# *TPS7H3014-SP Total Ionizing Dose (TID)*

**ABSTRACT**

This report discusses the total ionizing dose (TID) parametric results for TPS7H3014-SP, Texas Instruments, 3V to 14V, four-channel radiation-hardness-assured power-supply sequencer. The study was done to determine the TID effects under high dose rate (HDR) up to 100krad(Si). The results show that all samples passed within the specified limits up to 100krad(Si).

## 1 Device Information

### 1.1 Product Description

The TPS7H3014-SP is an integrated, 3V to 14V, four-channel radiation-hardness-assured power-supply sequencer. Channel count can be expanded by connecting multiple devices in a daisy-chain configuration. The device provides sequence up and down control signals for integrated circuits (IC) with active high (*on*) inputs. In addition SEQ_DONE and PWRGD flags are provided to monitor the sequence and power status of the monitored power tree.

An accurate 599mV ±1% threshold voltage and a 24µA ±3% hysteresis current provide programmable rise and fall monitoring voltages. The rise and fall delay time is globally programmed through a single resistor. A time-to-regulation timer is provided to track the rising voltage on SENSEx.

In addition to these features, a FAULT detection pin is incorporated to monitor internally generated faults and provide increased system level reliability for power sequencing space applications.

The TPS7H3014-SP is packaged in a 22-pin CFP (ceramic flat package) package. A standard microcircuit drawing (SMD) is available for the QML variant, 5962R2320101VXC.

# 2 Total Dose Test Setup

## 2.1 Test Overview

The TPS7H3014-SP was tested according to MIL-STD-883, Test Method 1019.9. For this testing, Condition A was used. The product was irradiated up to the target radiation level, and then put through full electrical parametric testing on the production Automated Test Equipment (ATE). All devices remained functional passing all parametric test limits.

## 2.2 Test Description and Facilities

The TPS7H3014-SP HDR exposure was performed on biased and unbiased devices in a Co-60 gamma cell at TI facility in Dallas, Texas. The unattenuated dose rate of this cell is 183.827rads(Si)/s (183.819 to 183.831rad(Si)/s). After exposure, the devices were packed in dry ice (per MIL-STD-883 Method 1019.9 section 3.10) and full post-radiation electrical evaluation using Texas Instruments ATE was conducted. ATE test limits are set per data sheet electrical limits based on qualification and characterization data. Post-radiation measurements were taken within 30 minutes of removing the devices from the dry ice container. The devices were allowed to reach room temperature prior to electrical post-radiation measurements.

## 2.3 Test Setup Details

The devices under HDR exposure were tested in two conditions (biased and unbiased) as described in the following sections.

### *2.3.1 Unbiased*

For the unbiased HDR conditions, the exposure was performed with all pins grounded.

### *2.3.2 Biased*

Figure 2-1 shows the diagram for HDR exposure with biased condition.

## 2.4 Test Configuration and Condition

HDR devices were stressed at 3 krad(Si), 10 krad(Si), 30 krad(Si), 50 krad(Si), and 100 krad(Si) for biased and unbiased conditions.

# 3 TID Characterization Test Results

## 3.1 TID Characterization Summary Results

The parametric data for the TPS7H3014-SP passes up to 100krad(Si) HDR TID irradiation. The drifts of the electrical parameters through HDR were within the data sheet limits.

Overall, the TPS7H3014-SP showed a strong degree of hardness to HDR TID irradiation up to 100krad(Si) for both biased and unbiased exposure conditions. The measurements taken post-irradiation for each sample set showed a marginal shift for most parameters at each dose level for both biased and unbiased. The parameters that did show a greater degree of change between pre- and post-irradiation were still within the electrical performance characteristics specified in the data sheet electrical parameters. See *TPS7H3014-SP Radiation-Hardeness-Assured, 14-V, 4-Channel Sequencer* data sheet for the data sheet electrical parameters and associated tests.

See Appendix A for HDR report up to 100krad(Si).

# 4 Applicable and Reference Documents

## 4.1 Applicable Documents

- Texas Instruments, *TPS7H3014-SP Radiation-Hardeness-Assured, 14-V, 4-Channel Sequencer*, data sheet.
- Texas Instruments, *TPS7H3014EVM-CVAL Evaluation Module User's Guide*, user's guide.

## 4.2 Reference Documents

Texas Instruments total ionizing dose radiation (total dose) test procedure follows the standards put forth in MIL-STD-883 TM 1019. The document can be found at the DLA website.
