

## ***Stand-off Head Design for DLP® NIRscan™ Nano EVM***

---

### **Introduction**

The DLP® NIRscan™ Nano Evaluation Module (EVM) employs a diffuse reflectance design that requires the sample to be placed in direct contact with the sapphire window. This design was chosen to ensure proper illumination of a sample by the built-in lamps.

Since the release of the DLP NIRscan Nano EVM, many requests have been received for a design that would allow diffuse reflectance measurements without direct contact with the EVM window. Such a design would allow for the measurement of many substances that would otherwise result in residue being left on the window.

The following are examples of such substances:

- Food:
  - Fruits – Grapes, strawberries, apples, and others that can have sugar residues on the surface
  - Dairy products – Ice cream, yogurt, cheeses, sour cream, and other dairy products
  - Desserts – Applesauce, pudding, and pastries
- Industrial fluids and lubricants
- Soil and fertilizers
- Cosmetics
- Pharmaceuticals

Larger sampling area is another advantage of a stand-off design, particularly for items such as grain or other substances with short range inhomogeneity. A larger area will integrate these differences allowing measurement in an environment where it is not feasible or desirable to place the samples in direct contact with the window.

TI has designed a prototype of a simple telescopic stand-off head which was tested to determine the usability and characteristics of the design.

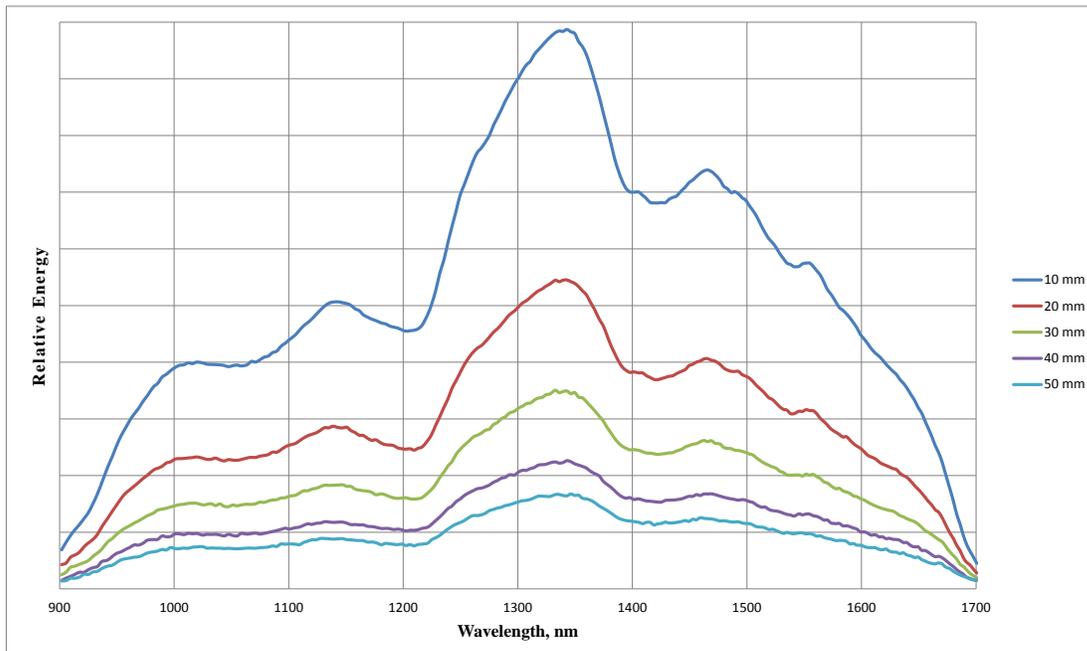

## Results

Figure 1 shows the absorbance spectra of Comté cheese taken at two distances, and demonstrates the similarity of the spectra.

**Figure 1 – Comté Cheese Absorbance at 10 mm and 15 mm**

Figure 2 shows the raw detector readings of Spectralon™ at 10 mm – 50 mm and demonstrates the consistency of the data shape. The readings only differ by a scaling factor from one another.

**Figure 2 – Reflected Energy of Spectralon Surface at 10 – 50 mm**

## Considerations

The primary considerations for a stand-off head are signal-to-noise ratio (SNR), and illumination intensity.

### SNR

Figure 3 shows the relative SNR values from data taken at 10 – 50 mm with the illumination intensity fixed. For a given illumination scheme, the maximum working distance will be determined by the required SNR for the system. The SNR falls off as an exponential of the form  $SNR = k \cdot e^{-c \cdot x}$ , where  $k$  and  $c$  are constants. The best fit exponential curve is shown in red.

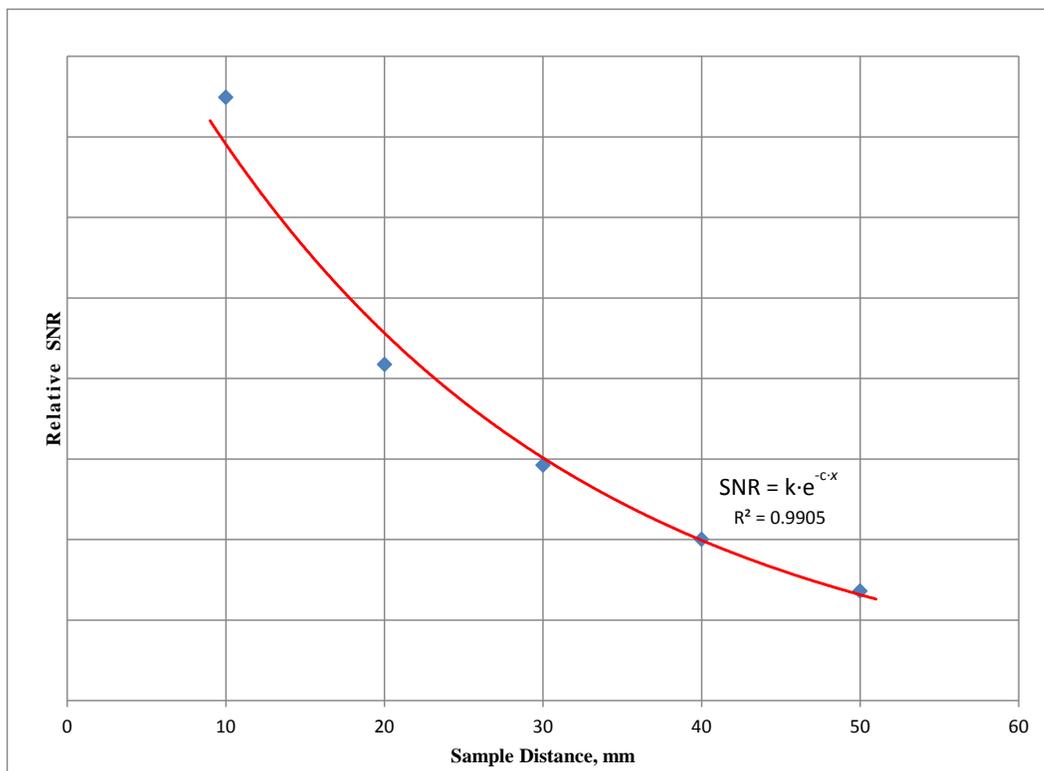

Figure 3 – Relative SNR at 10 – 50 mm [ 9V illumination, 22 sec (99 scans) ]

### Illumination Intensity

If the illumination level does not achieve the desired working distance for the required SNR of the system, then the illumination can be increased. The trade-off is power consumption.

The on board lamp driver is based on the TI OPA567 power amplifier. In this system the supply is 5V and is designed to limit the current to 280 mA in order remain within the USB 2.0 power draw specifications. If more power than this is needed the circuit can be designed to put out up to 1 A, but a separate 5V supply will be needed. See § 3.1 of the Application Report [Signal Chain Performance Optimizations in the TI DLP® Technology-Based Spectrometer](#) for further information.

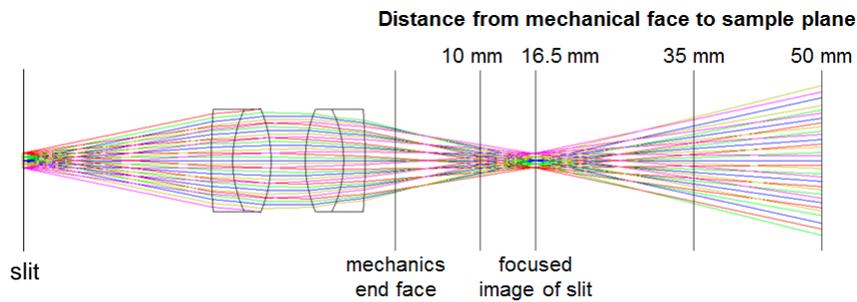

NOTE: If more intensity is desired than can be supplied by the on board lamp driver, then a separate lamp supply should be employed.

## Design

The design includes CAD files for the head, and can be printed with a 3D printer and populated with the lenses specified in the design.

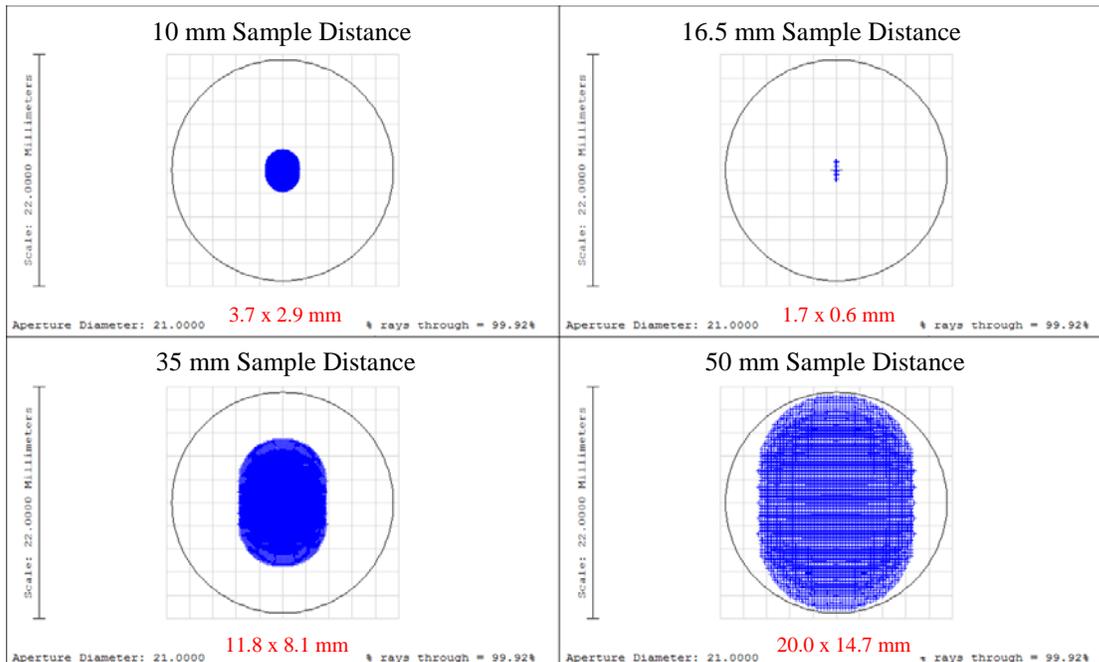

The design also includes a simple Zemax model showing the area that will be captured by the slit at the distance chosen. This model can be modified if different lenses are chosen or if a larger working distance is needed

Figure 4 shows the Zemax model layout of the module. Notice in this arrangement that the slit is imaged at 16.5 mm from the front of the end face of the mechanics. The area seen by the slit here is only 1.7 x 0.6 mm. If you intend to work at this distance and need a larger sample area, the separation between the lens sets will need to be increased or decreased to provide more defocus at this distance.

**Figure 4 - Zemax Stand-off Module Layout [10, 16.5, 35 & 50 mm]**

Figure 5 shows the shape of the sampling area (area seen by the slit) at these distances.

## IMPORTANT NOTICE FOR TI DESIGN INFORMATION AND RESOURCES

Texas Instruments Incorporated ("TI") technical, application or other design advice, services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using any particular TI Resource in any way, you (individually or, if you are acting on behalf of a company, your company) agree to use it solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources.

You understand and agree that you remain responsible for using your independent analysis, evaluation and judgment in designing your applications and that you have full and exclusive responsibility to assure the safety of your applications and compliance of your applications (and of all TI products used in or for your applications) with all applicable regulations, laws and other applicable requirements. You represent that, with respect to your applications, you have all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. You agree that prior to using or distributing any applications that include TI products, you will thoroughly test such applications and the functionality of such TI products as used in such applications. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

You are authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING TI RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY YOU AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You agree to fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of your non-compliance with the terms and provisions of this Notice.

This Notice applies to TI Resources. Additional terms apply to the use and purchase of certain types of materials, TI products and services. These include; without limitation, TI's standard terms for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>), [evaluation modules](#), and [samples](http://www.ti.com/sc/docs/sampterm.htm) (<http://www.ti.com/sc/docs/sampterm.htm>).
