

New Product Update

New hardware-level solution for end node synchronization for higher levels of automation within ADAS

Vikram Sharma

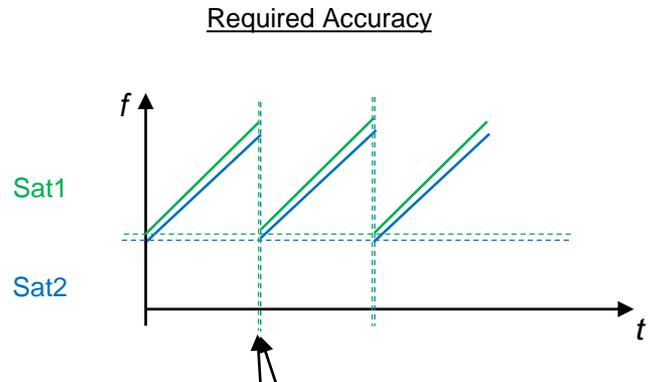

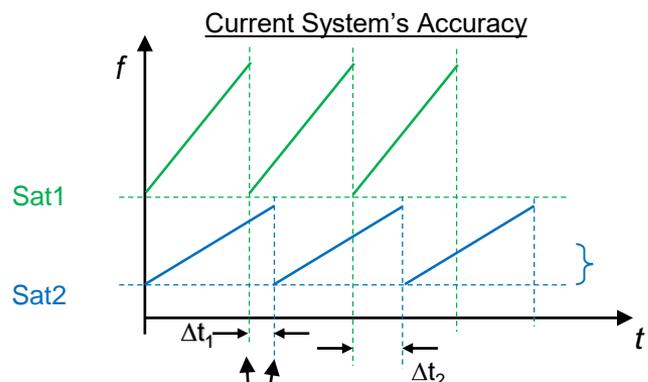

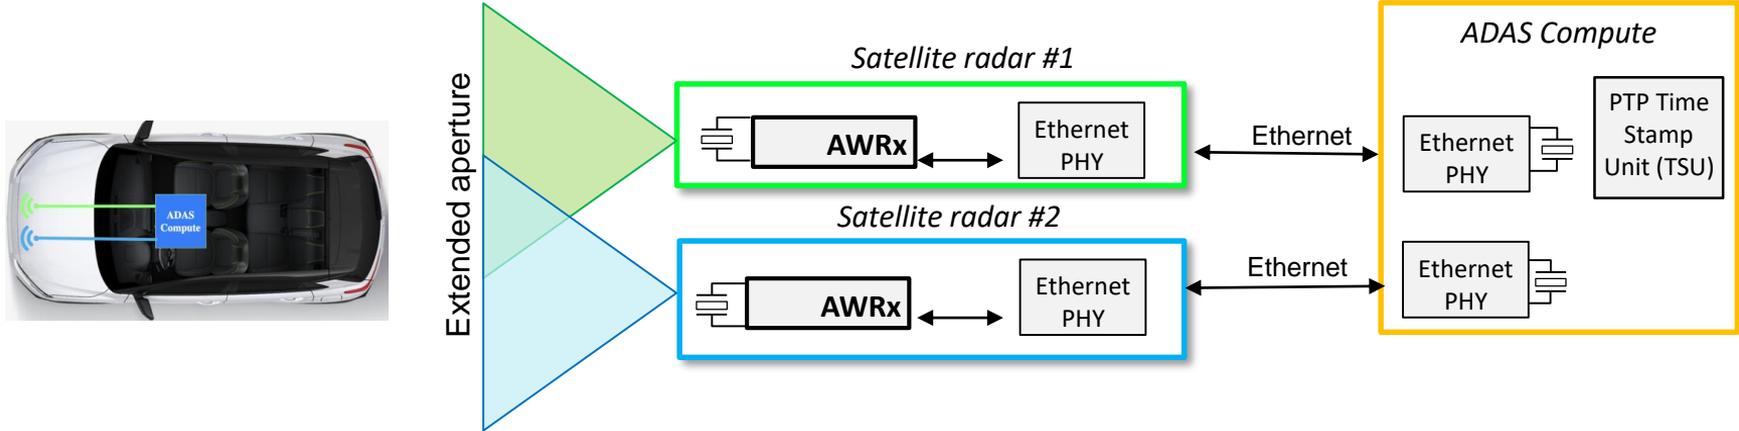

Marketing and Applications Manager,
Ethernet, Texas Instruments

Agenda

- Synchronization in Automotive:
 - Why?
 - Where?
- TI Ethernet PHYs – Precise synchronization
 - How?
 - 100Mbps Ethernet PHY: DP83TC817
 - 1000Mbps Ethernet PHY: Preview

Synchronization in Automotive: Why?

Distributed Coherent Radar

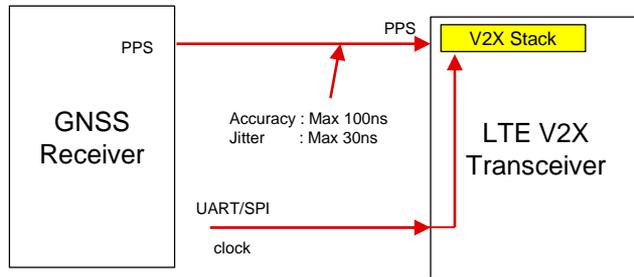

Frame_Triggers : "microseconds" apart and varying

Frame_Triggers : "nanoseconds" apart and locked

GPS Clock Distribution

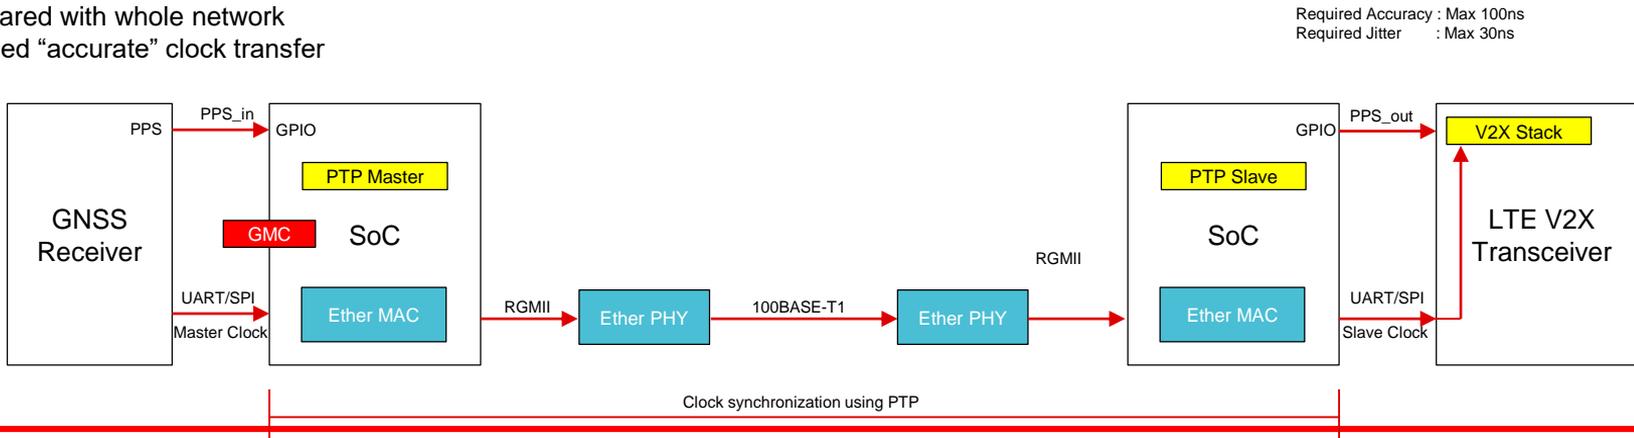

Current Architecture : Multiple GNSS Receivers

- One attached to every ECU looking for high accurate clock.
- Example: Dedicated GNSS receiver for V2X

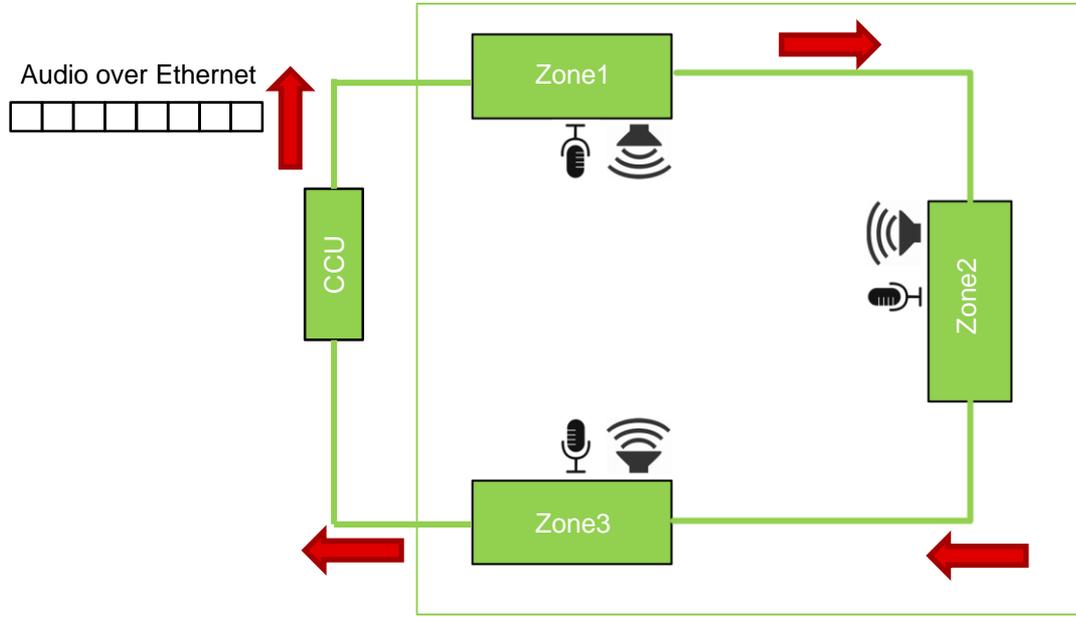

Optimized Architecture : Single GNSS Receiver

- Shared with whole network
- Need “accurate” clock transfer

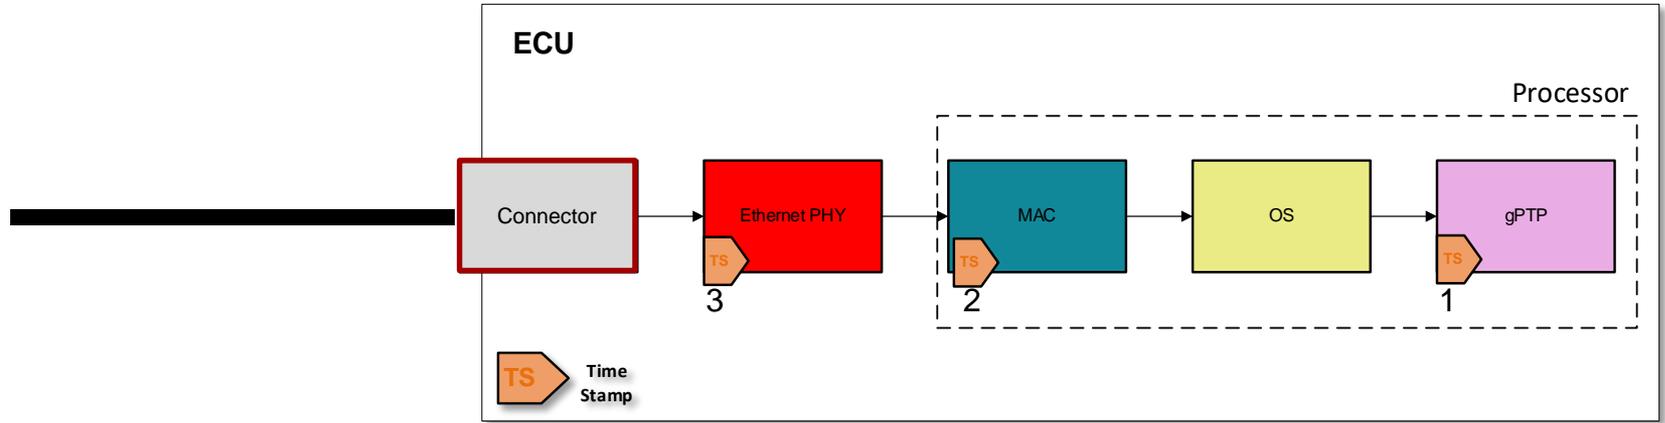

Audio Over Ethernet

- **High synchronization accuracy must for:**
 - High quality/synchronized audio
 - Accurate noise cancellation
 - Etherloop architecture: latency compensation

Synchronization in Automotive: Where?

Possible Time Stamping Locations

- Software-based time-stamping : Least accurate! High variations! : 100us - ms
- Hardware-based time-stamping @ MAC in SOC : More accurate! Medium variations! : 10us – 100us
- Hardware-based time-stamping @ PHY : Most accurate! Low variations! : ns

TI Ethernet PHYs – Precise synchronization

TI Ethernet PHY: Highly Accurate Wall-clock

IEEE802.1as PTP Reference Clock (Time-of-Day)

Seconds (32 bit)

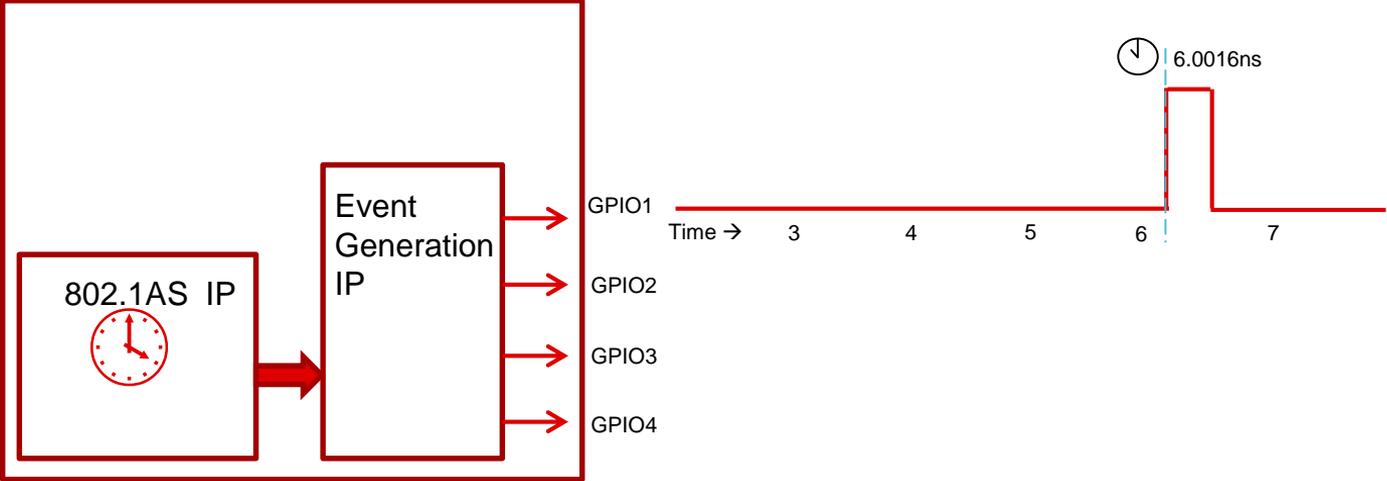

Nano Seconds (30bit)

Fraction Nanosecond (2^{-32}) (32 bit)

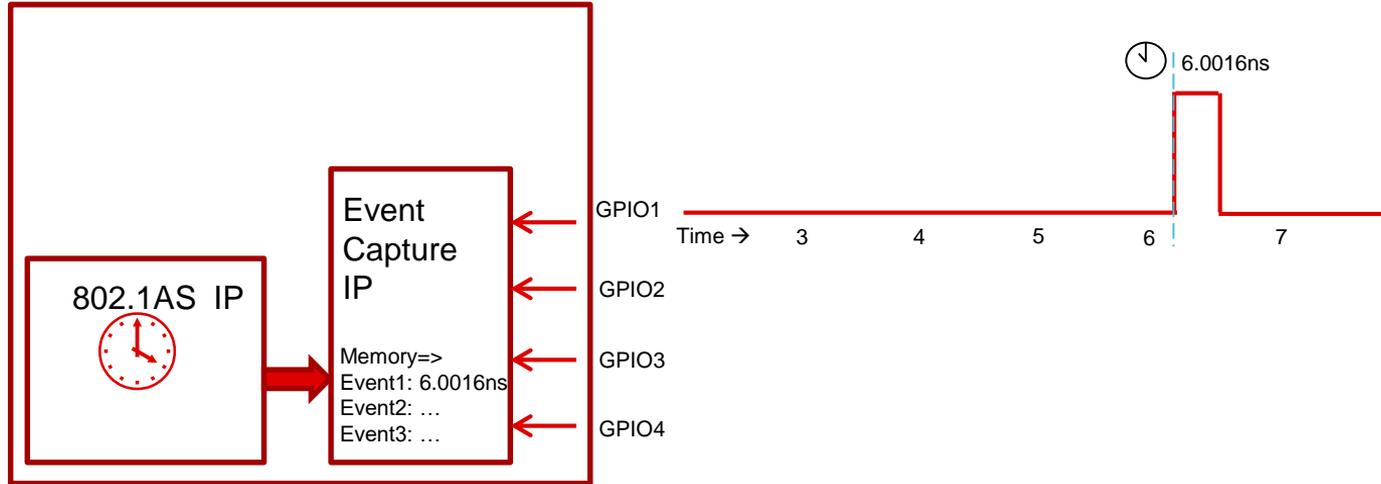

- **Enhanced Clock Counter Adjustments:**
 - Direct time set
 - Step adjustment
 - Temporary rate adjustment
 - Permanent rate adjustment

- **Reference Clock Selection Options:**
 - High-accuracy internal PLL
 - Recovered clock
 - External reference clock

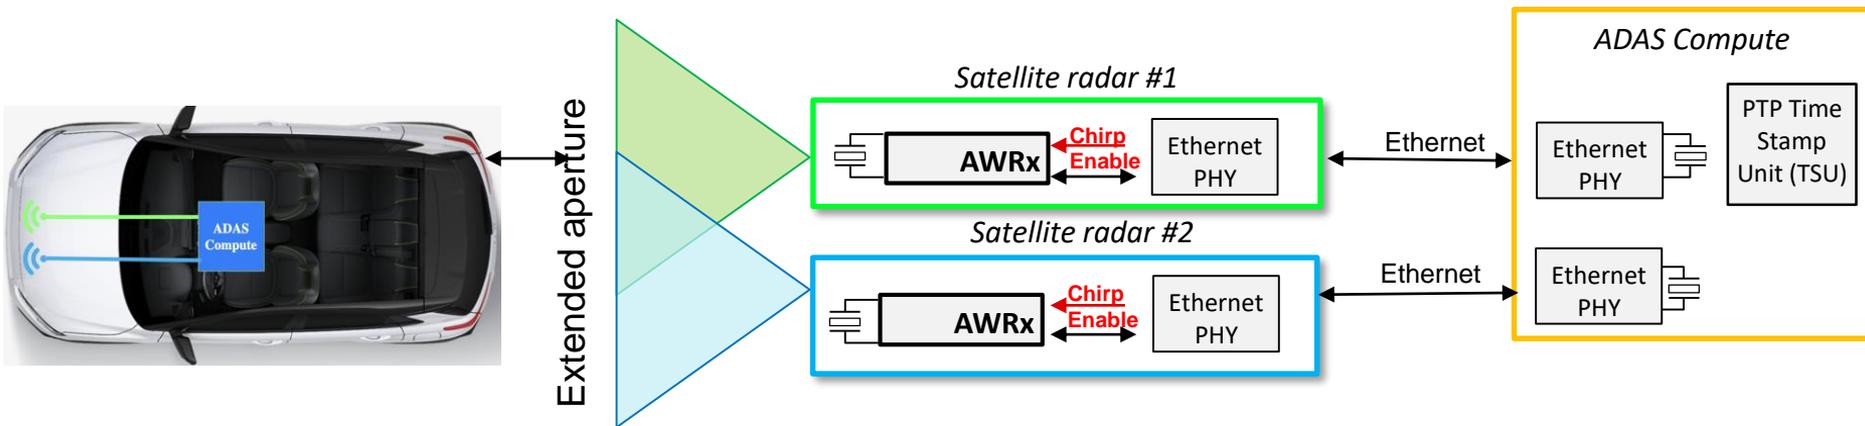

Integrated Event Generations : Nanosecond Accurate

Integrated Event Capture : Nanosecond Accurate

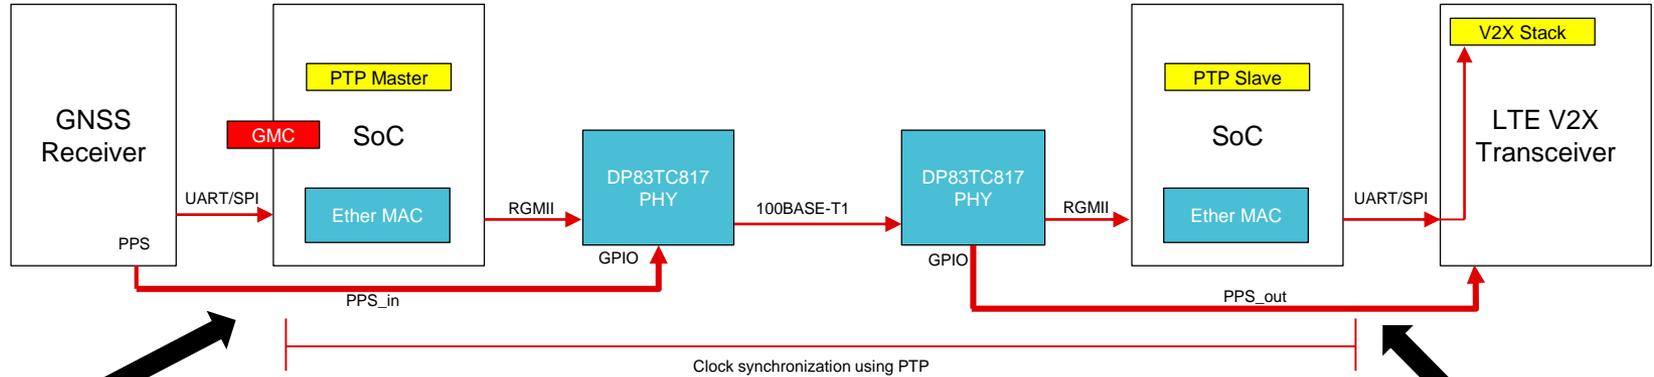

Distributed Coherent Radar – TI Advantage

TI PHYs generates synchronized “chirp enable” : “nanoseconds accuracy”

- ✓ Extends the object detection distance
- ✓ Increases object resolution
- ✓ Decreases hardware/software overhead on ADAS compute

GPS Clock Distribution – TI's Solution

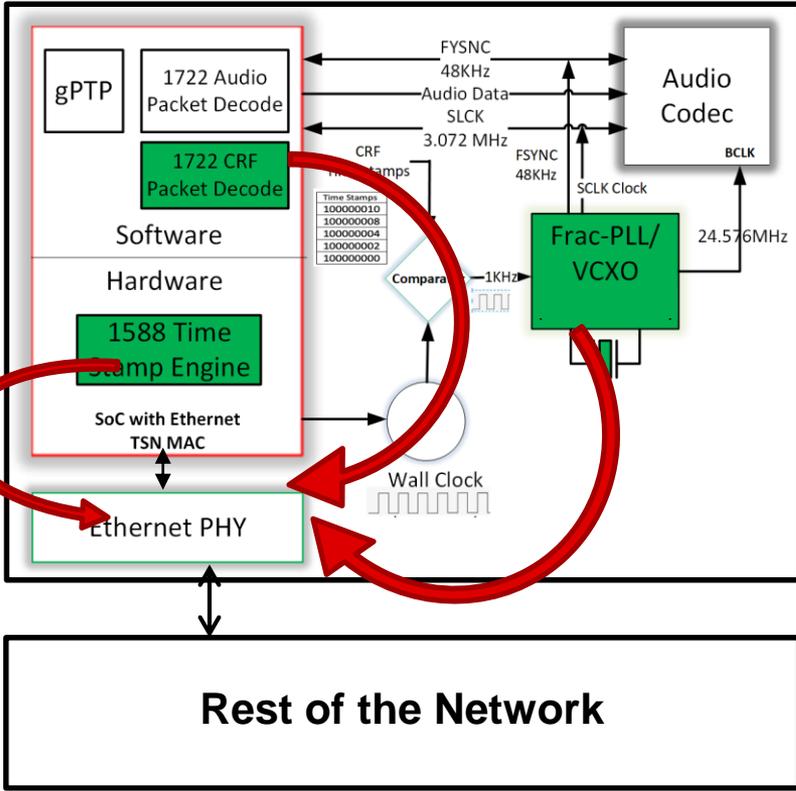

GPS clock input: direct to PHY

GPS clock output: direct from PHY

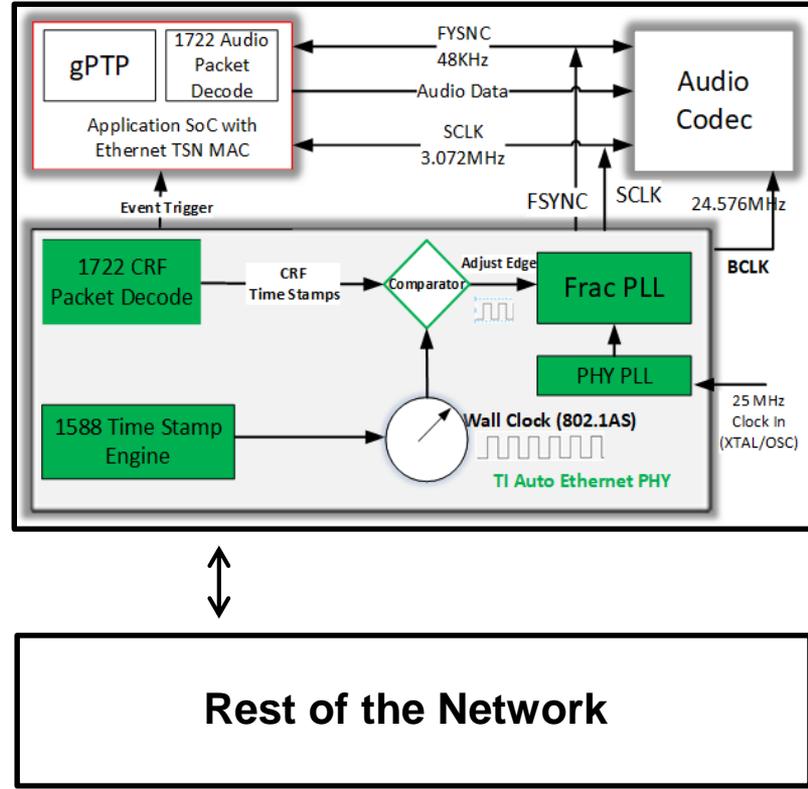

Accuracy : 10ns

Integrated Audio Clock Gen and Sync: AVB

Yesterday's Solution

TI's Solution

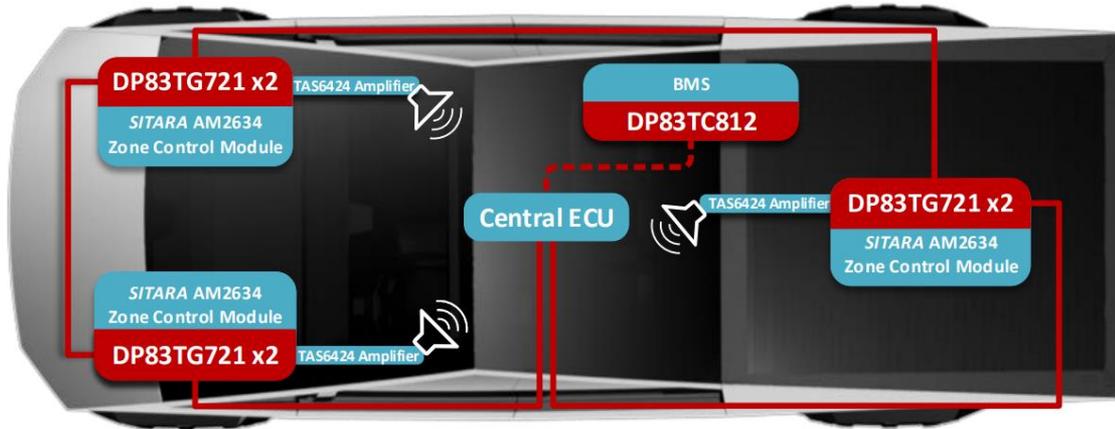

- ✓ \$2 BOM saving
- ✓ Simpler software
- ✓ Cheaper SoC

Etherloop with TI Ethernet PHYs

- 1000BASE-T1 EtherLoop proven on DP83TG721
- 100BASE-T1 EtherLoop possible on DP83TC818

Resources: 100Mbps PHY with Advanced Synchronization

Status: Sampling
