Business Roles

Program overview

When you join TI as an intern, new college graduate or experienced hire, you're joining a team of innovators that's been redefining what's possible for decades. Our innovations are at work all around you – in things you experience every day. We engineer and manufacture semiconductors that enable everything from connected cars to intelligent homes; from drones to smart phones. Our work is fascinating and challenging. But it's our people that make us great. Tiers are problem solvers, achievers and collaborators. We are committed to our work, to each other, to our communities, and to shaping the future of electronics. And we're devoted to continuous learning and development.

We are currently hiring for positions in the following areas:

Facilities

Experience various roles that support building and semiconductor wafer fab facilities. We design, install, and operate more than 150 different utility systems that include chemical, gas, electrical, water, cleanroom, HVAC, and controls, with a focus on safety and the environment. These infrastructure systems are designed to operate interruption-free in support of our 24/7/365 manufacturing operations where TI's world-changing technologies are created.

Finance, Accounting and Operations (ACCESS)

Our Finance, Accounting and Operations program, known as ACCESS, is the way into our finance and operations organization. For students studying accounting, industrial engineering, supply chain, data analytics or related fields, we've designed a job rotation program just for you! As a participant in ACCESS, you will rotate through diverse and challenging positions in finance, accounting and/or operations that help accelerate your development and drive strong business results.

Human Resources

Trying to decide between becoming an HR specialist or a generalist? This program gives you the opportunity to explore both with rotations as an HR business partner and one as a specialist focused on recruiting, compensation, development or employee relations. As a strategic partner, HR plays a critical role in the company's success and you can help ensure TI has the talent and capabilities needed to win in the highly competitive and dynamic semiconductor market.

Supply Chain

Dive into challenging projects and discover worldwide procurement and logistics knowledge. Identify cost reductions using supplier managed inventory, second sourcing and reverse auctions. Work with suppliers, fab management and engineering groups to implement cost reductions. Have the chance to engage with overseas suppliers to build a competitive advantage for TI.

At TI, you belong

We cultivate a performance-based, inclusive culture where ideas are respected and encouraged and opportunity abounds.
