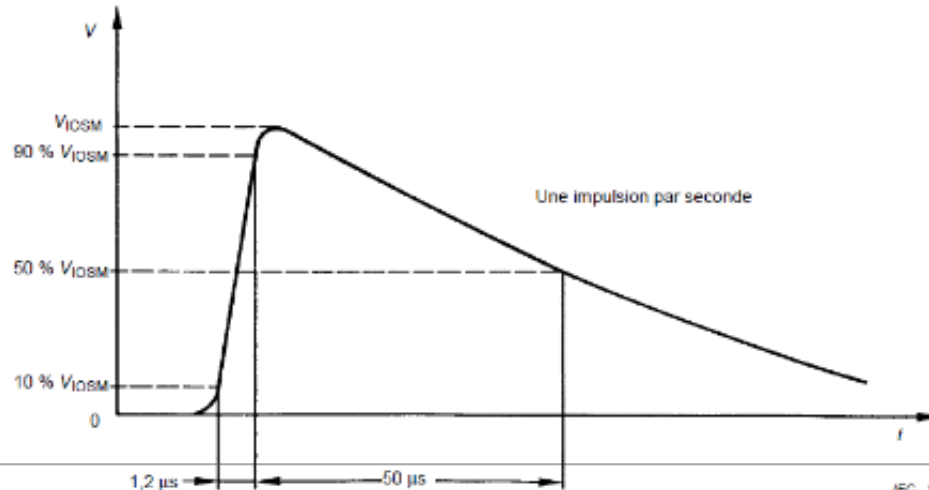

- ❑  $V_{ISO}$  – Maximum withstanding isolation a.c. (r.m.s.) voltage for 1 min
  - UL1577 specifies test either using DC or AC voltage source
- ❑  $V_{IOTM}$  – Maximum transient isolation voltage (A peak value) =  $1.414 \times V_{ISO}$ 
  - **Purpose** – verify the ability of the device to withstand the isolation test voltage under specified conditions for a short period, i.e. arcing, load change
  - AC voltage with commercial frequency for 1 min
  - **Routine test**
    - IEC: 1 s or 2 s is at 100% or maximum 120% of 1 min rating
    - UL: 1 s at  $\geq 120\%$
  - $T_A = 25^\circ\text{C}$
  - Requirements
    - Ext. or int. flash-over shall not occur during the test
    - Shall **pass the post-test measurements**

# $V_{IOWM}$ and $V_{IORM}$

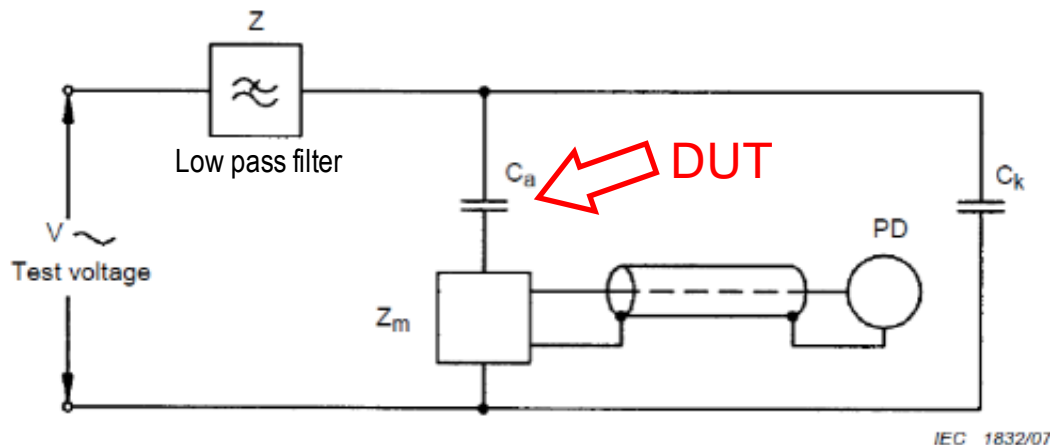

- ❑  $V_{IOWM}$  – Maximum working isolation voltage
  - Characterizing the specified **long term or the working voltage** withstand capability of the isolation
  - **r.m.s voltage** includes equivalent d.c. voltage
  
- ❑  $V_{IORM}$  – Maximum repetitive **peak** isolation voltage
  - A repetitive **peak value** of withstand voltage, characterizing the specified withstand capability of its isolation against repetitive peak voltages
  - **$V_{IORM} = 1.414 \times V_{IOWM}$  for most datasheets**
  - ❖ The degradation of the galvanic isolation **depends normally on the peak voltage**,  $V_{IORM}$  is the repetitive peak value of the absolute envelop voltage over time.

- ❑ V<sub>IOSM</sub> – Maximum surge isolation voltage (**type test only**)
  - The **highest instantons value of an isolation voltage pulse** with short time duration and of specified wave shape
  - ❖ **Goal:** Verifies the DUT's immunity to very high voltage levels over a short period of time, e.g. lightening strike
  - One pulse per second, 50 consecutive surge pulses

# $Q_{pd}$ : apparent charge caused by partial discharge

- ❑ An electric discharge that only partially bridge the insulation between conductors
- ❑ **Goal** – to verify the performance of insulation between input and output of a insulator by measuring the partial discharge level under specified conditions
- ❑ Requirement: <5 pC

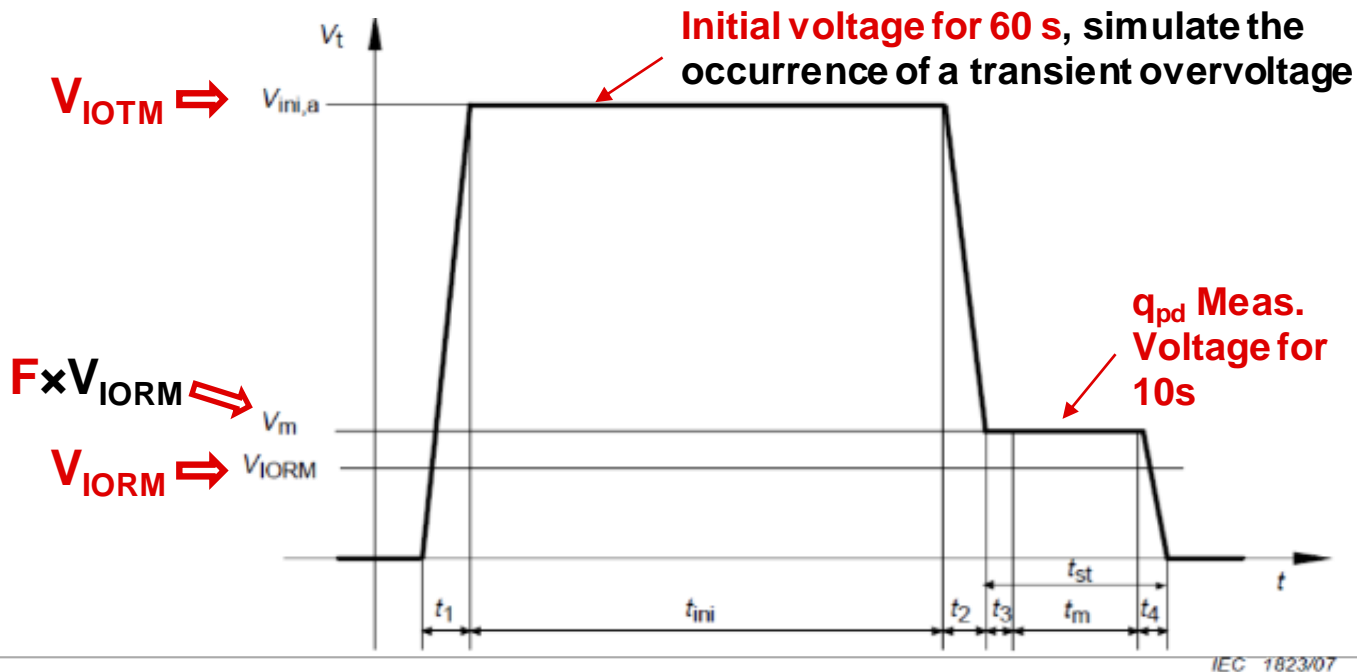

Term	Meanings
$C_a$	Device under test, modeled as a capacitor
$C_k$	Bypassing capacitor
$Z_m$	Measuring circuit (impedance, surge limit, others)
PD	Partial discharge measuring instrument

IEC 1832/07

# $q_{pd}$ test: method a), type test

- ❑ Sample tested – Must Be Tested From Random Production Lot Once / Quarter
- ❑ No failures, Perform if new package material, lead frame, package construction.

## Subgroup 1:

$F = 1.6$  for reinforced  
iso and 1.2 for basic

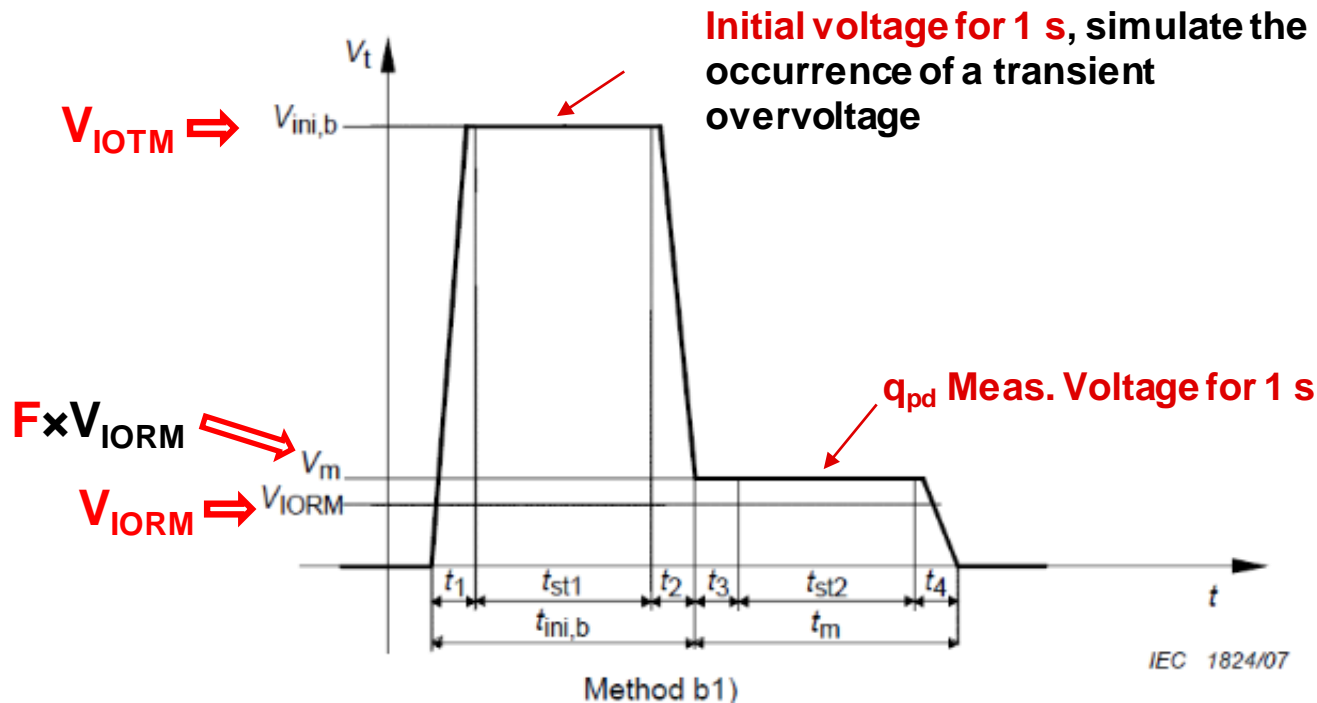

## Subgroup 2:

$F = 1.2$  for basic and  
reinforced

Requirement:  $\leq 5$  pC

# $q_{pd}$ test: method b1), routine test

☐ Routine tested

$$F = 1.875 \text{ reinforced iso} \\ = F_1 * F_2 * F_3$$

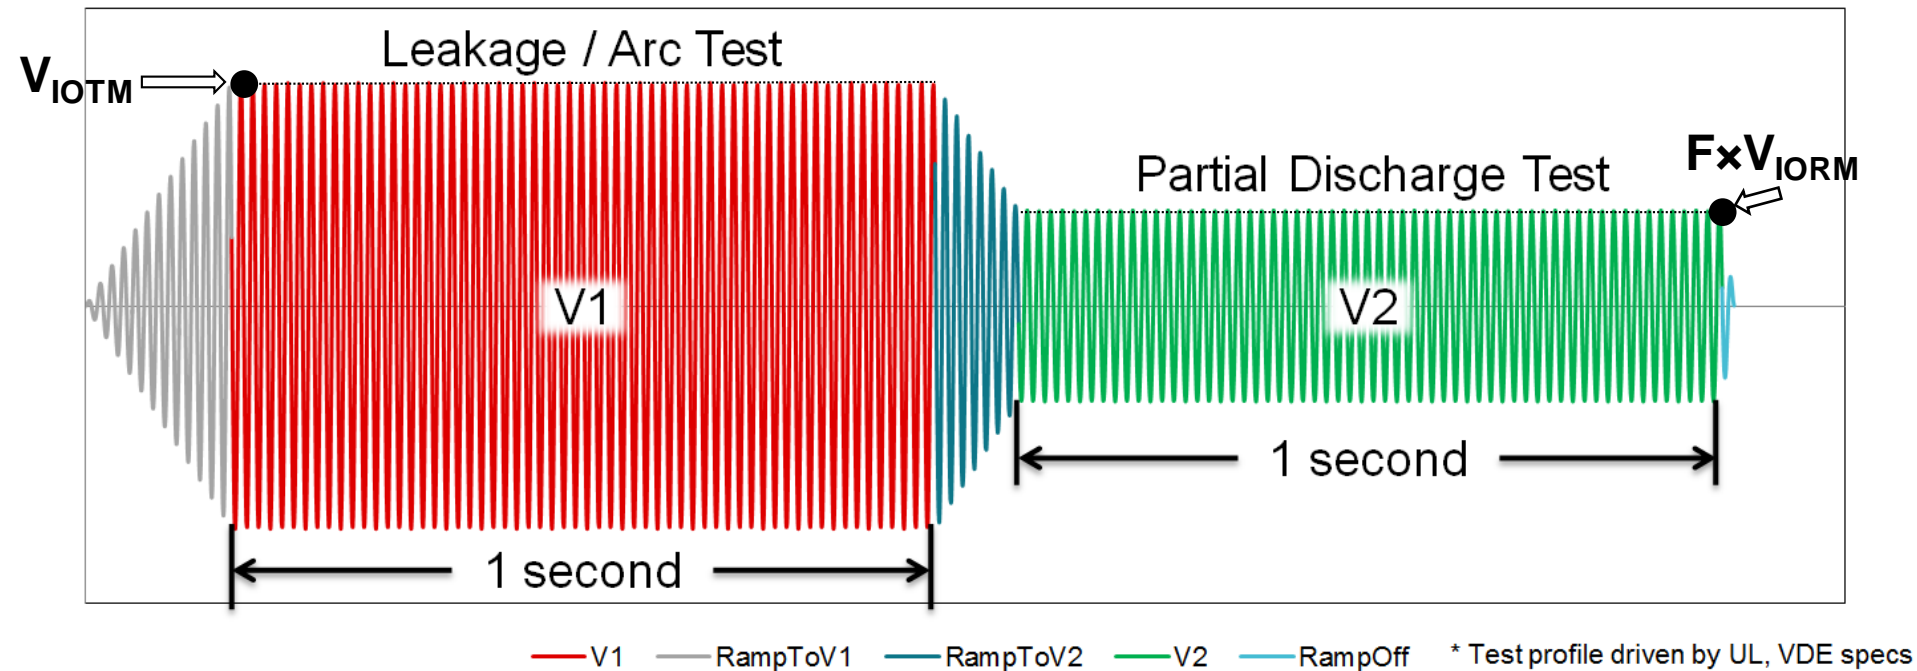

$$F = 1.5 \text{ for basic iso} \\ = F_1 * F_2$$

Requirement:  $<5 \text{ pC}$

IEC 60664-1:

- $F_1$ : 1.2, environment factor (Temp.);
- $F_2$ : 1.25, PD hysteresis factor;
- $F_3$ : 1.25, Safety factor for reinforced isolation
- $F_4$ : 1.1, Deviation factor from normal voltage

# $q_{pd}$ test: method b1), an example waveform

# TDDDB: Time Dependent Dielectric Breakdown

- ❑ Aging affect observed in isolators using  $\text{SiO}_2$  or silica based materials to provide internal solid insulation
- ❑ Accelerated lifetime testing of the isolation barrier
  - ❑ Weibull statistics at each voltage
  - ❑ Multiple voltages, fit to model

$$L = c \cdot e^{-k \cdot V^{-n}}$$

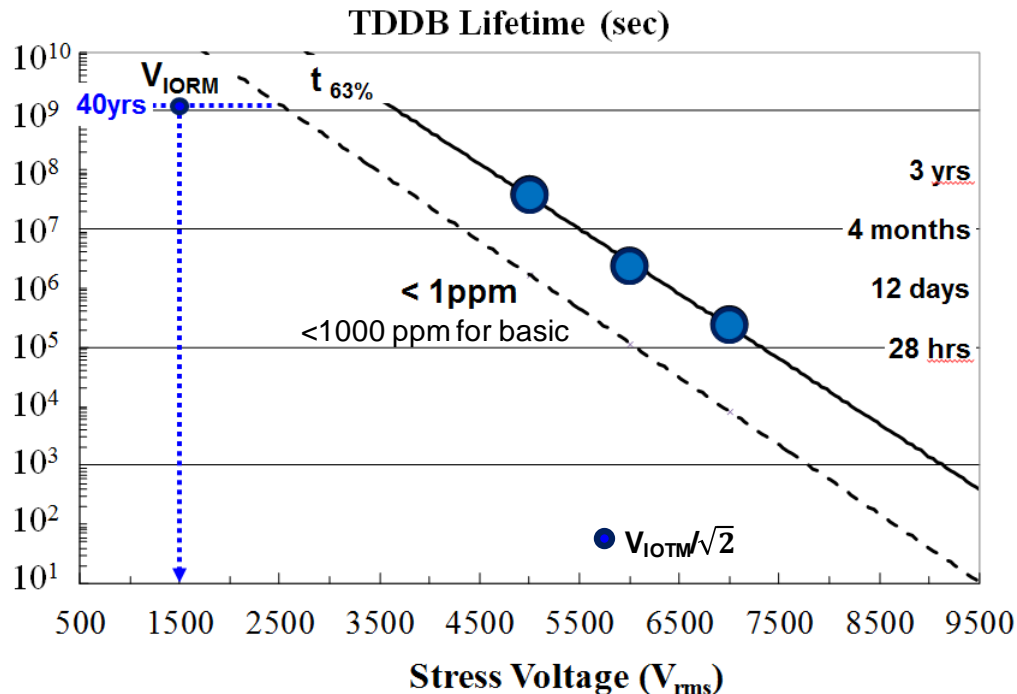

$L$  – time to failure;

<2 M $\Omega$  at 500 V<sub>DC</sub> for basic

<4 M $\Omega$  at 500 V<sub>DC</sub> for reinforced

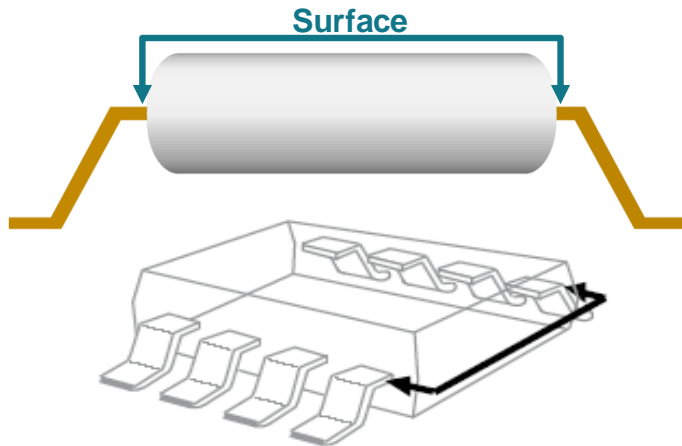

$V$  is test voltage

$c, n, k$  are constant

# CPG and CLR

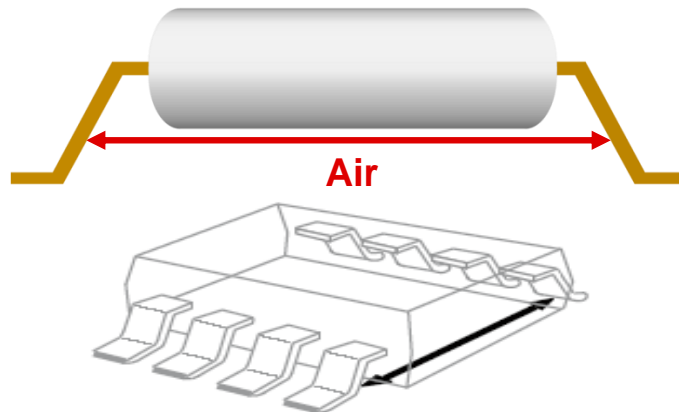

## Creepage distance (CPG)

Shortest distance **along the surface** of a solid insulating material between two conductive parts

- **Pollution, humidity, condensation** matters most

## Clearance distance (CLR)

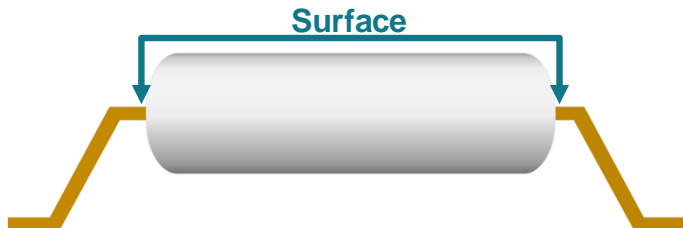

Shortest distance **in air** between two conductive parts

- **Air pressure (altitude), temperature** matters most

# CPG and CLR

## Creepage distance (CPG)

- ❑ Dimensioned for a given **1) RMS working voltage, 2) pollution degree, 3) material group,**
- ❑ No flashover or breakdown of insulation will occur

## Clearance distance (CLR)

- ❑ Dimensioned for the likelihood of breakdown due to **1) temporary voltage, 2) transient voltages, 3) recurring peak voltages**
- ❑ Multiplication factor above 2000 m
  - ❑  $\times 1.48$  @ 5000 m

# Material group and CTI

- ❑ **Material groups** depend on the comparative tracking index (CTI)
- ❑ **CTI** – the maximum voltage  $V_{AC}$  (in Volts) at which an insulating material withstands 50 drops ( per 30 s) of contaminated water (0.1% ammonium chloride)
  - ❑ No tracking ( $<0.5$  A) (formation of conductive paths)
  - ❑ An accelerated simulation of conditions of surface in equipment using insulating material

Material groups	CTI range
Material group I	$CTI \geq 600$
Material group II	$400 \leq CTI < 600$
Material group IIIa	$175 \leq CTI < 400$
Material group IIIb	$100 \leq CTI < 175$

If not specified

\* Material group is verified by evaluation of the test data according to IEC 60112

# Pollution Degree

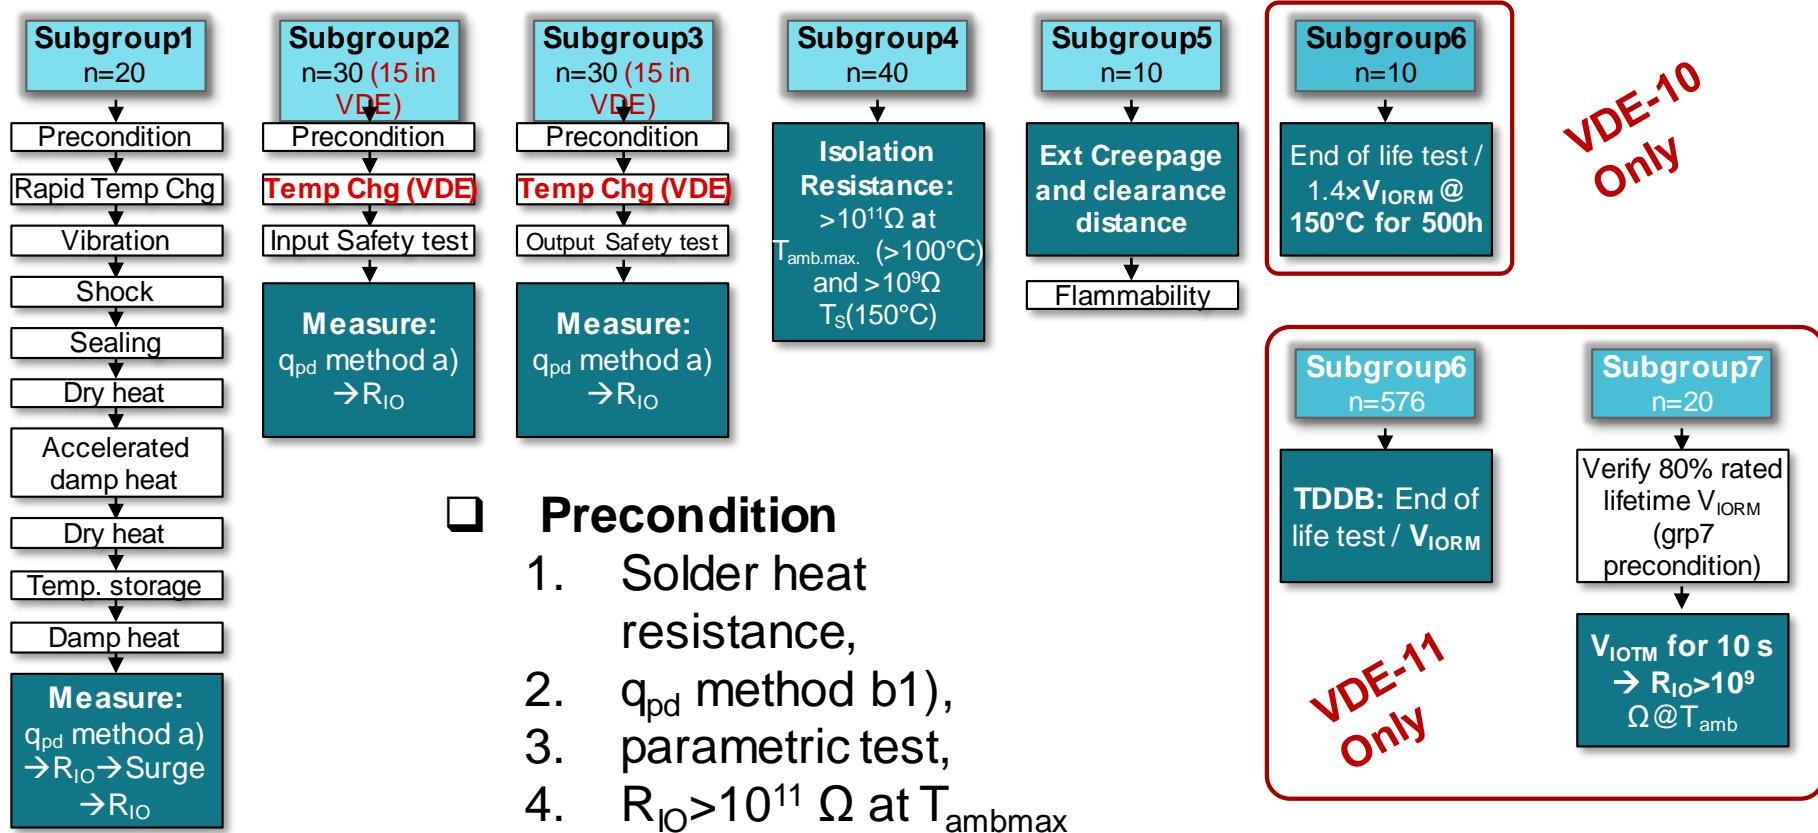

Classes	Descriptions	Examples
Pollution degree 1	<ul style="list-style-type: none"><li>• There is no pollution or only dry, non-conductive pollution</li></ul>	<ul style="list-style-type: none"><li>• <b>Sealed</b> components, equipment or subassemblies</li></ul>
Pollution degree 2	<ul style="list-style-type: none"><li>• Temporarily become conductive due to occasional condensation</li></ul>	<ul style="list-style-type: none"><li>• IEC 60950/62368</li><li>• Lab, office</li></ul>
Pollution degree 3	<ul style="list-style-type: none"><li>• Subject to conductive pollution</li><li>• Non-conductive pollution that could become conductive <b>due to expected condensation</b></li></ul>	<ul style="list-style-type: none"><li>• Industrial and farming</li></ul>
Pollution degree 4	<ul style="list-style-type: none"><li>• Continuous conductivity occurs due to conductive dust, rain or other wet conditions</li></ul>	<ul style="list-style-type: none"><li>• Outdoor applications</li></ul>

# Impulse withstand voltage or overvoltage category

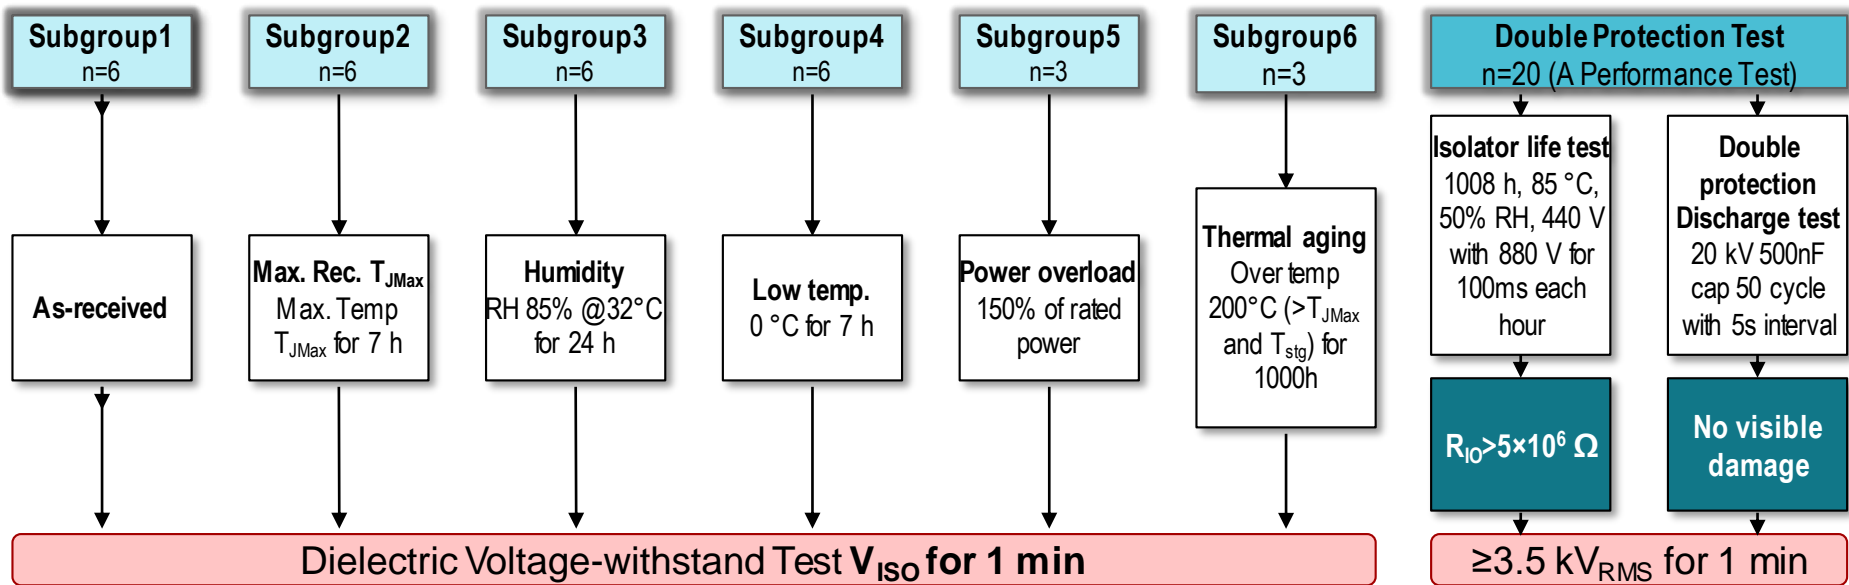

- ❑ **A probabilistic implication** used for equipment energized directly from low voltage mains
- ❑ Over voltage category  $\longleftrightarrow$  synonymous  $\rightarrow$  Impulse withstand category

Categories	Descriptions	Examples
CAT. 4	<ul style="list-style-type: none"><li>• Original of installation</li></ul>	<ul style="list-style-type: none"><li>• Electricity meters</li><li>• Utility transformers</li></ul>
CAT. 3	<ul style="list-style-type: none"><li>• Fixed installation where reliability and availability is subject to special requirements</li></ul>	<ul style="list-style-type: none"><li>• Utility panel</li><li>• Distribution board</li></ul>
CAT. 2	<ul style="list-style-type: none"><li>• Energy consuming equipment supplied from fixed installation</li></ul>	<ul style="list-style-type: none"><li>• Outlets</li><li>• 10m away from III</li></ul>
CAT. 1	<ul style="list-style-type: none"><li>• Equipment for connection to circuit in which measures are taken to limit transient voltage to a low level</li></ul>	<ul style="list-style-type: none"><li>• Thermostat,</li><li>• Office printer</li></ul>

# IEC60747-5-5 and VDE 0884-10 and -11 type tests

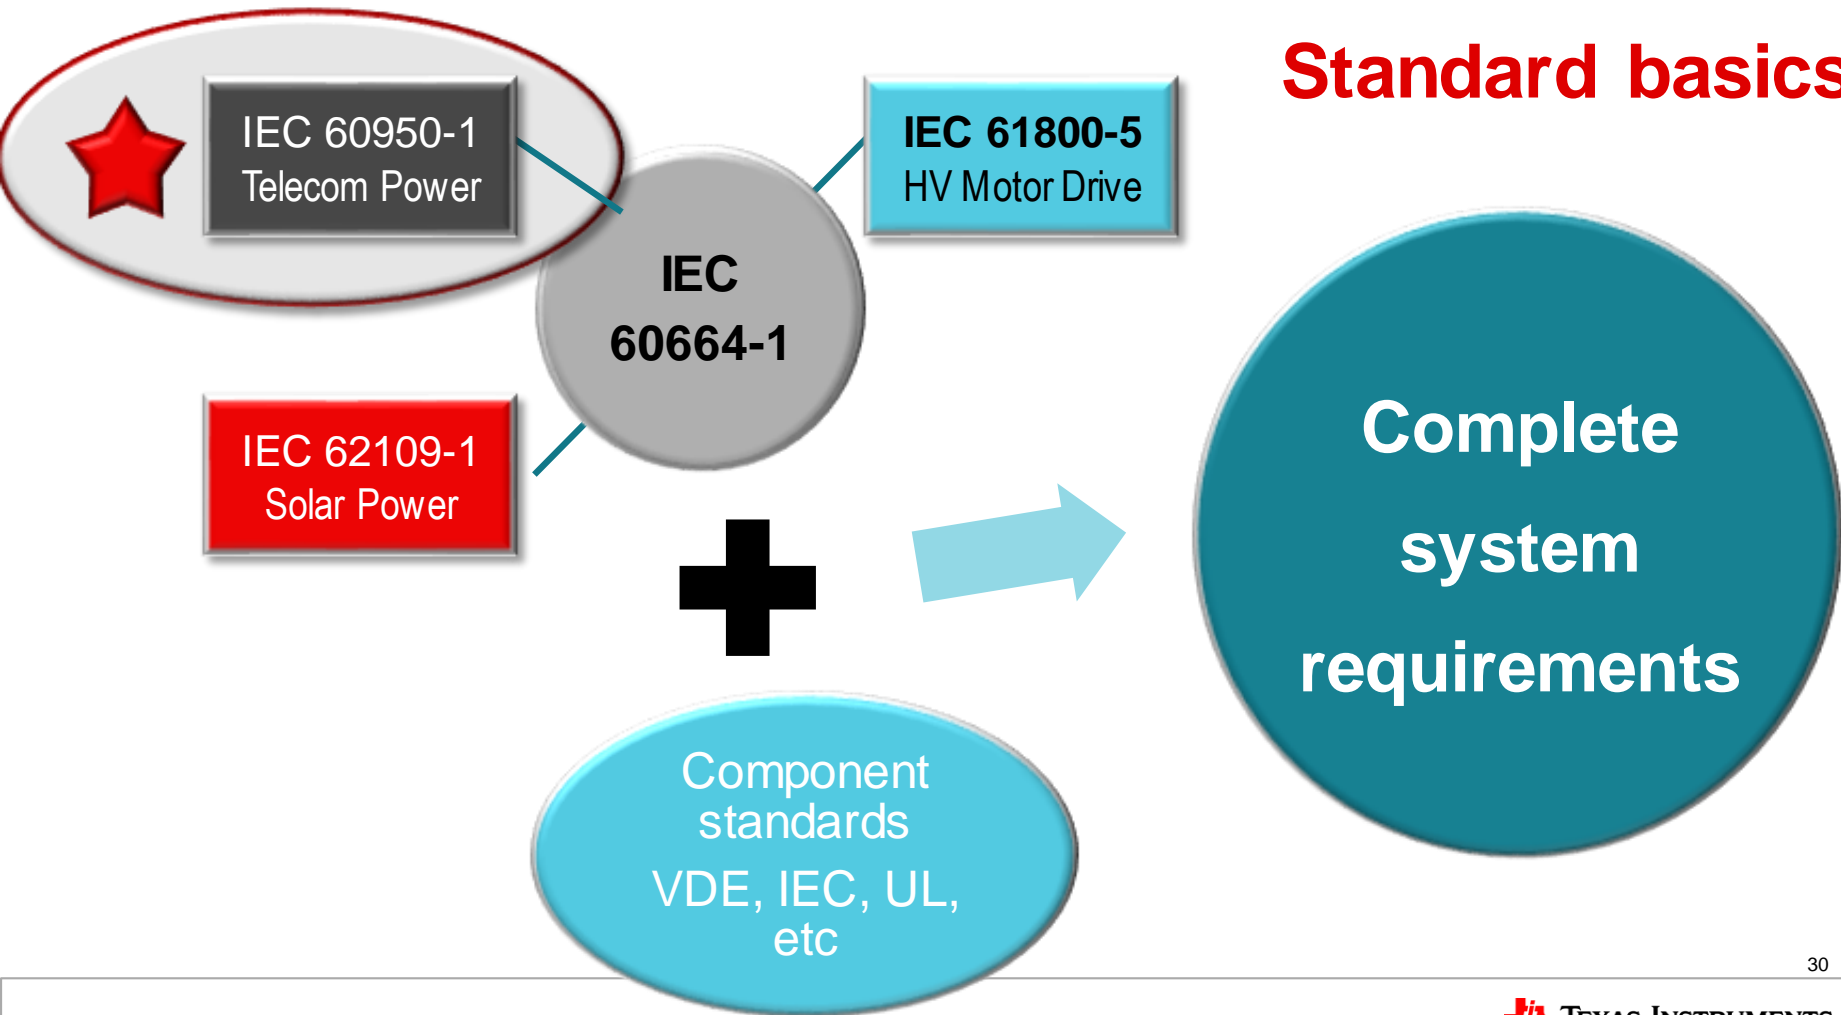

# UL 1577 type tests

# Device standards comparison (UL, IEC, VDE)

Reinforced ISO		UL 1577	IEC60747-5-5	VDE 0884-10	VDE 0884-11 (new)
Type		Opto-couplers or digital isolator	Opto-couplers	Magnetic and capacitive coupler	
Production Test	$V_{ISO}$	$1.2 \times V_{ISO}$ for 1 s	$1.0 \times$ or $1.2 \times V_{ISO}$ for 1 s or 2 s	Not specified	
	$q_{pd}$	Not specified	$1.875 \times V_{IORM}$ for 1 s	$1.875 \times V_{IORM}$ for 1 s	
$V_{IOWM}$		Not specified	Based on $q_{pd}$ test <b>No TDDB</b>	<b>No TDDB</b> submission required	<b>TDDB</b> ( $T_A$ & $T_{JMAX}$ , 3lots, 3 data points differ by 2 orders of magnitude)
Min Rate Lifetime @ $V_{IOWM}$		Not specified	Not specified	No specified	<b>37.5 years w 20% margin</b>
Life Verification		1008 h, 85°C $T_A$ , RH ≤50%, 440 Vac (w/ 0.1s 880Vac per h)	No specified	500h at $1.4 \times V_{IORM}$ at 150 °C	80% rated lifetime + $V_{IOTM}$ for 10 s + $R_{IO}$
Surge		Not specified	$V_{IOSM}$ , min. 10kV	$1.6 \times V_{IORM}$ , min. 10 kV	

# Standard basics

# What is IEC 60664-1 about?

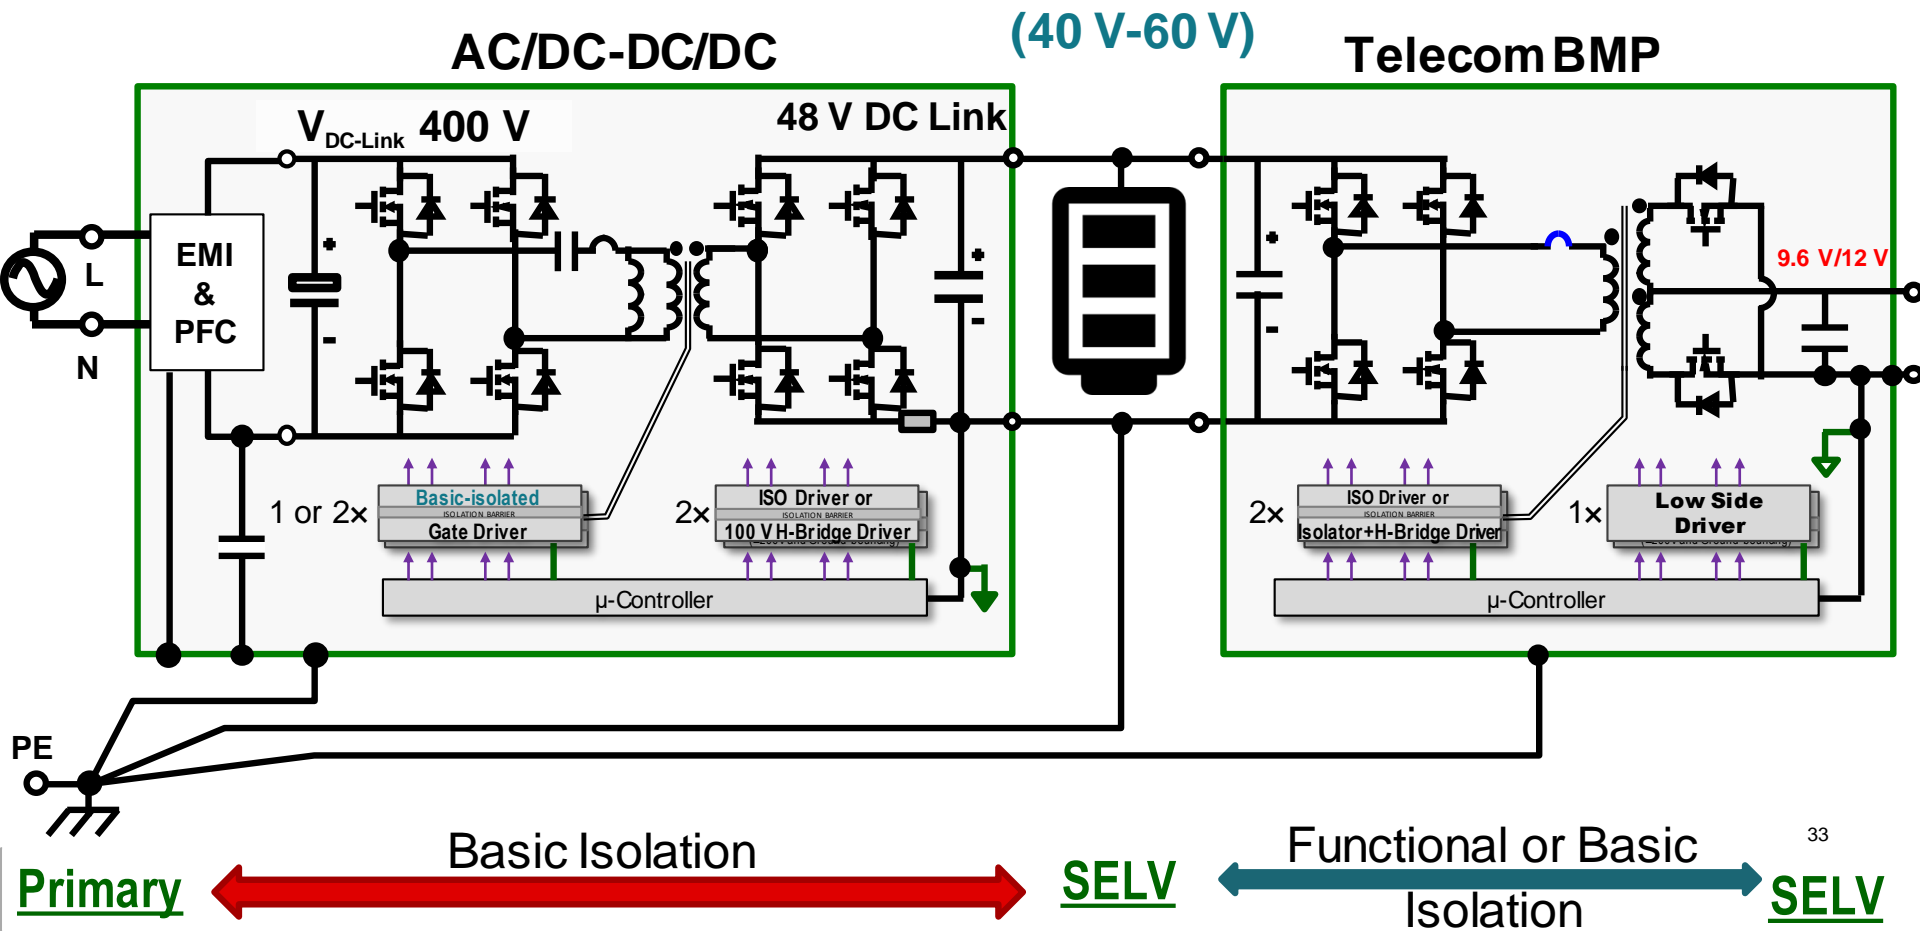

- ☐ **Insulation coordination for equipment within low-voltage systems**
  - Up to 1000 V<sub>a.c</sub> (<30 kHz) or
  - 1500 V<sub>d.c</sub>
- 1. Clearance, creepage distance
- 2. Electric strength testing
- ☐ **Guidance of insulation requirements for equipment**

Foundation of insulation basics

# Highlights from IEC 60664-1

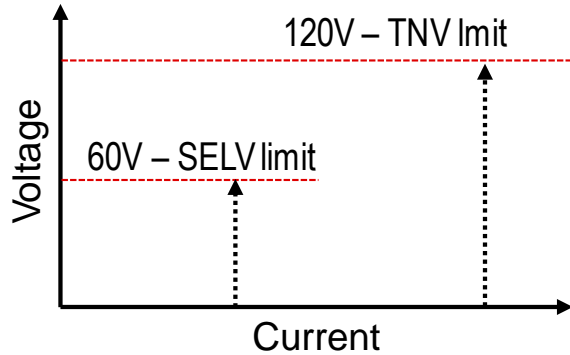

- ❑ Table F.1 – **Rated impulse voltage** for equipment powered directly by low voltage mains
- ❑ Table F.2 – Dimensioning **CLR** to withstand transient voltage
  - Basic insulation follows Table F.2 directly
  - Reinforced insulation follows Table F.2 but one step higher →
    - 330 V, 500 V, 800 V, 1 500 V, 2 500 V, 4 000 V, 6 000 V, 8 000 V, 12 000 V.
- ❑ Table F.4 – Dimensioning **CPG** to avoid failure due to tracking
- ❑ Table A.2 – Altitude **correction factors** above 2000 m for CLR
- ❑ **Electric strength test**
  - ❑ Impulse withstand voltage, or
  - ❑ Partial discharge based on working voltage

# Telecom AC-DC with 36 V-60 V output

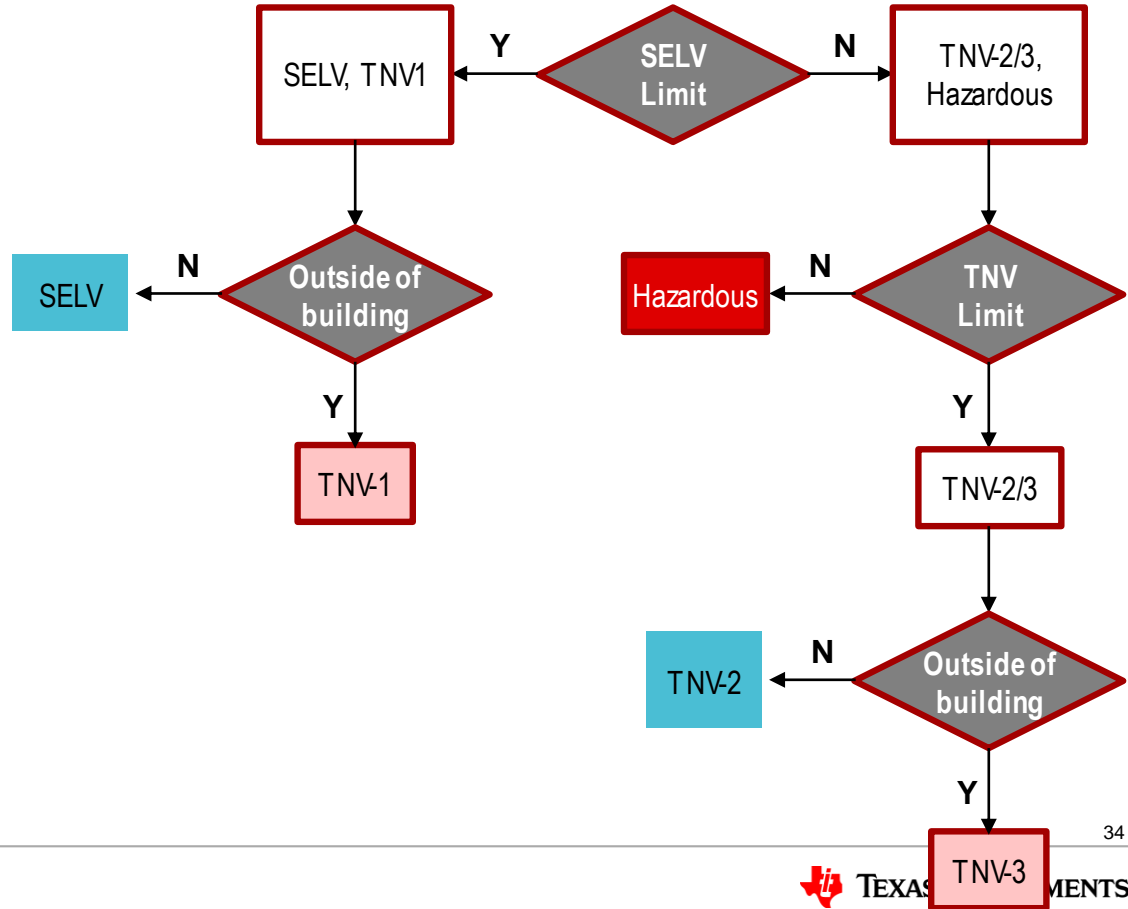

# What is SELV and TNV?

Normal operating voltage limit

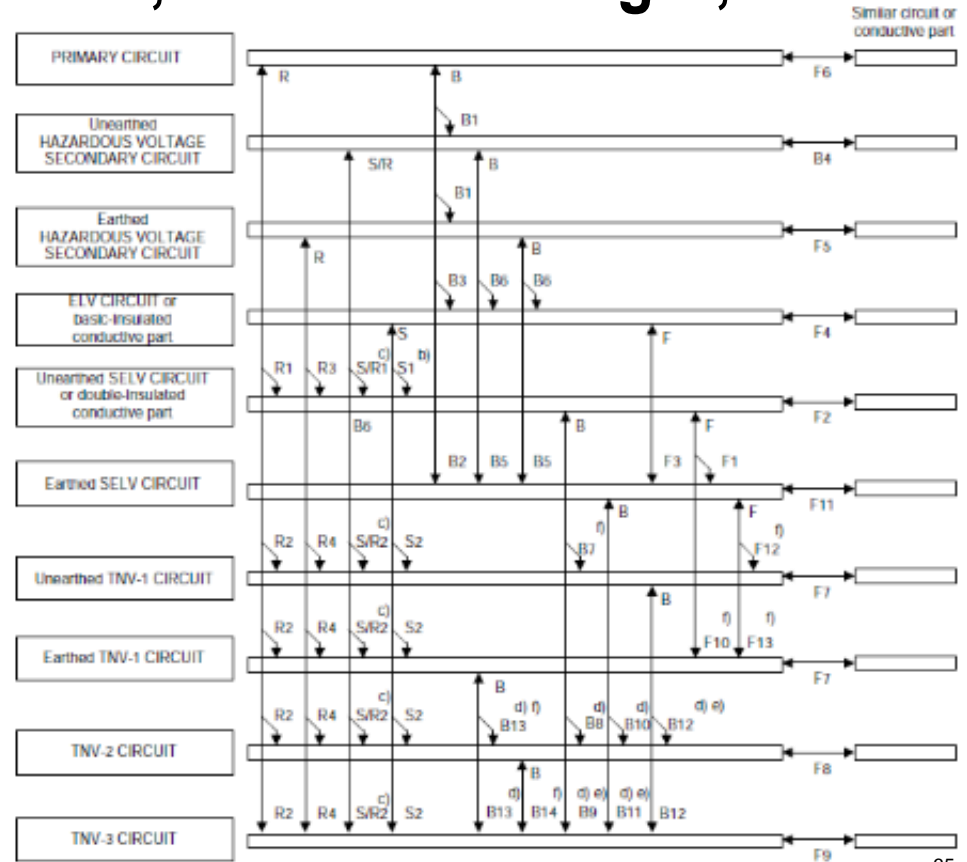

Or a combination of a.c. and d.c.

$$\frac{V_{a.c.}}{71\text{ V}} + \frac{V_{d.c.}}{120\text{ V}} \leq 1$$

# Insulation grades: CLR, CPG, electrical strength, etc.

Grd	Parts being separated		Example
<b>F</b>	SELV	SELV	<60 V brick module
	SELV	TNV-1	
	SELV	Reinforced part	48V DC - DC
<b>B</b>	SELV	Primary, TNV -2/3	<120 V brick module
	SELV (E)	Hazardous	400 V-48 V
	TNV-2	TNV-1/3	<120 V to <120 V
<b>R</b>	Primary	SELV (U)	AC to DC 12 V or 48 V
	Primary	TNV-x	AC to DC <120 V
	Hazardous	SELV (U), TNV-x	400 V-48 V

# Mains transient voltage: clearance distance

## ❑ Transient voltage from **AC mains**

AC MAINS SUPPLY voltage <sup>a</sup> (line to neutral voltage) V r.m.s.	MAINS TRANSIENT VOLTAGE <sup>b</sup>			
	V peak			
	Overtoltage Category			
	I	II	III	IV
up to and including 50	330	500	800	1 500
over 50	500	800	1 500	2 500
over 100 Including 120/208 V, 120/240 V	800	1 500	2 500	4 000
over 150 Including 230/400 V, 277/480 V	1 500	2 500	4 000	6 000
over 300 Including 400/690 V	2 500	4 000	6 000	8 000

\* IEC 60950-1 Ed2, Table 2J – AC mains transient voltage

- ❑ IEC 62368-1: 500 V<sub>PK</sub> for DC power distribution system **earthed at a single point**, or 350 V<sub>PK</sub> earthed at the source (5.4.2.3.2.3)

# Minimum clearances: primary circuits

- In primary circuits and between primary to secondary (mm), 2000m

Peak working voltage (V <sub>PK</sub> )	Mains transient					
	1500V			2500V		
	F	B	R	F	B	R
71 V	0.4	1.0	2.0	1.0	2.0 (1.5)	4.0 (3.0)
210 V	0.5	(0.5)	(1.0)	1.4		
420 V	1.5	2.0 (0.5)	4.0 (1.0)	1.5		

Value in parentheses applies based on IEC 62368-1

Table 2K, IEC 60950-1 Ed2 Amd1,

Altitude: 2000m. **For 5000m, multiplication factor is 1.48**

# Minimum clearances: secondary circuits

- Clearance in **secondary circuits** (mm), 2000m

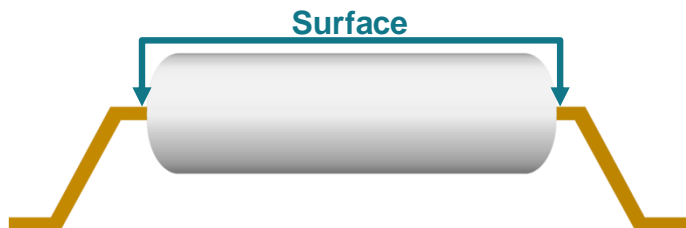

Peak working voltage (V <sub>PK</sub> )	Mains transient					
	1500 V			2500 V		
	F	B	R	F	B	R
71 V						
140 V	0.5	1.0	2.0	1.5	2.0	4.0
210 V						

Table 2M, IEC 60950-1 Ed2

Altitude: 2000m. **For 5000m, multiplication factor is 1.48**

# Creepage distance

## Creepage distance (CPG)

- ☐ Dimensioned for a giving **1) RMS working voltage, 2) pollution degree, 3) material group,**
- ☐ No flashover or breakdown of insulation will occur

\*Pollution degree 2

Isolation grade	RMS working voltage (V)	Material group		
		I	II	III
Functional or basic isolation	80	0.67	0.9 (0.95)	1.3
	125	0.75	1.05	1.5
	400	2.0	2.8	4.0
Reinforced isolation	80	2 × distance above		
	125			
	400			

# DTI & electric strength

- ❑ **No minimum DTI** is required semiconductor device which is completely filled with insulation compound (semiconductor device), provided passing

1) Electric strength **TYPE** test

**AND**

2) Electric strength **ROUTINE** test (*insulation grade matters*)

**A. Basic and reinforced isolation (5.2.2)**

- **Peak working voltage** *Table 2B*; OR
- **Required withstand voltage** *Table 5C* (CAT III shall use Table 5C)

**B. Functional isolation (5.3.4)**

- **Same with above** if CPG&CLR is **NOT** met  
(< 707 V required withstand voltage when working voltage < 60V<sub>DC</sub>)

**OR**

- NOT required if CPG&CLR is met

# Electric strength test B: based on required withstand voltage

IEC 60950-1 ed. 2.0, Table 5C, Amd2,

Required withstand voltage kV <sub>PK</sub>	Test voltage for electric strength based on required withstand voltage	
	Functional or Basic (kV <sub>PK</sub> or d.c.)	Reinforced insulation (kV <sub>PK</sub> or d.c.)
0.8	0.9 (0.8)	1.5
1.5	1.5	2.5
2.5	2.5	4.0
4.0	4.0	6.0

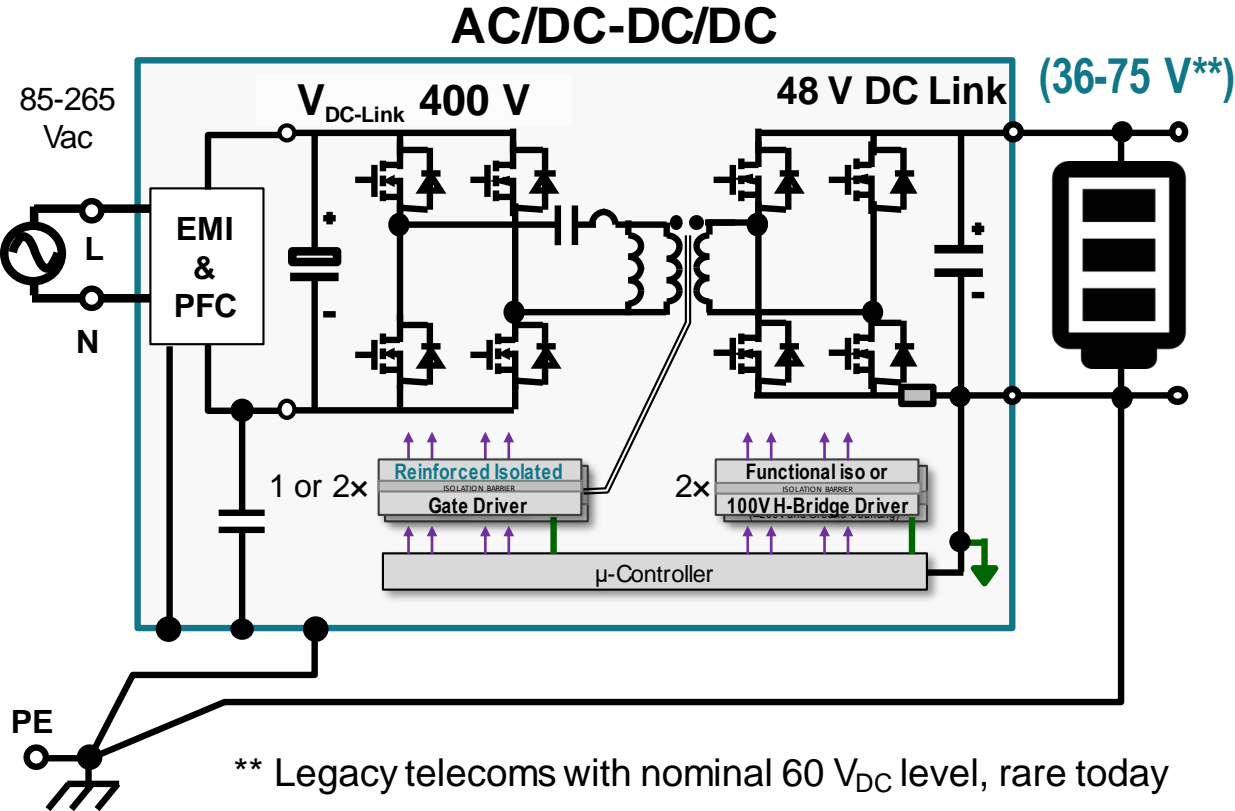

**CAT III** shall use Table 5C

Value in parentheses applies based on IEC 62368-1

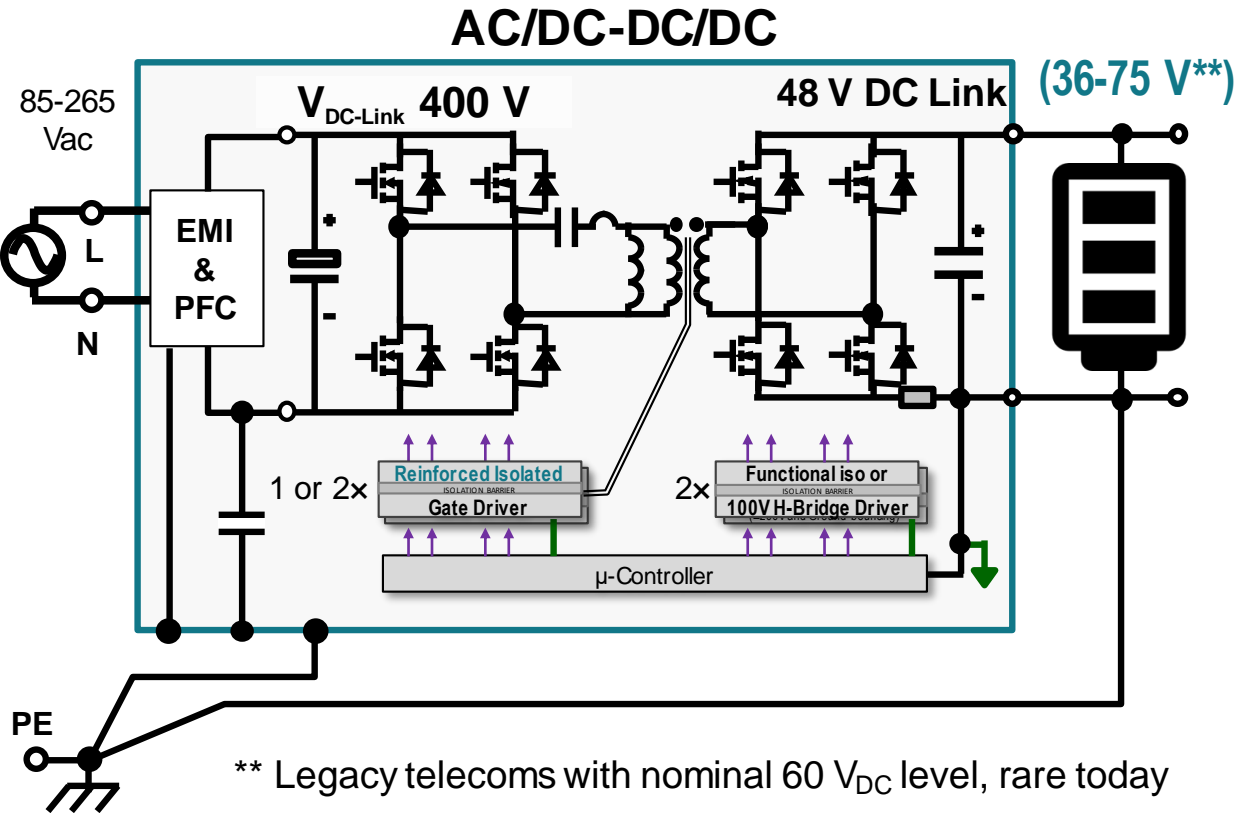

- **Routine test** allows test duration **reduced to 1s**, and test voltage (for Table 5C) **reduced by 10%**

# Case study 1b: isolated AC/DC (TNV-x)

Grd	Parts being separated	
F	SELV	SELV
	SELV	TNV-1
	SELV	Reinforced part
B	SELV	Primary, TNV -2/3
	SELV (E)	Hazardous
	TNV-2	TNV-1/3
R	Primary	SELV (U)
	Primary	TNV-x
	Hazardous	SELV (U), TNV-x

# Case study 1b: isolated AC/DC (TNV-x)

Item	Minimum required
AC mains transient	2500 V CAT II
Clearance	4 mm
Clearance @5000m	6 mm
Creepage (MG I)	4 mm
Creepage (MG III)	8mm
Electric strength A	3.0 kV <sub>RMS</sub> <i>V<sub>ISO</sub></i>
Electric strength B (Routine test)	4.0 kV <sub>PK</sub> <i>V<sub>IOTM</sub></i>
