

TI Space Products Guide

Radiation-hardened and radiation-tolerant products
to help innovate your space designs

Space Products Guide

Overview/table of contents

TI space products

Our heritage in space applications spans over 60 years, dating as far back as 1958 when the first satellite launched by the U.S., Explorer I, carried aloft radiation detection circuitry using the newly released TI 2N335 silicon-grown junction transistor. From that first satellite, to the first moon landing and first comet landing, to exploring the planets, TI semiconductor devices have been there.

We focus on radiation performance and best-in-class performance products to both our **QMLV / QMLP (typically identified by the -SP suffix)** and **radiation tolerant (identified by the -SEP suffix)** portfolios. The breadth of TI's space portfolio provides a full signal-chain solution. The portfolio includes the smallest RHA point-of-load power solutions, fast discrete SerDes and some of the world's highest performance data converters.

TI's Space products include MIL-PRF-38535 QMLV / QMLP, RHA, and radiation tolerant plastic components. These devices are typically supported with Total Ionizing Dose (TID) and Single Event Effects (SEE) test reports to address potential product degradation in a space environment. The test results for these devices are available in the product folder under the Technical documents tab.

Satellite applications

- Communications payload
- Laser communications payload
- Radar imaging payload
- Optical imaging payload
- Navigation payload
- Scientific exploration payload
- Command & data handling (C&DH)
- Attitude & orbit control system (AOCS)
- Satellite electrical power system (EPS)
- Satellite mechanisms
- Launchers, landers and rovers

TI space products portfolio

TI offers RHA and radiation-tolerant, hermetically packaged components highlighted in each of the red blocks to the right. TI also offers many of these space grade products in die form (known good die or tested die).

For acronyms specific to space terminology, see the end of this document.

Space-grade power management

Featured products

3- to 7-V_{IN}, 18-A, current-mode monolithic point-of-load DC/DC converter TPS7H4001-SP / TPS7H4003-SEP

Key features

- 0.6 V ±1.5% V_{REF} accuracy over load, line, temp and TID
- Integrated high-side and low-side power MOSFETs
- Programmable frequency from 100–1000 kHz
- Parallel support for 2–4 devices with 180° or 90° Φ shifted SYNC1 and SYNC2 pins (50-kHz master/slave operation)
- Configurable softstart/tracking, external compensation, power good, enable
- Configurable slope compensation
- QML Class-V: 34-pin CDFP, 7.6 mm x 21.6 mm
- QML Class-P: 44-pin HTSSOP, 6.1mm x 14.0mm
- Space EP: 44-pin HTSSOP, 6.1mm x 14.0mm

Radiation performance

- Rad-hard (RHA) TPS7H4001-SP:
 - TID characterization to 100 krad(Si)
 - SEL immunity to 75 MeV-cm²/mg at 125°C
- Rad-tolerant TPS7H4003-SEP:
 - TID characterization to 50 krad(Si)
 - SEL immune to 43 MeV-cm²/mg at 125°C

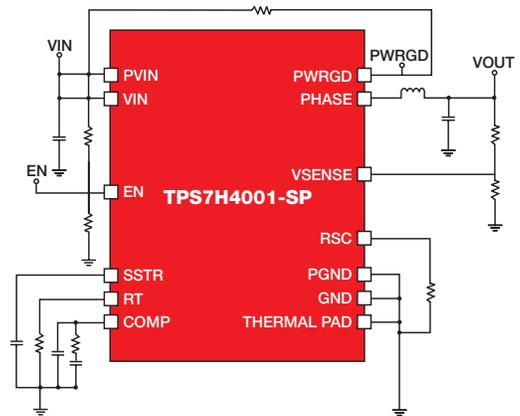

More information at www.ti.com/product/TPS7H4001-SP
and at www.ti.com/product/TPS7H4003-SEP

Applications

- Space satellite power management and distribution
- Radiation-hardened and tolerant power-tree applications

Benefits

- Higher output current in smaller footprint for powering high-current FPGA and ASIC core voltage rails
- Ease of implementing sequencing schemes
- Easily paralleled for even higher currents with no external components and no external clock needed

1.6-V to 5.5-V, 1.25 A, load switch in small plastic package TPS7H2221-SEP

Key features

- Space Enhanced Plastic (-SEP): Controlled baseline, product traceability, gold bond wire, Ni-Pd-Au lead finish, enhanced mold compound for low outgassing.
- On Resistance (R_{ON}) of 115 mΩ (typ.) at VIN=5 V @ 25 °C
- Fixed controlled slew rate, short-circuit protection, thermal shutdown and quick output discharge (QOD)
- Low control input threshold enables use of 1.5 V to 5.5 V logic
- SOT 6-pin package: 2.0 x 2.1 mm

Applications

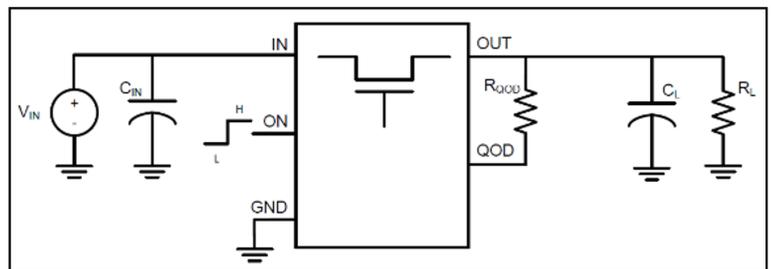

- Space Satellite Power Management and Distribution
- Radiation Hardened and Tolerant Power Tree Applications

Radiation performance

- TID = 30 krad(Si) RHA
- SEL/SEB/SEGR immune to LET = 43 MeV-cm²/mg
- SET/SEFI characterized to LET = 43 MeV-cm²/mg

Benefits

- Validated radiation performance with Radiation Lot Acceptance Testing (RLAT) up to 20krad(Si)
- Smallest form factor load switch for space
- Quick Output Discharge for known “zero” state at t₀
- Automatic Protection and Recovery from Short Circuits
- Thermal Shutdown to Protect Against Overheating
- Controlled inrush current during system power-up
- Able to parallel for current sharing and reduced R_{ON}

More information at www.ti.com/product/TPS7H2221-SEP

Space-grade power management

Featured products

Radiation-hardened high-speed dual-output current-mode pulse-width modulation controller

TPS7H5001-SP / TPS7H5005-SEP

Key features

- $0.6\text{ V} \pm 1\% V_{REF}$ accuracy over load, line, temperature and TID
- Configurable switching frequency from 100 kHz to 2 MHz.
External synchronization using SYNC pin
- 5-V outputs, 150 mA drive, $R_{OUT} = 15\ \Omega$
- Synchronous rectification outputs, dead time (PS and SP) and duty cycle limit configurable (leading edge blanking)
- Configurable soft start, EN (UVLO), FAULT (OCP, OVP and OTP) slope compensation and current limit, Hiccup OCP mode
- QML Class-V: 22-pin CDFP, 6.2mm x 7.7mm
- QML Class-P: 24-pin TSSOP, 4.4mm x 7.7mm
- Space EP: 24-pin TSSOP, 4.4mm x 7.7mm

Radiation performance

- Rad-hard (RHA) TPS7H5001-SP:
 - TID characterization to 100 krad(Si)
 - SEL immunity to 75 MeV-cm²/mg at 125°C
- Rad-tolerant TPS7H5005-SEP:
 - TID characterization to 50 krad(Si)
 - SEL immunity to 43 MeV-cm²/mg at 125°C

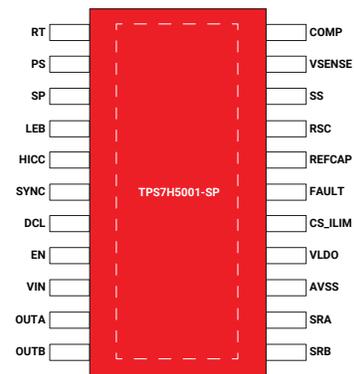

Applications

- Space satellite power management and distribution
- Radiation-hardened and tolerant power tree applications

More information at www.ti.com/product/TPS7H5001-SP and at www.ti.com/product/TPS7H5005-SEP

Benefits

- Support for non-isolated (buck, boost) and isolated (flyback, forward, active clamp, push-pull, half/full-bridge) topologies
- External driver allows support of Si MOSFETs and GaN FETs
- High level of features integration minimizes radiation risks and overall solution size
- Synchronous rectification to enable higher efficiency
- During the cross conduction SET testing, zero events were recorded

3- to 7-V_{IN}, 6-A monolithic point-of-load DC/DC converter

TPS50601A-SP

Key features

- $PV_{IN} = V_{IN} = 3.0\text{ V to }7\text{ V}$
- 6-A maximum output current
- Min output voltage to 0.8 V
- Integrated 58-m Ω high-side and 50-m Ω low-side power FETs
- Adjustable frequency from 100 kHz to 1.0 MHz
- Parallel operation 180° out of phase with sync pin
- Integrated tracking function
- $R_{\theta JC} = 0.6^\circ\text{C/W}$
- Packaged in thermally enhanced 20-pin ceramic flatpack (HKH) and known good die (KGD)

Radiation performance

- TID = 100 krad(Si) RHA
- SEL, SEB and SEGR immune to LET = 75 MeV-cm²/mg
- SET/SEFI onset 65 MeV-cm²/mg

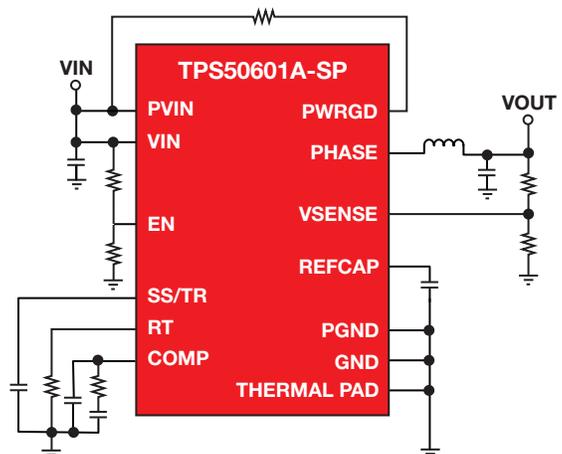

Applications

- Satellite point-of-load (POL) power supplies

More information at www.ti.com/product/TPS50601A-SP

Benefits

- RHA qualified and orderable as SMD: 5962R1022102VSC (RHA) 5962R1022102V9A (KGD)
- 96.6% peak efficiency ($V_{OUT} = 3.3\text{ V}$) and low V_{OUT} optimized
- Excellent for driving 12-A current through current share
- Ease of implementing power sequencing schemes
- Best-in-class thermal performance
- WEBENCH® and PSpice models available

Space-grade power management

Featured products

1.5- to 7-V_{IN} 3-A low-dropout regulator

TPS7H1101A-SP

Key features

- V_{IN} = 1.5 V to 7 V
- Ultra-low dropout, PMOS pass device
 - 62 mV (typ) @ 1 A, 335 mV (Max) at 3 A
- Very-high accuracy = ±2%
 - Internal V_{REF} = ±1.8%
- Ultra-low noise: 20.33 μV_{RMS}
- PSRR: >45 dB at 1 kHz
- Programmable softstart and OCP (with current reading)
- Enable across all input voltages and power good output (for sequencing)
- Temperature range: -55°C to 125°C
- Packaged in thermally enhanced 16-pin ceramic flatpack

Radiation performance

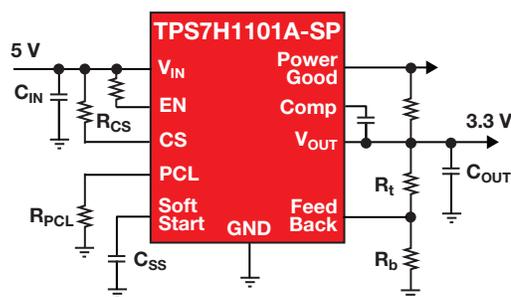

- TID = 100 krad(Si) RHA
- SEL immune to LET = 85 MeV-cm²/mg
- SET onset 52 MeV-cm²/mg

Applications

- Power management – LDO
- High PSRR and low noise for clean analog-supply requirement applications

Benefits

- RHA qualified: 5962R1320202VXC
- ELDRS free
- High power savings with lowest V_{IN} on the market for LDO

More information at www.ti.com/product/TPS7H1101A-SP

Wide V_{IN} (2.3 to 20 V) 1.5-A low-dropout regulator

TPS7A4501-SP

Key features

- V_{IN} = 2.3 V to 20 V
- Adjustable output from 1.21 V to 20 V
- Optimized for fast transient response
- Low noise: 35 μV_{RMS} (10 Hz to 100 kHz)
- High ripple rejection: 68 dB at 1 kHz
- No protection diodes needed
- Less than 1-μA quiescent current in shutdown
- Reverse battery and reverse current protection
- Thermally enhanced 10-pin CFP (HKU) package

Radiation Performance

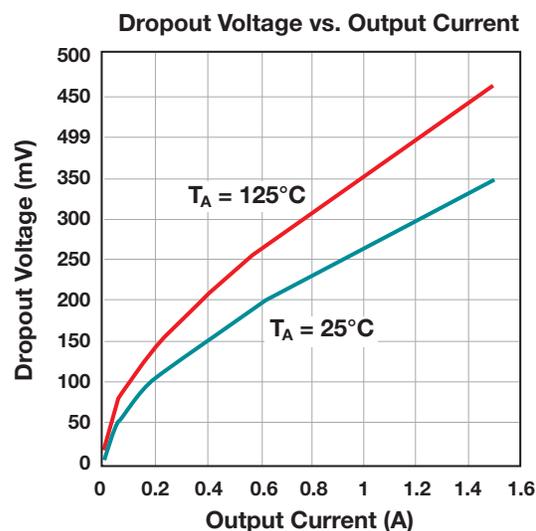

- Total dose (TID) = 100 krad(Si) RHA
- SEL immune to LET = 85 MeV-cm²/mg
- SET immune to LET = 75 MeV-cm²/mg for V_{OUT} < 5%

Applications

- Power management – LDO
- Satellite point-of-load (POL) power supplies
- Satellite bus and payload

Benefits

- RHA qualified and orderable as SMD: 5962R1222403VXC
- Outstanding low-noise performance
- Widest input voltage range for a RHA LDO

More information at www.ti.com/product/TPS7A4501-SP

Space-grade power management

Featured products

0.85 V – 7 V V_{IN} , 2.2 V – 14 V V_{BIAS} , 1.5 A, low-noise, high PSRR performance LDO

TPS7H1111-SP / TPS7H1111-SEP

Key features

- Ultra-Low Noise: 1.68 μ V_{RMS} (10 Hz – 100 kHz)
- Ultra-low 1/f noise: 100 nV/Hz^{1/2} (typ at 10 Hz)
- High PSRR: 71 dB @ 100 kHz, 67 dB @ 1 MHz
- V_{OUT} : 0.4 V to 5.5 V
- Very high accuracy: \pm 1.5% across line, load, temperature, & radiation
- Low dropout: 200 mV (typ) @ 1 A, 450 mV (max) at 1.5 A
- Bias supply to minimize power dissipation (Set $V_{BIAS} \geq V_{OUT} + 1.6$ V)
- Ability to easily parallel multiple devices for higher output current
- Programmable soft start
- Enable and configurable power good threshold and indicator
- Exposed control loop with the external compensation STAB pin
- Configurable current limit behavior (brick-wall or turn-off)
- QML Class-V: 14-pin CDFP, 8.0mm x 9.1mm
- QML Class-P & -SEP 28-pin HTSSOP, 4.4mm x 9.7mm

Radiation performance

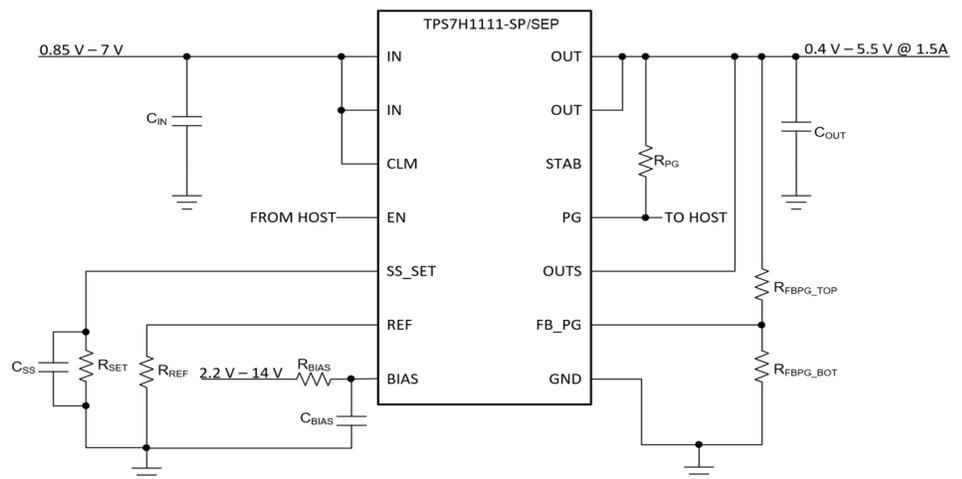

- Rad Hard (RHBD) TPS7H1111-SP:
 - TID (LDR & HDR) = 100 krad(Si)
 - SEL/SEB/SEGR immune to 75 MeV*cm²/mg
 - SET/SEFI characterized to LET = 75 MeV*cm²/mg
- Rad Tolerant TPS7H1111-SEP:
 - TID characterization to 50 krad(Si)
 - SEL/SEB/SEGR immune to 43 MeV-cm²/mg
 - SET/SEFI characterized to LET = 43 MeV*cm²/mg

Applications

- Power for high-speed and high-accuracy circuits
 - VCOs (voltage controlled oscillators)
 - Data Converters: ADCs and DACs (analog-to digital and digital-to-analog converters)
 - PLLs (phase-lock-loops), SerDes (serializer and deserializers), Imaging sensors
- Accurate supply for precision ASIC and FPGA supply rails

Benefits

- Lowest noise, highest PSRR LDO in space industry
- Enable full performance of high speed and high precision circuits through clean power supply generation without bulky filters recorded

More information at www.ti.com/product/TPS7H1111-SP and at www.ti.com/product/TPS7H1111-SEP

Space-grade interface

Featured products

3.3-V CAN transceiver

SN55HVD233-SP / SN55HVD233-SEP

Key features

- Compatible with ISO 11898-2
- Data rates up to 1 Mbps
- Extended -7-V to 12-V common mode range
- High-input impedance allows for 120 nodes
- LVTTTL I/Os are 5-V tolerant
- Unpowered node does not disturb the bus
- Temperature range: -55°C to 125°C
- Available in 8-pin 6.48 × 6.48-mm ceramic flat pack (HKX)
- Bus pins ESD protection exceeds ±16 kV HBM

Radiation performance

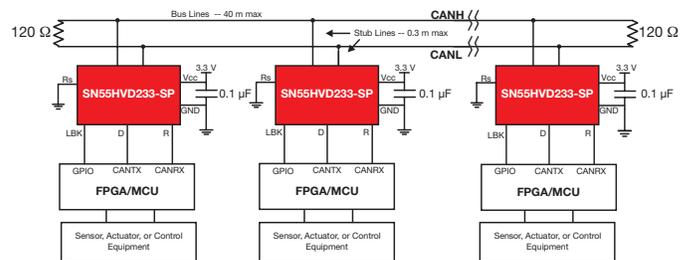

- Rad Hard (RHA) SN55HVD2331-SP:
 - TID = 50 krad(Si) RHA
 - SEL immune to 86 MeV*cm²/mg
- Rad Tolerant SN55HVD2331-SEP:
 - TID characterization to 30 krad(Si)
 - SEL immune to 43 MeV*cm²/mg

Applications

- Spacecraft backplane data bus communication and control
- Telemetry/Sensor data transmission
- CAN bus standards such as CANopen, DeviceNet, CAN Kingdom, ISO 11783, NMEA 2000, SAE J1939

Benefits

- RHA qualified and orderable as SMD: 5962L1420901VXC
- Thermal shutdown protection
- Adjustable driver transition times for improved signal quality

More information at www.ti.com/product/SN55HVD233-SP

and at www.ti.com/product/SN55HVD233-SEP

RS-485 differential bus transceiver

DS16F95QML-SP

Key features

- Designed for multipoint transmission
- Wide positive and negative input/output bus voltage ranges
- Thermal shutdown protection
- Driver positive and negative current-limiting
- High-impedance receiver input
- Receiver input hysteresis of 50 mV typical
- Operates from single 5.0-V supply
- Available in 10-pin ceramic flatpack

Radiation performance

- TID = 300 krad(Si) RHA

Applications

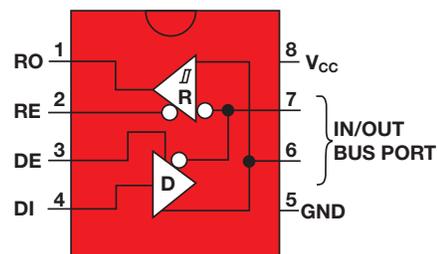

- Satellite communication
- Defense electronics
- Radar and guidance systems

Benefits

- Orderable as SMD RHA: 5962F8961501VHA
- Meets EIA-485 and EIA-422A specifications
- Meets SCSI-1 (5 MHz) specifications
- RHA and QMLV qualified

Other drivers/receivers in RS-485 family (Tx, Rx, 3.3 V, 5 V)

- DS96F174MQML-SP quad high-speed differential driver
- DS96F175MQML-SP quad high-speed differential receiver

More information at www.ti.com/product/DS16F95QML-SP

Space-grade interface

Featured products

Radiation-hardness-assured (RHA), 10/100/1000 Gigabit Ethernet PHY with SEFI monitor

DP83561-SP

Key features

- TID: 300 krad (Si), QMLV-RHA qualified
- SEL immune > 121 MeV-cm²/mg at max temp and voltage ratings
- SEU: No link drops and low packet loss up to 48 MeV-cm²/mg
- SEFI support suite:
 - Configuration registers protection: ECC corrects SEFI related bit changes
 - PHY state machine monitor: Looks for invalid changes
 - Supply current monitor: Indicates general PHY health to system
 - Interrupt indication for monitors
 - PLL lock monitor
- Operating temperature range: -55 to 125°C
- MAC I/Fs: RGMII, MII
- IEEE 1000Base-T, 100Base-TX, 10Base-T
- 64-pin CFP (11 mm × 11 mm)

Radiation performance

- TID = 300 krad(Si) RHA
- SEL immune to LET = 121 MeV-cm²/mg

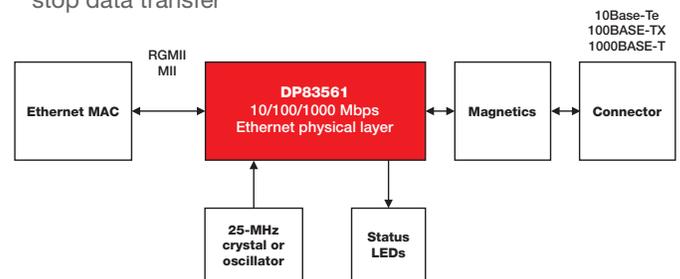

More information at www.ti.com/product/DP83561-SP

Applications

- Space/satellite communications

Benefits

- **EMDIO register monitor:** Changes in PHY configuration registers will be indicated to system for action/correction
- **PHY PCS state machine monitor:** Invalid state changes may be indicative of SEFI, system is notified to adjust accordingly
- **Supply current monitor:** SEFI events may cause PHY failure modes undetectable by other method
- **PLL lock monitor:** Loss of lock indication can be used to stop data transfer

Space-grade data converters

Featured products

Octal, 128-kSPS, simultaneous-sampling 24-bit delta-sigma ADC

ADS1278-SP

Key features

- Simultaneous sampling of 8 inputs via independent 24-bit delta-sigma ADCs capable of converting up to 128 kSPS
- Bandwidth: 70 kHz
- Signal-to-noise ratio (SNR): 111dB
- Total harmonic distortion (THD): -96 dB (Max.)
- Operating temperature -55 to 125°C
- 84-lead ceramic HFQ 10 mm × 10 mm

Radiation performance

- TID = 75 krad, 50 krad(Si) RHA
- SEL immune to LET = 69 MeV-cm²/mg (125°C)

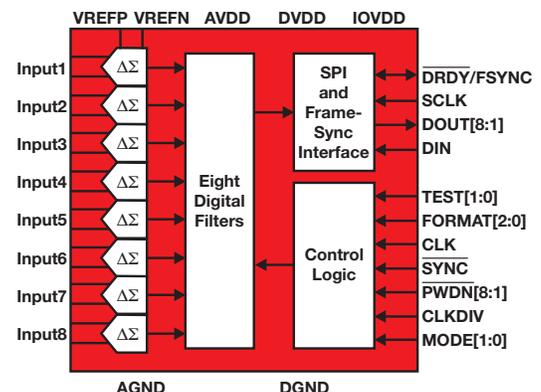

Applications

- Orbital observation systems
 - Satellite, shuttles, space stations, launchers
- Satellite sensing and closed-loop control
- Space scientific instrumentation

More information at www.ti.com/product/ADS1278-SP

Benefits

- Offers easy implementation of simultaneous analog-to-digital conversion for multiple inputs sourced from a wide range of transducers without the need of using an external multiplexer
- Allows accurate measurement of AC signals in the presence of noise; its highly linear transfer function provides high-fidelity and undistorted conversions
- Allows user to better resolve low-level signals found especially in the fields of satellite sensors

Space-grade data converters

Featured products

High-resolution delta-sigma analog-to-digital converter

ADS1282-SP

Key features

- Very high resolution:
 - 130-dB SNR (250 SPS, $G = 1$)
 - 125-dB SNR (250 SPS, $G = 16$)
 - Integrated low-noise ($5nV/\sqrt{Hz}$) high-gain (1–64V/V) PGA
- Ultra linear
 - THD = –122 dB, INL = 0.5 ppm
- Two-channel input MUX
- Low power consumption: 25 mW (high-res); 10 μ W (standby)
- Flexible digital filter (sync, FIR or IIR)
- Packaged in thermally enhanced CFP package

Radiation performance

- TID = 50 krad(Si) RHA
- SEL immune to 50 MeV-cm²/mg @ 125°C
- SEL immune to 60 MeV-cm²/mg @ 85°C

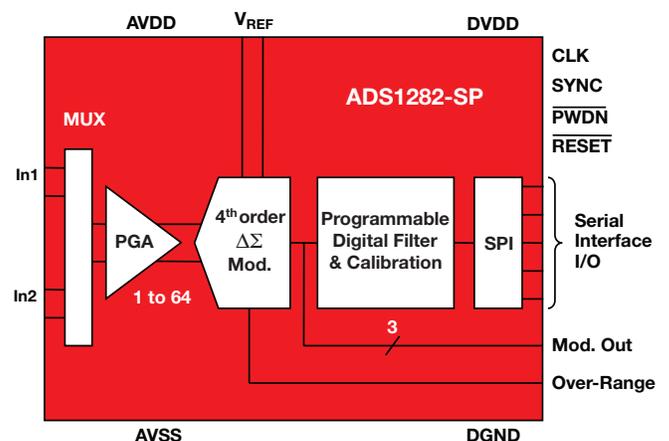

Applications

- Orbital observation systems (e.g., satellite, shuttles, space stations, launchers)
- Satellite temperature and bridge sensor measurements
- Space scientific instrumentation

Benefits

- RHA qualified and orderable as SMD: 5962L1423101VXC
- Allows user to acquire wide dynamic-range signals in satellite-telemetry sensors
- Minimal distortion to convert signals for frequency-domain analysis and post processing
- Selectable digital filter assures a flexible design that will meet the requirements of the most demanding applications

ADS1282: MUX + PGA + Modulator + Digital Filter

More information at www.ti.com/product/ADS1282-SP

Dual-channel, 14-bit, 40-MSPS analog front end

LM98640QML-SP

Key features

- Fully integrated signal-processing solution for imaging systems
- Correlated double sampling (CDS) or sample/hold (S/H) processing for CCD or CIS sensors
- Serialized LVDS outputs
- Dual lane at 16× sample rate or quad lane at 8× sample rate
- Programmable sampling edge up to 1/64th pixel period
- Programmable analog gain for each channel
- Programmable analog offset correction
- Integrated low-noise ($5nV/\sqrt{Hz}$) high-gain (1–64V/V) PGA

Radiation performance

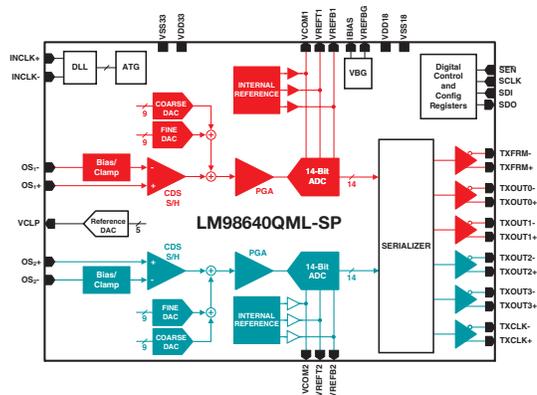

- TID = 100 krad(Si) RHA
- SEL and SEFI immune to LET > 120 MeV-cm²/mg

Applications

- CCD arrays
- CMOS image sensors
- Earth observation
- Star tracker
- Satellite temperature and bridge sensor measurements

Benefits

- RHA qualified and orderable as SMD: 5962R1820301VXC
- Enables digitization on the focal plane
 - No cabling
 - Reduced weight
- Low power consumption
- Meets space reliability requirements
- TID and SEU characterization data available for faster design in

Space-grade data converters

Featured products

12-bit, dual 5.2-GSPS or single 10.4-GSPS ADC

ADC12DJ5200-SP / ADC12DJ5200-SEP

Key features

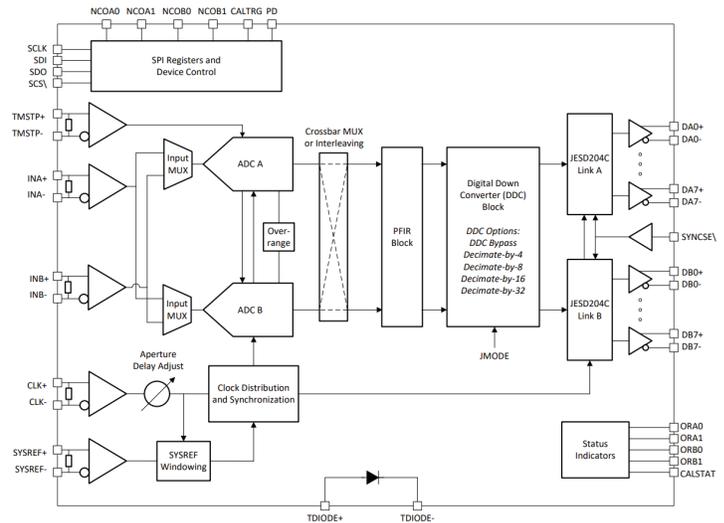

- 12-bit ADC with 8-GHz input bandwidth
- 10.4-GSPS as single, 5.2-GSPS as dual
- Noise Floor: -154.4 dBFS/Hz
- ENOB: 8.6 Bits
- Easy-to-use synchronization features
- 17.16Gbps JESD204B/C serial data interface
- Optional 4x-32x complex decimation
- Peak RF Input Power (Diff): +26.5 dBm
- Programmable FIR filter for equalization
- Power consumption: 4 W

Radiation performance

- Rad Hard ADC12DJ5200-SP:
 - TID = 300 krad(Si) RHA
 - SEL and SEFI immune to LET > 120 MeV-cm²/mg
- Rad Tolerant ADC12DJ5200-SEP:
 - TID characterization to 30 krad(Si)
 - SEL immune to 43 MeV-cm²/mg at 125°C

Applications

- Wideband Satellite communications (SATCOM)
- RF-sampling software-defined radio (SDR)
- Spectrometry
- RADAR / LIDAR

More information at www.ti.com/product/ADC12DJ5200-SP and at www.ti.com/product/ADC12DJ5200-SEP

Quad-channel, 12-bit, 1.6-GSPS ADC with JESD204C interface and integrated sample clock generator

ADC12QJ1600-SP / ADC12QJ1600-SEP

Key features

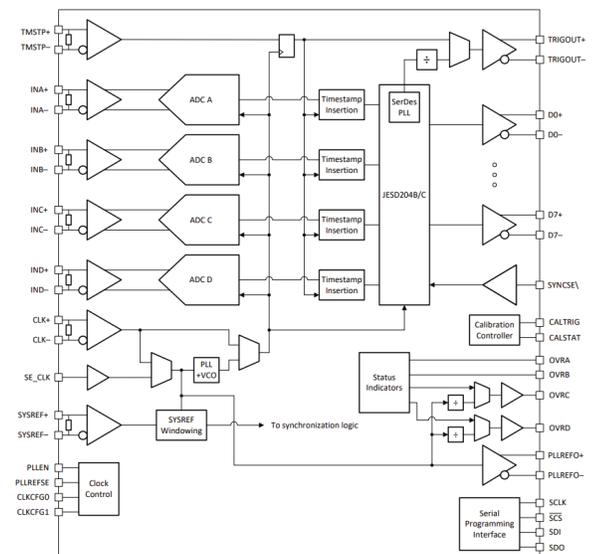

- Four channel 6-GHz 12 Bit 1.6-GSPS ADC
- Internal dither reduces high-order harmonics
- SNR (100 MHz): 57.4 dBFS
- ENOB (100 MHz): 9.1 Bits
- SFDR (100 MHz): 64 dBc
- Noise floor (-20 dBFS): -147 dBFS
- Easy-to-use synchronization features
- 17.16Gbps JESD204B/C serial data interface
- Power consumption: 1.9 W at 1 GSPS

Radiation performance

- Rad Hard ADC12QJ1600-SP:
 - TID = 300 krad(Si) RHA
 - SEL and SEFI immune to LET > 120MeV-cm²/mg
- Rad Tolerant ADC12QJ1600-SEP:
 - TID characterization to 30 krad(Si)
 - SEL immune to 43 MeV-cm²/mg at 125°C

Applications

- LIDAR / RADAR
- Spectrometry
- Electronic warfare (SIGINT, ELINT)
- Satellite communications (SATCOM)

More information at www.ti.com/product/ADC12QJ1600-SP and at www.ti.com/product/ADC12QJ1600-SEP

Eight-channel 12-bit 50-kSPS to 1-MSPS analog-to-digital converter

ADC128S102QML-SP / ADC128S102-SEP

Key features

- Eight input channels
- V_A : 2.7 V to 5.25 V; V_D : 2.7 V to V_A
- 2.3 mW with 3-V supply and 0.06 μ W at shutdown
- DNL: -0.5 to $+0.9$ LSB (typ); INL: ± 0.9 LSB (typ)
- SPI digital output
- ADC addressing through CS decoder
- SPI/QSPI/MICROWIRE/DSP compatible
- ADC128S102QML-SP: 16-pin ceramic SOIC, CFP and die
- ADC128S102-SEP: 16-pin plastic TSSOP package (5.0 \times 4.4 mm)

Radiation performance

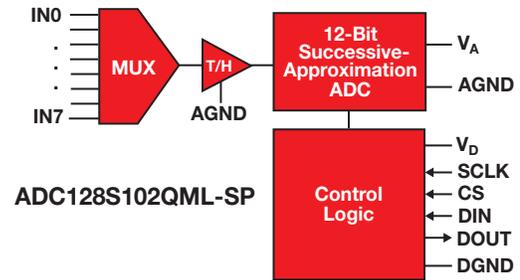

- Rad Hard (RHBD) ADC128S102QML-SP:
 - TID = 100 krad(Si) RHA
 - SEL and SEFI immune to LET > 120 MeV-cm²/mg
- Rad Tolerant ADC128S102-SEP:
 - TID characterization (ELDRS free) to 30 krad(Si)
 - SEL immune to 43 MeV-cm²/mg at 125°C

Applications

- Sensors, thermistors, motor control
- Satellite system health, power-supply voltage and current monitoring

Benefits

- Eight sensors can be monitored with one ADC
- All ADC serialized data shares the same input bus to onboard FPGA/ASIC
- Ultra-low power consumption

More information at www.ti.com/product/ADC128S102QML-SP and at www.ti.com/product/ADC128S102-SEP

12-Bit Telemetry & Control – 16 ADC, 12 DAC, and Temperature Sensor with GPIO

AFE11612-SEP

Key features

- ADC, 12-Bit, 16-Ch, Single-Ended or Differential Options
- DAC, 12-Bit, 12-Ch, 0 to 5V or 0 to 12.5V
- Temperature Sensors
 - Two (2) Remote Sensors
 - One (1) Local/Internal Sensor
- Internal 2.5V Reference
- I2C or SPI Interface
- 8 GPIO
- 64-Pin Plastic HTQFP Package (10 x 10 mm)

Applications

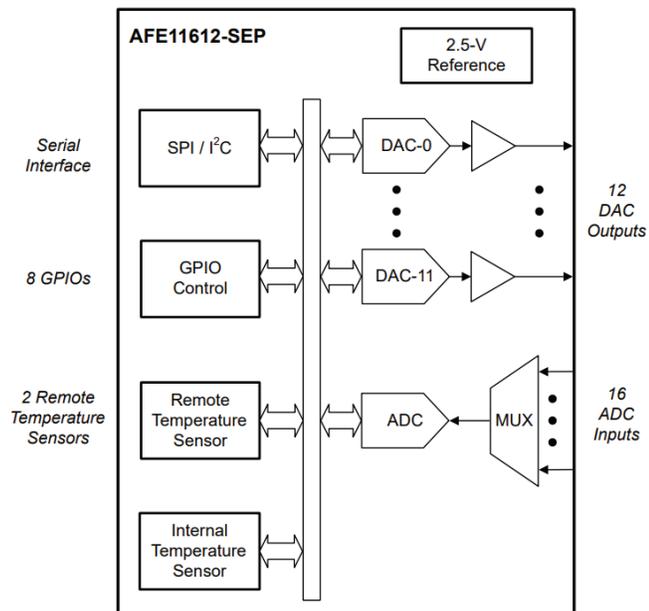

- Command and data handling (C&DH)
- Communications payload
- Radar imaging payload
- Optical imaging payload
- General analog monitoring and control

Radiation performance

- TID = 20 krad(Si) RLAT
- SEL/SEB/SEGR immune to LET = 43 MeV-cm²/mg
- SET/SEFI characterized to LET = 43 MeV-cm²/mg

Benefits

- High Integration
- Vendor Item Drawing (VID)

More information at www.ti.com/product/AFE11612-SEP

Space-grade amplifiers

Featured products

850-MHz gain bandwidth, rail-to-rail output, negative rail input precision fully differential amplifier

LMH5485-SP / LMH5485-SEP

Key features

- Single channel, fully differential amplifier (FDA)
- Single supply range: 2.7 to 5.4 V
- I_Q : 10.1 mA
- Power-down current: $\sim 2 \mu\text{A}$
- Bandwidth: $\sim 500 \text{ MHz}$ @ $G = 2 \text{ V/V}$ (GBW = 850 MHz)
- Input voltage noise: $2.2 \text{ nV}/\sqrt{\text{Hz}}$
- THD: -140 dBc @ 2 V_{pp} , 1 MHz
- Typical $V_{\text{OS}} / V_{\text{OS}}$ drift: $\pm 100 \mu\text{V} / \pm 0.5 \mu\text{V}/^\circ\text{C}$
- Operating temperature range: -55°C to 125°C

Radiation performance

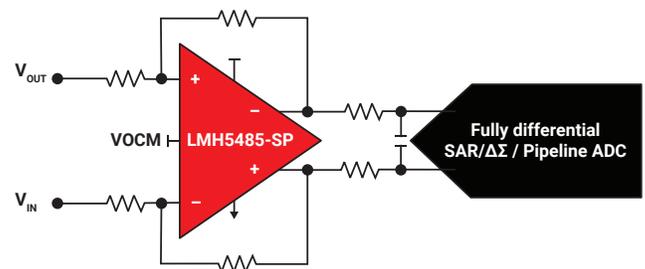

- Rad-hard (RHA) LMH5485-SP:
 - TID characterization to 100 krad(Si)
 - SEL immunity to $85 \text{ MeV}\cdot\text{cm}^2/\text{mg}$ at 125°C
- Rad-tolerant LMH5485-SEP:
 - TID characterization to 30 krad(Si)
 - SEL immune to $43 \text{ MeV}\cdot\text{cm}^2/\text{mg}$ at 125°C

Applications

- SE to DE
- ADC driver
- Narrow-band radar

Benefits

- Low offset voltage and offset voltage drift parameters allow for accurate measurements across temperature
- Offers excellent DC precision together with IF sampling support which makes it ideally suited for a wide range of applications
- Supports single-ended to differential conversion
- RLAT to 100-krad qualified for GEO applications

More information at www.ti.com/product/LMH5485-SP and at www.ti.com/product/LMH5485-SEP

Four-channel, 11-MHz gain bandwidth, low-noise ($5.1 \text{ nV}/\sqrt{\text{Hz}}$), rail-to-rail output precision ($120 \mu\text{V}$) junction FET operational amplifier

OPA4H014-SEP

Key features

- Gain bandwidth 11 MHz
- Slew rate $20 \text{ V}/\mu\text{s}$
- Input stage offset voltage $20 \mu\text{V}$ (max)
- Offset voltage drift $1 \mu\text{V}/^\circ\text{C}$ (max)
- Input bias current 10 pA (max)
- Supply current 1.8 mA (typ)
- Input stage voltage noise $5.1 \text{ nV}/\sqrt{\text{Hz}}$ at 1 kHz
- Current noise $0.8 \text{ fA}/\sqrt{\text{Hz}}$ at 1 kHz
- 0.1-Hz to 10-Hz noise $250 \text{ nV}_{\text{pp}}$
- 14-pin plastic package – TSSOP (PW) ($5.0 \text{ mm} \times 4.4 \text{ mm}$)

Radiation performance

- TID characterization (ELDRS free) to 30 krad(Si)
- SEL immune to $43 \text{ MeV}\cdot\text{cm}^2/\text{mg}$ at 125°C

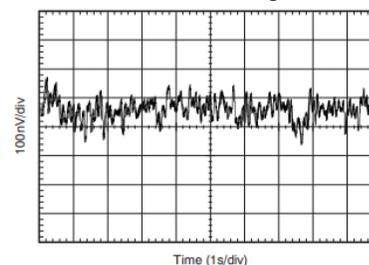

Applications

- Sensors
- Thermistors
- Instrumentation
- Telemetry / monitoring

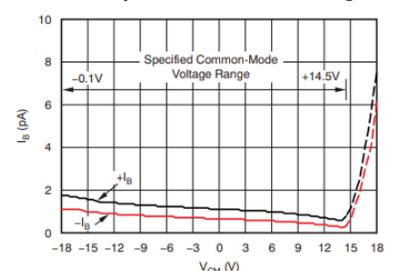

Benefits

- High accuracy, stability over full military temperature range
- Precision JFET provides better matching to high-impedance sources such as sensor outputs and very-low-input bias current
- Low total noise (voltage and current) enables a wide range of input impedance sources for minimal error contributions
- Better matching to high-impedance sources such as sensor outputs
- RLAT to 30-krad qualified for new space LEO applications

0.1-Hz to 10-Hz Voltage Noise

Low input bias across V_{cm} range

More information at www.ti.com/product/OPA4H014-SEP

Space-grade amplifiers

Featured products

12-V, quad femtoampere bias current, precision rail-to-rail input/output operational amplifier

LMP7704-SP

Key features

- Ultra-low input bias current: ± 500 fA (typ)
- Low offset voltage: ± 260 μ V (max)
- +2.7-V to +12-V supply operation
- Rail-to-rail input and output
- Unity gain bandwidth: 2.5 MHz
- Input voltage noise: 9 nV/ $\sqrt{\text{Hz}}$
- Supply current: 725 μ A/ch
- Package: 14-lead CFP, 9.9 mm \times 6.35 mm

Radiation performance

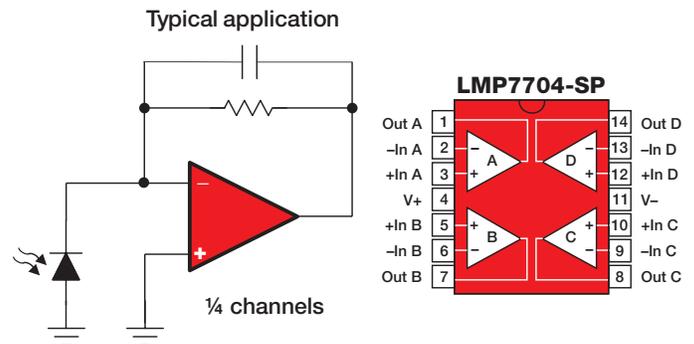

- TID = 100 krad(Si) RHA
- SEL = 85 MeV-cm²/mg (125°C)

Applications

- Precision transimpedance amplifier for satellite telemetry
- High-impedance satellite sensor interface
- High-gain amplifiers

Benefits

- RHA qualified
- Exceptional DC performance with lowest bias current available for space applications
- Unity gain stable operation
- Rail-to-rail with precision allows single op amp for most board applications

More information at www.ti.com/product/LMP7704-SP

Space-grade clocks and timing

Featured products

15-GHz low-noise wideband phase-locked loop with integrated voltage-controlled oscillation

LMX2615-SP

Key features

- Space grade 40-MHz to 15-GHz wideband synthesizer with phase synchronization and JESD204B support
- -110 dBc/Hz closed-loop phase noise at 100 KHz offset at 15-GHz carrier frequency
- 45-fs RMS jitter at 8 GHz (100 Hz to 100 MHz)
- Ability to synchronize output phase with OSCin
- > 50 fixed-pin programmable options
- Single 3.3-V supply
- 11 \times 11 mm² 64-lead CQFP ceramic package

Radiation performance

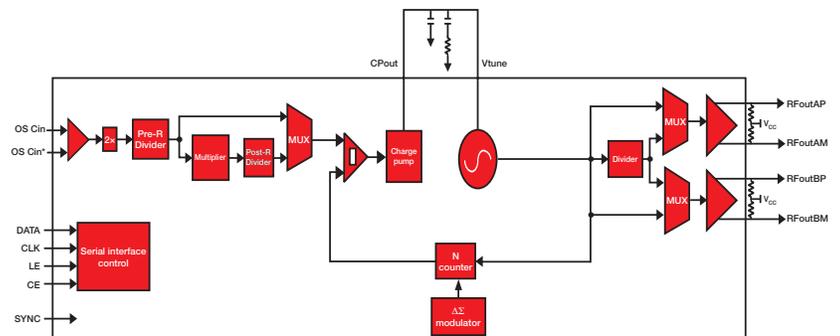

- TID = 100 krad(Si) RHA
- SEL/SEU immune to LET = 120 MeV-cm²/mg (125°C)

Applications

- Space communications
- Space radar systems
- Phased-array antennas and beam forming

Benefits

- Wideband clock source to generate any clock frequency for high-speed data converters
- Support for generating or repeating SYSREF compliant to JESD204B standard
- Save board space and complexity by replacing discrete components with LMX2615
- High-performance PLL can attain very low in-band noise and integrated jitter

More information at www.ti.com/product/LMX2615-SP

Space-grade clocks and timing

Featured products

JESD204B clock generator and jitter cleaner

LMK04832-SP / LMK04832-SEP

Key features

- Supports 7 JESD204B targets (7 device clock and 7 SYSREF) or 14 differential output clocks
- Dual-loop platinum PLL architecture
- 54-fs RMS jitter at 2.5 GHz, 61-fs RMS jitter at 3.2 GHz (12 kHz–20 MHz)
- Noise floor -156.5 dBc/Hz @ 3200 MHz
- CML swing: $1.2 V_{PP}$ differential @ 3.2 GHz
- 2 integrated VCO to support 2 independent frequency plans
 - VCO0 = 2440 to 2580 MHz
 - VCO1 = 2945 to 3255 MHz
- 320-MHz PLL2 maximum phase detector frequency
- -230 dBc/Hz PLL2 FOM and -128 dBc/Hz PLL2 1/f
- SYSREF analog delay 25-ps step resolution
- 0-delay mode for either dual loop or single loop
- JESD204B sourced from distribution or clock generation mode/Hz
- Holdover mode when input clock is lost
- Rad Hard: 64-pin ceramic with nonconductive tie bar
- Rad tolerant: 64-pin PAP0064E, 10mm x 10mm

More information at www.ti.com/product/LMK04832-SP and at www.ti.com/product/LMK04832-SEP

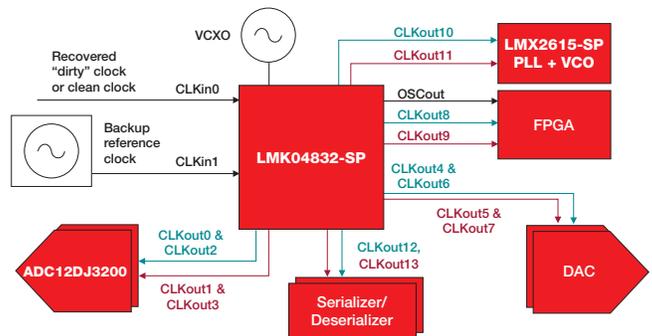

Radiation performance

- Rad-hard (RHA) LMK04832-SP:
 - TID characterization to 100 krad(Si)
 - SEL immunity to 120 MeV-cm²/mg at 125°C
- Rad-tolerant LMK04832-SEP:
 - TID characterization to 30 krad(Si)
 - SEL immune to 43 MeV-cm²/mg at 125°C

Applications

Low jitter noise with JEDEC JESD204B

- Space communications
- JESD204B clocking systems

Space-grade microcontrollers

Featured product

16-MHz ultra-low-power microcontroller with ferroelectric RAM and 40 inputs/outputs

MSP430FR5969-SP

Key features

- Extremely low power consumption 16-bit RISC architecture:
 - 100 μ A/MHz active
 - 0.02 μ A shutdown, 0.4 μ A standby
- 64 KB of non-volatile, ferroelectric RAM (FRAM)
- Integrated peripherals for system housekeeping, telemetry
 - Real-time clock (RTC)
 - Five 16-bit timers
 - 16-channel analog comparator
 - 12-bit analog-to-digital converter (ADC) with 16 inputs, internal reference and sample-and-hold
 - Serial interfaces supporting UART, SPI, I²C
 - Multi-function I/O ports
- Support for 32-kHz crystals or internal clock sources
- 48-pin VQFN and TQFP plastic packages for reduced size and weight

Radiation performance

- TID = 75 krad(Si), 50 krad(Si) RHA
- SEL immune to LET = 72 MeV-cm²/mg

Applications

- Spacecraft distributed telemetry and housekeeping
- Sensor management and data logging
- Satellite remote terminal units

Benefits

- Reduced SWaP needed for system housekeeping functions
- Housekeeping/telemetry can be offloaded from FPGA
- Reusable RTU architecture across subsystems

MSP430FR5969-SP

Ultra-low power 16-bit MCU	64-KB FRAM
16 MHz	Watch dog timer, Timer 0_A3, Timer 1_B3, Timer 2_A3, Timer 3_B3, Timer 4_B3
Real-time JTAG, Embedded emulation, BSL	2 UARTs or SPI 1 I ² C or SPI
32x32 Multiplier DMA (3 ch), CRC16	Power-on reset Brown-out reset XT1, VLO DCO ($\pm 2\%$), Real-time clock
Up to 3 1x8 + 1 1x3 I/O ports w/ interrupts / wake up	
Comp_D / Vref ADC12 (up to 16 ch)	

More information at www.ti.com/product/MSP430FR5969-SP

Space-grade microcontrollers

Featured products

Radiation Tolerant, Hercules™ ARM® Cortex®-R5F MCU TMS570LC4357-SEP

Key features

- Space Enhanced Plastic
 - Controlled Baseline, one Fabrication Site, one Assembly/Test Site
 - Gold Au wire
 - Available in Extended (-55°C to 125°C) Temperature Range
 - Extended Product Life Cycle & Extended Product-Change Notification
 - Product Traceability
 - Enhanced Mold Compound for Low Outgassing
- High-Performance Microcontroller with Advanced Fault detection, Safety-Critical Applications
 - Lockstep Arm® Cortex-R5F CPUs @ 300MHz With ECC-Protected Caches, ECC on Flash and RAM Interfaces
 - Built-In Self-Test (BIST) for CPU, High-End, Timers, and On-Chip RAMs
 - Error Signaling Module (ESM) With Error Pin
 - Voltage and Clock Monitoring, 3 temperature sensors on die
 - 4MB on-chip Flash
- Advanced Integration & networking
 - 10/100 ENET, CAN, SPI, I2C, UART interfaces
 - 2x high-end timers (N2HET), 2x A12-bit ADCs, Enhanced timing peripherals
 - Up to 145 GPIOs

Radiation performance

- TID characterization (ELDRS free) to 30 krad(Si)
- SEL immune to 43 MeV-cm²/mg at 125°C

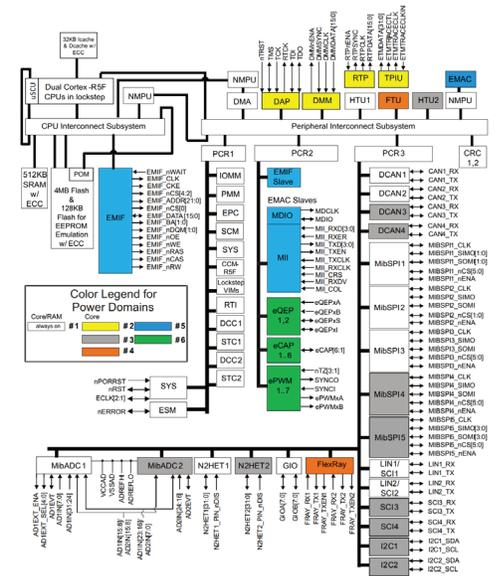

More information at www.ti.com/product/TMS570LC4357-SEP

Applications

- Spacecraft distributed processing
- Sensing & control

Benefits

- Radiation Lot Acceptance Testing (RLAT) to 20 krad(Si)
- Vendor Item Drawing (VID) TBD
- Lockstep ARM Cortex-R based MCU – with up to 500 peak DMIPS and 128KB to 4MB Flash Memory.
- Flexible Communication and Control – Ethernet, Flexray, CAN. Up to 84 timer and 41 12-bit ADC channels

Space-grade sensor products

Featured products

Very wide common voltage current-sense amplifier with split stage for filtering INA901-SP

Key features

- -15-V to 65-V common-mode range independent of supply
- 2.7-V to 16-V supply
- Split stages for filtering
- Bandwidth up to 130 kHz
- Gain: 20 V/V
- Package: Ceramic 8-lead HKX 6.5 mm × 6.5 mm

Radiation performance

- TID = 50 krad(Si) RHA
- SEL immune to LET = 75 MeV-cm²/mg

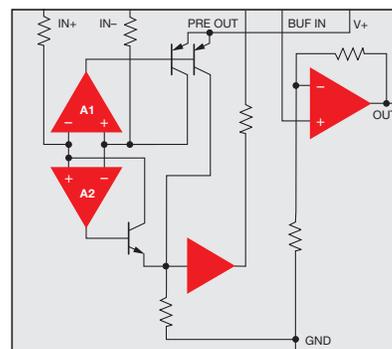

Applications

- Current monitor for current-mode control DC/DC converter
- Current measurement in an H-Bridge for motor control
- Latching current limiters on high common-mode bus
- Current sensing on GaN modules for increased efficiency

More information at www.ti.com/product/INA901-SP

Benefits

- Eliminates need for additional protective components in the event of CMR reversals
- Preserves buffered voltage output and saves using an additional op amp
- Simplifies design of current control loops
- Enables a flexible circuit design
- Orderable as SMD: 5962L1821001VXC

Space-grade sensor products

Featured products

Radiation-hardness-assured nine-channel (eight remote and one local) high-accuracy temperature sensor **TMP9R00-SP**

Key features

- 8-channel remote: $\pm 2.0^{\circ}\text{C}$ (max), local: $\pm 1.5^{\circ}\text{C}$ (max)
- Temperature resolution 0.0625°C
- Supply and logic voltage range: 1.7 V to 2 V
- 67- μA operating current, 0.3- μA shutdown current
- Remote diode features:
 - Series resistance cancellation
 - η -factor correction
 - Offset correction
 - Diode fault detection
- Register lock function secures key registers
- I²C or SMBus compatible two-wire interface with pin-programmable address

Radiation performance

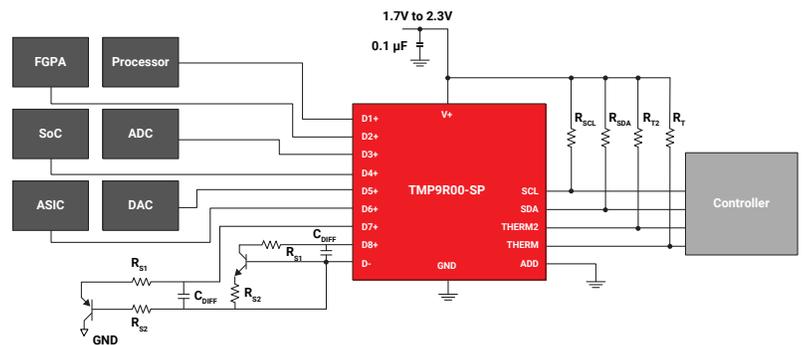

- TID = 100 krad(Si) RHA at LDR (10 mrad/s)
- SEL immune to LET = 76 MeV-cm²/mg

Applications

- Spacecraft FPGA, ADCs, DACs and ASIC temperature monitoring
- Spacecraft housekeeping and telemetry

Benefits

- Multi-zone temperature monitoring
- Increased temperature accuracy
- Flexible programming in each channel

¹ ECCN information for products that are EAR99 are shown. For up-to-date ECCN information on any product, please email: gtc_eccn-hts-naftteam@list.ti.com.

[†] EAR99 only pertains to certain device variants, including the following flight model devices: 5962-8754903VCA and 5962-8754903VDA.

Note: TI HiRel started releasing QMLV devices in 2001; at that time several logic devices were released as QMLV. However, TI did not perform any radiation testing on these early releases – as such, although third-party data might be available, most of these TI QMLV logic devices do not have radiation data available. In the tables above, radiation performance data is only included for devices where TI has performed radiation testing.

Note: TI HiRel started releasing QMLV devices in 2001; at that time several logic devices were released as QMLV. However, TI did not perform any radiation testing on these early releases – as such, although third-party data might be available, most of these TI QMLV logic devices do not have radiation data available. In the tables above, radiation performance data is only included for devices where TI has performed radiation testing.

Radiation-tolerant portfolio overview

Space EP

The space-enhanced plastic (Space EP) is a portfolio of radiation-tolerant devices designed for emerging NewSpace and LEO commercial applications. Space EP offers a cost-effective radiation-tolerant solution for shorter-duration and higher-volume space missions while providing the features highlighted below. TI identifies radiation-tolerant devices with the -SEP suffix.

Radiation performance

- TID characterization (ELDRS-free) to 30–50 krad(Si).
- TID RLAT to 20, 30 or 50 krad(Si).
- SEL immunity to 43 MeV·cm²/mg.

Reliability

- Military temperature range: –55°C to +125°C.
- Improved material set (gold-bond wires, no pure tin).
- Enhanced qualification (highly accelerated stress tests, extended temperatures, meets MIL-PRF 38535 Class N).
- Meets NASA's American Society for Testing and Materials 3595 outgassing specification.

TI space products – engineering models

TI engineering evaluation (/EM and -MPR) models are units intended for engineering evaluation only. While using the same die as fully qualified and processed space-grade products (QMLV or products appended with the suffix -MLS), they are processed to a noncompliant flow (for example, no burn-in) and tested to a temperature rating of +25°C only. These units are not suitable for qualification, production, radiation testing or flight use. Engineering models are not specified for performance over the full military specified temperature range of –55°C to +125°C or for operating life. For more information about engineering models, see the “[Texas Instruments Engineering Evaluation Units Versus MIL-PRF-38535 QML Class V Processing](#)” application report.

TI space products – die products

In addition to packaged QMLV products and radiation-tolerant products, TI also offers a variety of space-grade die options, including:

QMLV known good die (KGD): TI fabricates, tests, and qualifies this die product in compliance with MIL-PRF-38535 QMLV with specification in an SMD. RHA versions are available.

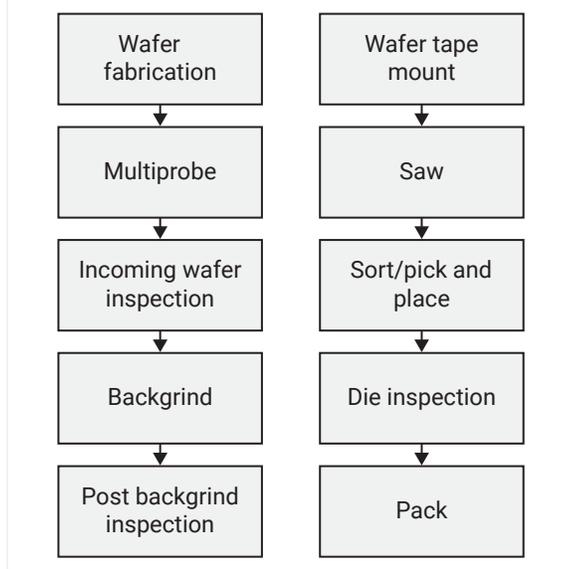

TI space-grade KGD: TI qualifies this die product by wafer lots manufactured and tested in accordance with MIL-PRF-38535; it is not included in an SMD, however.

TI Space EP KGD: TI qualifies this die product with TI's radiation-tolerant Space EP flow. See [ti.com/SEP](https://www.ti.com/SEP).

TI space-grade tested die: TI fabricates this die product on a MIL-PRF-38535-certified manufacturing line; it does not follow the QML manufacturing flow, however, and is tested for DC and functional performance only at ambient temperatures.

Engineering model (EM) die: This die product is intended only for engineering evaluation of its QMLV equivalent. EM die are processed to a noncompliant flow (no burn-in) and tested to a temperature rating of +25°C only. These units are not suitable for qualification, production, radiation testing or flight use. For more information about engineering models, see the “[Texas Instruments Engineering Evaluation Units Versus MIL-PRF-38535 QML Class V Processing](#)” application report.

Example flow (QMLV Class V KGD)

TI space products – mechanical samples

Mechanical samples (dummy packages) are nonelectrically functional packages (typically without the die) used for mechanical evaluations or process setups. TI offers a number of space product mechanical samples.

Refer to the orderable part number listed in the tables below when ordering mechanical samples.

Mechanical samples

Description	Tailored for high-volume commercial applications and flexible supply.	High reliability for automotive applications with flexible supply. Packages can use matte Sn and Cu bond wires.	Controlled baseline ensures more homogenous performance across lots. No Sn or Cu bond wire permitted. Uses increased reliability material set/homogeneous performance across lots. No Sn or Cu bond wire permitted. Uses increased reliability material set.	Ceramic military-grade parts released to a MIL spec. Intended for extreme environments and long-term dormant storage.	Space-grade parts meant for low-orbit missions. Screening for TID (Radiation Assured) high-reliability material set, similar to EP.	Space-grade parts in plastic package released to a MIL spec. Meant for long lifetime, high-reliability missions.	Space-grade, flip-chip parts with organic substrate released to a MIL spec. Meant for long lifetime, high-reliability missions.	Space-grade parts release to a MIL spec. Meant for long lifetime, high-reliability missions.	Same as QMLV but additional lot testing and screening for TID (Radiation Assured).

¹ SHP is a TI quality level that does not have a SMD part number

Important Notice: The products and services of Texas Instruments Incorporated and its subsidiaries described herein are sold subject to TI's standard terms and conditions of sale. Customers are advised to obtain the most current and complete information about TI products and services before placing orders. TI assumes no liability for applications assistance, customer's applications or product designs, software performance, or infringement of patents. The publication of information regarding any other company's products or services does not constitute TI's approval, warranty or endorsement thereof.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
