A-1. Troubleshooting .................................................................................... 21
The TSW12D1620 evaluation module (EVM) is used to evaluate the ADC12D1620QML-SP analog-to-digital converter (ADC) from Texas Instruments. Throughout this document, the terms evaluation board, evaluation module, and EVM are synonymous with the TSW12D1620EVM-CVAL.

The ADC12D1620QML-SP is a dual-channel, 12-bit ADC, capable of operating at sampling rates up to 1.6 Giga-samples per second (GSPS) in dual-channel mode, or 3.2 GSPS in single-channel mode. The TSW12D1620EVM-CVAL device output data are transmitted over a high-speed low-voltage differential signaling (LVDS) interface. This evaluation board also includes the following important features:

- An LMH5401-SP high-performance differential amplifier for the single-ended to differential gain block
- Optional differential input network supporting signals from DC to >3 GHz (requires minor component changes)
- Transformer-coupled clock input network to test the ADC performance with an external low-noise clock source
- High-reliability voltage regulation solution
- A TMP461-SP local and remote diode temperature sensor
- Device register programming through the universal serial bus (USB) connector and an FTDI™ USB-to-serial bus translator
• High-speed LVDS data output via an FMC™ interface connector

The digital data from the TSW12D1620EVM-CVAL board is quickly and easily captured with the TSW14DL3200EVM data capture board and the included FMC-TSW14DL3200EVM adapter.

The TSW14DL3200EVM captures the LVDS data, stores the data in memory, and then uploads the data to a connected PC through a USB interface for analysis. The high-speed data converter pro (HSDC Pro) software on the PC communicates with the hardware and processes the data.

Throughout this document, the TSW12D1620EVM-CVAL is referred to as the EVM and the ADC12D1620QML-SP device is referred to as the ADC device.

Chapter 1

Equipment

This section describes the equipment needed to evaluate the full performance of the ADC device.

1.1 Evaluation Board Feature Identification Summary

Figure 1-1 shows the EVM features.

Figure 1-1. EVM Feature Locations
1.2 Required Equipment

The following equipment are included in the EVM evaluation kit:
- Evaluation board (EVM)
- Mini-USB cable
- Power cable
- FMC-TSW14DL3200EVM adapter board

The following equipment is not included in the EVM evaluation kit, but is required for evaluation of this product:
- TSW12D1620EVM-CVAL GUI software
- TSW14DL3200EVM data capture board and related items
- HSDC Pro software
- Computer (PC) running the Windows® operating system (XP, 7, 8, or 10)
- One low-noise signal generator for the analog input; TI recommends the following generators:
  - Keysight™ E8663D
  - Rohde & Schwarz® SMA100A or SMA100B
- Band-pass filter for the analog input signal (750 MHz or desired frequency); the following filters are recommended:
  - Band-pass filter (BPF):
    - Greater than or equal to 60-dB harmonic attenuation
    - Less than or equal to 5% bandwidth
    - Greater than 6-dBm power
    - Less than 5-dB insertion loss
  - Trilithic™ 5VH-series tunable BPF
  - K&L Microwave™ BT-series tunable BPF
  - TTE KC6 or KC7-series fixed BPF
- Signal-path cables, SMA, or BNC (or both SMA and BNC)

By default, the TSW12D1620EVM-CVAL uses an external clock source. Future versions of the board may support the LMX2615-SP integrated PLL/VCO onboard clock source. The following equipment is recommended for the external clock source:
- One low-noise signal generator for the ADC DEVCLK input. TI recommends models similar to the analog input source.
- A band-pass filter for the DEVCLK input. TI recommends a filter similar to the analog input path filter.
Setup Procedure

This section describes how to setup the EVM on the bench with the proper equipment to evaluate the full performance of the ADC device. Figure 2-1 shows the EVM test setup.

Figure 2-1. EVM Test Setup

NOTE: The HSDC Pro software must be installed before connecting the TSW12D1620EVM-CVAL and TSW14DL3200EVM to the PC for the first time.
2.1 Install the High-Speed Data Converter (HSDC) Pro Software

Download the most recent version of the HSDC Pro software from www.ti.com/tool/dataconverterpro-sw. Follow the installation instructions to install the software.

2.2 Install the TSW12D1620EVM-CVAL GUI Software

1. Download the TSW12D1620EVM-CVAL graphical user interface (GUI) software from the EVM tool folder at www.ti.com/tool/TSW12D1620EVM-CVAL.
2. Extract the files from the compressed zip file.
3. Run the executable file (setup.exe), and follow the instructions.

2.3 Connect the EVM and TSW14DL3200EVM via the FMC-TSW14DL3200EVM Adapter Card

With the power off, connect the TSW12D1620EVM-CVAL to the TSW14DL3200EVM through the FMC-TSW14DL3200EVM adapter card as illustrated in Figure 2-1. Make sure that the standoffs provide the proper height for robust connector connections.

2.4 Connect the Power Supplies to the Boards (Power Off)

1. Confirm that the power switch on the TSW14DL3200EVM is in the off position. Connect the power cable to a 12-V DC (minimum 3 A) power supply. Verify the proper supply polarity by confirming that the outer surface of the barrel connector is GND and the inner portion of the connector is 12 V. Connect the power cable to the EVM power connector.
2. Confirm that the power switch on the TSW12D1620EVM-CVAL is on the off position. Connect the power cable to a 5-V DC (minimum 3 A) power supply for the TSW12D1620EVM-CVAL. If using an adjustable or lab DC power supply, adjust the voltage setting to 5.3 V. Verify the proper supply polarity by confirming that the outer surface of the barrel connector is GND and the inner portion of the connector is a positive voltage. Connect the power cable to the EVM power connector.

**CAUTION**

Make sure that the power connections to the EVMs are the correct polarity. Failure to do so can result in immediate damage.

Make sure that the 12-V power supply is connected to the TSW14DL3200EVM and not the TSW12D1620EVM-CVAL. Providing the TSW12D1620EVM-CVAL with 12 V of power can result in immediate damage.

Leave the TSW12D1620EVM-CVAL and TSW14DL3200EVM power switches in the off position until directed later.

2.5 Connect the Clock Signal Generator to the EVM (RF Output Disabled Until Further Directed)

Connect a signal generator to the DEVCLK input of the EVM through a band-pass filter. This signal generator must be a low-noise signal generator. In addition, TI recommends a Trilithic-tunable band-pass filter to minimize harmonics and noise coming from the generator. Configure the signal generator for the desired clock frequency in the range of 0.2 GHz to 1.6 GHz. For best performance when using an RF signal generator, the power input to the CLK SMA connector must be 9 dBm (2.2 Vpp into 50 Ω). The signal generator must increase above 9 dB by an amount equal to any additional attenuation in the clock signal path, such as the insertion loss of the band-pass filter and cables. For example, if the filter insertion loss is 2 dB, the signal generator must be set to 9 dBm + 2 dB = 11 dBm.
2.6 Connect the Signal Generators to the EVM (RF Outputs Disabled Until Further Directed)

Connect a signal generator to the VIN input of the TSW12D1620EVM-CVAL through a band-pass filter and attenuator at the SMA connector. This generator must be a low-noise signal type. TI recommends a Trilithic-tunable band-pass filter to filter the signal from the generator. Configure the signal generator for 147.77 MHz, –10 dBm.

2.7 Turn On the TSW14DL3200EVM Power and Connect to the PC

1. Turn on the 12-V power supply connected to the TSW14DL3200EVM.
2. Turn on the power switch on the TSW14DL3200EVM.
3. Connect a mini-USB 3.0 cable from the PC to the TSW14DL3200EVM.
4. If the TSW14DL3200EVM has not previously been connected to the PC, follow the on-screen instructions to automatically install the device drivers. See the TSW14DL3200EVM user's guide for specific instructions.

2.8 Turn On the TSW12D1620EVM-CVAL 5-V Power Supply and Connect to the PC

1. Turn on the 5-V power supply to power up the EVM.
2. Turn on the power switch on the TSW12D1620EVM-CVAL.
3. Connect the EVM to the PC with the mini-USB cable.

2.9 Turn On the Clock Signal Generator RF Output

Turn on the RF signal output of the signal generator connected to the DEVCLK input.

2.10 Turn On the Signal Generator RF Outputs

Turn on the RF signal output of the signal generator connected to VIN.
2.11 Open the TSW12D1620EVM-CVAL GUI and Program the ADC and Clocks

The device configuration GUI is installed separately from the HSDC Pro installation and is a stand-alone GUI.

Figure 2-2 shows the GUI open window to the EVM tab. Tabs at the top of the panel organize the configuration into device and EVM features, with user-friendly controls and a low-level tab for directly configuring the registers. The EVM has one configurable device: that along with the TMP461-SP is used for temperature monitoring of the EVM and ADC. The register map for these devices is provided in the device data sheets.

1. Open the TSW12D1620EVM-CVAL GUI.
2. Select the external clock as the clock source.
3. Select Fclk = 1600 MHz as the external Fclk selection.
4. Select nonDES operating mode.
5. Click Program Clocks and ADC. This action overwrites any previous device register settings.
2.12 Calibrate the ADC Device on the EVM

Figure 2-3 shows the GUI open window to the Control tab.

1. With the EVM GUI open on the PC, navigate to the Control tab.
2. To calibrate the ADC, click the CAL bit button one time, and then click the button again. This action triggers a new on-command calibration.

NOTE: The CAL bit button executes a calibration sequence that is required for full performance. This calibration is performed automatically during the previous step provided in Section 2.11, but must be performed again any time the sampling rate changes, after significant temperature change of the ADC, or after exiting the power-down mode. See the ADC12D1620QML-SP device data sheet for details regarding the necessary calibration sequence.
2.13 Open the HSDC Software and Load the FPGA Image to the TSW14DL3200EVM

1. Open the HSDC Pro software.
2. Click OK to confirm the serial number of the TSW14DL3200EVM device. If multiple TSWxxxx boards are connected, select the model and serial number for the one connected to the TSW12D1620EVM-CVAL.
3. Using the green pulldown, select ADC12D1620_NonLSPSM_Demux_nonDES_DCLK90_DDR.
4. When prompted, click Yes to update the firmware.
5. If the load firmware prompt does not appear, select Instrument Options>Download Firmware and choose TSW14DL3200_FIRMWARE_COMPONENT_MODE_800M.bin.

NOTE: If the user configures the EVM with options other than the default register values, different instructions may be required for selecting the device in HSDC Pro.

6. Enter the ADC output data rate \( f_{\text{SAMPLE}} \) as 1600M or the desired output sample rate. This number must be equal to the actual sampling rate of the device, and must be updated if the sampling rate changes.
7. Proceed to capture data; see Section 2.14.
2.14 Capture Data Using the HSDC Pro Software

Figure 2-4 shows the HSDC Pro GUI. The following steps show how to capture data using the HSDC Pro software:

1. Select the test to perform.
2. Select the data view.
3. Select the channel to view.
4. Click the Capture button to capture new data.

Additional tips:

• Use the Notch Frequency Bins from the Test Options file menu to remove bins around DC (eliminate DC noise and offset) or the fundamental (eliminate phase noise from signal generators).

• Open the Capture Option dialog from the Data Capture Options file menu to change the capture depth or to enable continuous capture or FFT averaging.

• For analyzing only a portion of the spectrum, use the Single Tone test with the Bandwidth Integration Markers from the Test Options file menu. The Channel Power test is also useful.

• For analyzing only a subset of the captured data, set the Analysis Window (samples) setting to a value less than the number of total samples captured and move the green or red markers in the small transient data window at the top of the screen to select the data subset of interest.

Figure 2-4. HSDC Pro GUI
The ADC device is programmable through the serial programming interface (SPI) bus accessible through the FTDI USB-to-SPI converter located on the EVM. A GUI is provided to write instructions on the bus and program the registers of the ADC device.

For more information about the registers in the ADC device, see the ADC12D1620QML-SP data sheet.

3.1 Tab Organization

Control of the ADC device features are available in the EVM, Temperature Control, Input/Sampling/LVDS, and LMX2615 (may be enabled in future versions of the EVM and GUI) configuration tabs.

3.1.1 EVM (Quick Start) Tab

The EVM tab (Figure 3-1) is used to simplify initial configuration of the EVM. When the desired settings are chosen, clicking the Program Clocks and ADC button configures the EVM for use.

Figure 3-1. Configuration GUI: EVM Tab
Configure the EVM settings as needed using the selection buttons and entry fields, then click the **Program Clocks and ADC** button.

- **#1** Select external clocking (future revisions of the EVM may support on-board clock generation, but that option is not currently available)
- **#2a** For future use: Select the on-board clock frequency to be generated
- **#2b** Enter the applied external clock frequency
- **#3** Set the ADC sampling mode

A history of configuration writes and reads is available by doing the following:

1. Wait until *Idle* is displayed in the lower left corner of the GUI
2. Double click on *Idle* to launch the **Status Log** panel
3. Right-clicking within the **Status Log** panel shows the available commands. A command sequence can be saved for later usage or study by selecting the desired commands, and then right clicking and choosing **Save Selected**. **Figure 3-2** shows the status log panel.

![Status Log](image)

**Figure 3-2. Configuration GUI: Status Log Panel**
3.1.2 Temperature Tab

The Temperature tab (Figure 3-3) enables readout of the different on-board temperature sensors. Depending on the EVM configuration either or both of the TMP461 and MSP430 temperature readout methods is available.

![Configuration GUI: Temperature Tab](image)

Figure 3-3. Configuration GUI: Temperature Tab

Click on one of the buttons to read temperatures.

- **Read Temperature from TMP461**: This method accesses the TMP461 using the FTDI USB to I²C interface.
- **Read Temperature from MSP430**: If enabled in hardware or firmware, this method uses the MSP430 to read the TMP461 using I²C and the LMT01 devices using the pulse count interface.
3.1.3 Control Tab

The Control tab (Figure 3-4) adjusts the ADC configuration to use a number of different serial interface registers.

![Figure 3-4. Configuration GUI: Control Tab](image)

See the ADC12D1620QML-SP data sheet for information on the specific registers used. The following list summarizes the registers used.

- Power Down: configuration register 1
- Calibration: configuration register 1, calibration adjust
- Gain and Offset: I/Q-channel offset adjust, I/Q-channel full-scale range adjust
- DES Timing Adjust: DES timing adjust
- Aperture Delay Adjust: aperture delay coarse adjust, aperture delay fine adjust
- AutoSync/DCLK Reset: AutoSync
### 3.1.4 Input Sampling / LVDS Tab

Figure 3-5 shows the Input Sampling / LVDS tab.

![Figure 3-5. Configuration GUI: Input Sampling / LVDS Tab](image)

See the ADC12D1620QML-SP data sheet for information on the specific registers used. The following list summarizes the registers used.

- **Sampling Mode Settings**: configuration register 1, AutoSync
- **LVDS Interface Control**: configuration register 1
3.1.5 Low Level View Tab

The Low Level View tab (Figure 3-6) allows configuration of the devices at the bit-field level. At any time, the controls in Table 3-1 can be used to configure or read from the device.

![Configuration GUI: Low-Level View Tab](image)

**Figure 3-6. Configuration GUI: Low-Level View Tab**

**Table 3-1. Low-Level Controls**

## Troubleshooting the TSW12D1620EVM-CVAL

Table A-1 lists some troubleshooting procedures.

<table>
<thead>
<tr>
<th>Issue</th>
<th>Troubleshoot</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General problems</strong></td>
<td>• Verify the test setup illustrated in Figure 2-1, and repeat the setup procedure as described in this document.</td>
</tr>
<tr>
<td></td>
<td>• Check the power supply to the EVM and TSW14DL3200EVM. Verify that the power switch is in the on position.</td>
</tr>
<tr>
<td></td>
<td>• Check the signal and clock connections to the EVM.</td>
</tr>
<tr>
<td></td>
<td>• Visually check the top and bottom sides of the board to verify that nothing looks discolored or damaged.</td>
</tr>
<tr>
<td></td>
<td>• Make sure the board-to-board FMC connection is secure.</td>
</tr>
<tr>
<td></td>
<td>• After changing the ADC configuration, click Instrument Options → Download Firmware and download TSW14DL3200_FIRMWARE_COMPONENT_MODE_800M.bin.</td>
</tr>
<tr>
<td></td>
<td>• Power cycle the external power supply to the EVM, and reprogram the LMK and ADC devices.</td>
</tr>
<tr>
<td><strong>TSW14DL3200EVM LEDs are not correct</strong></td>

STANDARD TERMS FOR EVALUATION MODULES

1. **Delivery:** TI delivers TI evaluation boards, kits, or modules, including any accompanying demonstration software, components, and/or documentation which may be provided together or separately (collectively, an “EVM” or “EVMs”) to the User (“User”) in accordance with the terms set forth herein. User's acceptance of the EVM is expressly subject to the following terms.

   1.1 EVMs are intended solely for product or software developers for use in a research and development setting to facilitate feasibility evaluation, experimentation, or scientific analysis of TI semiconductors products. EVMs have no direct function and are not finished products. EVMs shall not be directly or indirectly assembled as a part or subassembly in any finished product. For clarification, any software or software tools provided with the EVM (“Software”) shall not be subject to the terms and conditions set forth herein but rather shall be subject to the applicable terms that accompany such Software.

   1.2 EVMs are not intended for consumer or household use. EVMs may not be sold, sublicensed, leased, rented, loaned, assigned, or otherwise distributed for commercial purposes by Users, in whole or in part, or used in any finished product or production system.

2. **Limited Warranty and Related Remedies/Disclaimers:**

   2.1 These terms do not apply to Software. The warranty, if any, for Software is covered in the applicable Software License Agreement.

   2.2 TI warrants that the TI EVM will conform to TI's published specifications for ninety (90) days after the date TI delivers such EVM to User. Notwithstanding the foregoing, TI shall not be liable for a nonconforming EVM if (a) the nonconformity was caused by neglect, misuse or mistreatment by an entity other than TI, including improper installation or testing, or for any EVMs that have been altered or modified in any way by an entity other than TI, (b) the nonconformity resulted from User's design, specifications or instructions for such EVMs or improper system design, or (c) User has not paid on time. Testing and other quality control techniques are used to the extent TI deems necessary. TI does not test all parameters of each EVM. User's claims against TI under this Section 2 are void if User fails to notify TI of any apparent defects in the EVMs within ten (10) business days after delivery, or of any hidden defects with ten (10) business days after the defect has been detected.

   2.3 TI's sole liability shall be at its option to repair or replace EVMs that fail to conform to the warranty set forth above, or credit User's account for such EVM. TI's liability under this warranty shall be limited to EVMs that are returned during the warranty period to the address designated by TI and that are determined by TI not to conform to such warranty. If TI elects to repair or replace such EVM, TI shall have a reasonable time to repair such EVM or provide replacements. Repaired EVMs shall be warranted for the remainder of the original warranty period. Replaced EVMs shall be warranted for a new full ninety (90) day warranty period.

---

**WARNING**

Evaluation Kits are intended solely for use by technically qualified, professional electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems, and subsystems.

User shall operate the Evaluation Kit within TI's recommended guidelines and any applicable legal or environmental requirements as well as reasonable and customary safeguards. Failure to set up and/or operate the Evaluation Kit within TI's recommended guidelines may result in personal injury or death or property damage. Proper set up entails following TI's instructions for electrical ratings of interface circuits such as input, output and electrical loads.

**NOTE:**

EXPOSURE TO ELECTROSTATIC DISCHARGE (ESD) MAY CAUSE DEGREDATION OR FAILURE OF THE EVALUATION KIT; TI RECOMMENDS STORAGE OF THE EVALUATION KIT IN A PROTECTIVE ESD BAG.
Regulatory Notices:

3.1 United States

3.1.1 Notice applicable to EVMs not FCC-Approved:

**FCC NOTICE:** This kit is designed to allow product developers to evaluate electronic components, circuitry, or software associated with the kit to determine whether to incorporate such items in a finished product and software developers to write software applications for use with the end product. This kit is not a finished product and when assembled may not be resold or otherwise marketed unless all required FCC equipment authorizations are first obtained. Operation is subject to the condition that this product not cause harmful interference to licensed radio stations and that this product accept harmful interference. Unless the assembled kit is designed to operate under part 15, part 18 or part 95 of this chapter, the operator of the kit must operate under the authority of an FCC license holder or must secure an experimental authorization under part 5 of this chapter.

3.1.2 For EVMs annotated as FCC – FEDERAL COMMUNICATIONS COMMISSION Part 15 Compliant:

**CAUTION**

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**FCC Interference Statement for Class A EVM devices**

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**FCC Interference Statement for Class B EVM devices**

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

3.2 Canada

3.2.1 For EVMs issued with an Industry Canada Certificate of Conformance to RSS-210 or RSS-247

**Concerning EVMs Including Radio Transmitters:**

This device complies with Industry Canada license-exempt RSSs. Operation is subject to the following two conditions:

(1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

**Concernant les EVMs avec appareils radio:**

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L’exploitation est autorisée aux deux conditions suivantes: (1) l’appareil ne doit pas produire de brouillage, et (2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

**Concerning EVMs Including Detachable Antennas:**

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication. This radio transmitter has been approved by Industry Canada to operate with the antenna types listed in the user guide with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.
Concernant les EVMs avec antennes détachables

Conformément à la réglementation d’Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d’un type et d’un gain maximal (ou inférieur) approuvé par l’émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l’intention des autres utilisateurs, il faut choisir le type d’antenne et son gain de sorte que la puissance isotope rayonnée équivalente (p.i.r.e.) ne dépasse pas l’intensité nécessaire à l’établissement d’une communication satisfaisante. Le présent émetteur radio a été approuvé par Industrie Canada pour fonctionner avec les types d’antenne énumérés dans le manuel d’usage et ayant un gain admissible maximal et l’impédance requise pour chaque type d’antenne. Les types d’antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l’exploitation de l’émetteur.

3.3 Japan

3.3.1 Notice for EVMs delivered in Japan: Please see http://www.tij.co.jp/lstds/ti_ja/general/eStore/notice_01.page 日本国内に輸入される評価用キット、ボードについては、次のところをご覧ください。
http://www.tij.co.jp/lstds/ti_ja/general/eStore/notice_01.page

3.3.2 Notice for Users of EVMs Considered “Radio Frequency Products” in Japan: EVMs entering Japan may not be certified by TI as conforming to Technical Regulations of Radio Law of Japan.

If User uses EVMs in Japan, not certified to Technical Regulations of Radio Law of Japan, User is required to follow the instructions set forth by Radio Law of Japan, which includes, but is not limited to, the instructions below with respect to EVMs (which for the avoidance of doubt are stated strictly for convenience and should be verified by User):

1. Use EVMs in a shielded room or any other test facility as defined in the notification #173 issued by Ministry of Internal Affairs and Communications on March 28, 2006, based on Sub-section 1.1 of Article 6 of the Ministry’s Rule for Enforcement of Radio Law of Japan,
2. Use EVMs only after User obtains the license of Test Radio Station as provided in Radio Law of Japan with respect to EVMs, or
3. Use of EVMs only after User obtains the Technical Regulations Conformity Certification as provided in Radio Law of Japan with respect to EVMs. Also, do not transfer EVMs, unless User gives the same notice above to the transferee. Please note that if User does not follow the instructions above, User will be subject to penalties of Radio Law of Japan.

3.4 European Union

3.4.1 For EVMs subject to EU Directive 2014/30/EU (Electromagnetic Compatibility Directive):

This is a class A product intended for use in environments other than domestic environments that are connected to a low-voltage power-supply network that supplies buildings used for domestic purposes. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.
4. EVM Use Restrictions and Warnings:

4.1. EVMS ARE NOT FOR USE IN FUNCTIONAL SAFETY AND/OR SAFETY CRITICAL EVALUATIONS, INCLUDING BUT NOT LIMITED TO EVALUATIONS OF LIFE SUPPORT APPLICATIONS.

4.2. User must read and apply the user guide and other available documentation provided by TI regarding the EVM prior to handling or using the EVM, including without limitation any warning or restriction notices. The notices contain important safety information related to, for example, temperatures and voltages.

4.3. Safety-Related Warnings and Restrictions:

4.3.1. User shall operate the EVM within TI's recommended specifications and environmental considerations stated in the user guide, other available documentation provided by TI, and any other applicable requirements and employ reasonable and customary safeguards. Exceeding the specified performance ratings and specifications (including but not limited to input and output voltage, current, power, and environmental ranges) for the EVM may cause personal injury or death, or property damage. If there are questions concerning performance ratings and specifications, User should contact a TI field representative prior to connecting interface electronics including input power and intended loads. Any loads applied outside of the specified output range may also result in unintended and/or inaccurate operation and/or possible permanent damage to the EVM and/or interface electronics. Please consult the EVM user guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative. During normal operation, even with the inputs and outputs kept within the specified allowable ranges, some circuit components may have elevated case temperatures. These components include but are not limited to linear regulators, switching transistors, pass transistors, current sense resistors, and heat sinks, which can be identified using the information in the associated documentation. When working with the EVM, please be aware that the EVM may become very warm.

4.3.2. EVMs are intended solely for use by technically qualified, professional electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems, and subsystems. User assumes all responsibility and liability for proper and safe handling and use of the EVM by User or its employees, affiliates, contractors or designees. User assumes all responsibility and liability to ensure that any interfaces (electronic and/or mechanical) between the EVM and any human body are designed with suitable isolation and means to safely limit accessible leakage currents to minimize the risk of electrical shock hazard. User assumes all responsibility and liability for any improper or unsafe handling or use of the EVM by User or its employees, affiliates, contractors or designees.

4.4. User assumes all responsibility and liability to determine whether the EVM is subject to any applicable international, federal, state, or local laws and regulations related to User's handling and use of the EVM and, if applicable, User assumes all responsibility and liability for compliance in all respects with such laws and regulations. User assumes all responsibility and liability for proper disposal and recycling of the EVM consistent with all applicable international, federal, state, and local requirements.

5. Accuracy of Information: To the extent TI provides information on the availability and function of EVMs, TI attempts to be as accurate as possible. However, TI does not warrant the accuracy of EVM descriptions, EVM availability or other information on its websites as accurate, complete, reliable, current, or error-free.

6. Disclaimers:

6.1. EXCEPT AS SET FORTH ABOVE, EVMS AND ANY MATERIALS PROVIDED WITH THE EVM (INCLUDING, BUT NOT LIMITED TO, REFERENCE DESIGNS AND THE DESIGN OF THE EVM ITSELF) ARE PROVIDED “AS IS” AND "WITH ALL FAULTS." TI DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, REGARDING SUCH ITEMS, INCLUDING BUT NOT LIMITED TO ANY EPIDEMIC FAILURE WARRANTY OR IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER INTELLECTUAL PROPERTY RIGHTS.

6.2. EXCEPT FOR THE LIMITED RIGHT TO USE THE EVM SET FORTH HEREIN, NOTHING IN THESE TERMS SHALL BE CONSTRUED AS GRANTING OR CONFERRING ANY RIGHTS BY LICENSE, PATENT, OR ANY OTHER INDUSTRIAL OR INTELLECTUAL PROPERTY RIGHT OF TI, ITS SUPPLIERS/LICENSORS OR ANY OTHER THIRD PARTY, TO USE THE EVM IN ANY FINISHED END-USER OR READY-TO-USE FINAL PRODUCT, OR FOR ANY INVENTION, DISCOVERY OR IMPROVEMENT, REGARDLESS OF WHEN MADE, CONCEIVED OR ACQUIRED.

7. USER’S INDEMNITY OBLIGATIONS AND REPRESENTATIONS. User will defend, indemnify and hold TI, its licensors and their representatives harmless from and against any and all claims, damages, losses, expenses, costs and liabilities (collectively, “Claims”) arising out of or in connection with any handling or use of the EVM that is not in accordance with these terms. This obligation shall apply regardless of whether claims arise under statute, regulation, or the law of tort, contract or any other legal theory, and even if the EVM fails to perform as described or expected.
8. **Limitations on Damages and Liability:**

8.1 **General Limitations.** IN NO EVENT SHALL TI BE LIABLE FOR ANY SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF THESE TERMS OR THE USE OF THE EVMs, REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. EXCLUDED DAMAGES INCLUDE, BUT ARE NOT LIMITED TO, COST OF REMOVAL OR REINSTALLATION, ANCILLARY COSTS TO THE PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, RETESTING, OUTSIDE COMPUTER TIME, LABOR COSTS, LOSS OF GOODWILL, LOSS OF PROFITS, LOSS OF SAVINGS, LOSS OF USE, LOSS OF DATA, OR BUSINESS INTERRUPTION. NO CLAIM, SUIT OR ACTION SHALL BE BROUGHT AGAINST TI MORE THAN TWELVE (12) MONTHS AFTER THE EVENT THAT GAVE RISE TO THE CAUSE OF ACTION HAS OCCURRED.

8.2 **Specific Limitations.** IN NO EVENT SHALL TI'S AGGREGATE LIABILITY FROM ANY USE OF AN EVM PROVIDED HEREUNDER, INCLUDING FROM ANY WARRANTY, INDEMNITY OR OTHER OBLIGATION ARISING OUT OF OR IN CONNECTION WITH THESE TERMS, EXCEED THE TOTAL AMOUNT PAID TO TI BY USER FOR THE PARTICULAR EVM(S) AT ISSUE DURING THE PRIOR TWELVE (12) MONTHS WITH RESPECT TO WHICH LOSSES OR DAMAGES ARE CLAIMED. THE EXISTENCE OF MORE THAN ONE CLAIM SHALL NOT ENLARGE OR EXTEND THIS LIMIT.

9. **Return Policy.** Except as otherwise provided, TI does not offer any refunds, returns, or exchanges. Furthermore, no return of EVM(s) will be accepted if the package has been opened and no return of the EVM(s) will be accepted if they are damaged or otherwise not in a resalable condition. If User feels it has been incorrectly charged for the EVM(s) it ordered or that delivery violates the applicable order, User should contact TI. All refunds will be made in full within thirty (30) working days from the return of the components(s), excluding any postage or packaging costs.

10. **Governing Law:** These terms and conditions shall be governed by and interpreted in accordance with the laws of the State of Texas, without reference to conflict-of-laws principles. User agrees that non-exclusive jurisdiction for any dispute arising out of or relating to these terms and conditions lies within courts located in the State of Texas and consents to venue in Dallas County, Texas. Notwithstanding the foregoing, any judgment may be enforced in any United States or foreign court, and TI may seek injunctive relief in any United States or foreign court.
