Texas Instruments’ (TI’s) WiLink™ 4.0 mobile WLAN platform is a complete hardware and software offering optimized for mobile IEEE 802.11b/g, IEEE 802.11a/b/g applications. TI’s WiLink 4.0 platform offers two different hardware single-chip implementations to provide flexibility for OEMs to offer IEEE 802.11b/g or IEEE 802.11a/b/g operation. The WL1251 WiLink 4.0 802.11b/g solution and the WL1253 WiLink 4.0 802.11a/b/g solution are single chips which integrate the media access controller (MAC), baseband processor and RF transceiver. Additionally, both single chips support IEEE 802.11e/i/d/k and the WL1253 WiLink 4.0 802.11a/b/g solution also supports IEEE 802.11h/j.

The WL1251 and WL1253 WiLink 4.0 single-chip solutions are manufactured in 90 nm process technology and make extend TI’s leadership in single-chip integrated solutions using TI’s DRP™ technology to enable market leading physical size (6 mm x 6 mm BGA) and low power consumption. Industry’s lowest power consumption with TI’s ELPTM technology extends battery life of handsets, wireless PDAs and other mobile devices. Bluetooth® coexistence technology ensures high quality of service during simultaneous voice and data WLAN and Bluetooth operations.

The WiLink Software Development Kit (SDK) 4.X included with the WiLink 4.0 platform is optimized for embedded applications. This includes support for Linux®, Windows® WinCE™, Symbian™ operating systems, as well as lab testing and manufacturing software. It is also partitioned to minimize host CPU loading and power consumption in mobile applications.
The WiLink 4.0 platform also includes support for Voice over WLAN (VoWLAN) applications which are driving WLAN adoption in mobile devices. As single-chip solutions with low cost, power and small size, the WL1251 and WL1253 WiLink 4.0 solutions are driving VoWLAN access into consumer cell phones. WiLink 4.0 solutions are VoWLAN-ready with support of:

- UMA (Unlicensed Mobile Access) technology
- VoIP over WLAN
- Quality of service, WPA, WPA2, CCX2.0, 3.0 and 4.0 for application specific devices
- Advanced roaming support enabling rapid migration between access points and between WLAN and cellular subsystems

The WiLink 4.0 mobile WLAN solutions have been optimized for low-power, battery-driven mobile wireless communications. As such, they support extended talk time as well as longer standby times by using TI’s ELP™ technology for low power standby modes and other advanced technology to deliver maximum battery life.

Designed for interoperability and coexistence, the WiLink 4.0 mobile WLAN single-chip solutions are capable of cost-efficient collaboration and effective coexistence with short-range Bluetooth personal area networking (PAN). For instance, WLAN and Bluetooth technologies are able to share the same antenna and antenna filter, reducing bill of materials (BOM) costs and circuit board space. In addition, TI’s WLAN/Bluetooth coexistence technology ensures effective simultaneous operations of voice and data.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
