

## Test Steps:

To power MSP430 from FET Tool Connector: Populate J19 and J20

To power MSP430 from Power Stage Board:

1. Connect boards together using via right-angle header.
2. Apply VIN to power stage board (TPS40057 or TPS40170) and this will create Vbias voltage (approx 9.3V).
3. Confirm approximately 9.3V on J7-pin1.
4. Populate J7 and confirm 3.3Vout on linear regulator (J6-pin1 & J12-pin1).
5. Next populate J6 & J12 header to provide MSP430 3.3V power.

D2 LED should be on.

## Operation:

Program MSP430 via J17 FET Tool Interface with provided C-code download.

Discharge Resistors allows calibration mode8 which discharges a battery to empty before charging.

MSP430 will communicate via SMBus to Battery Gas Gauge for desired charging voltage

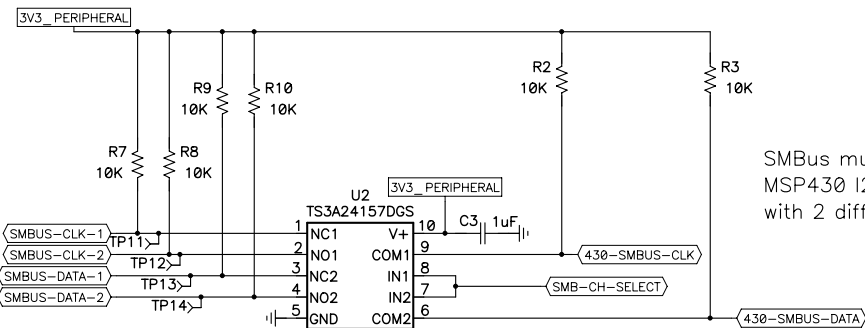

and charging current. After a valid read, the MSP430 sets a PWM for voltage and current regulation.

A battery needs to be communicated with before PWMs will start.

See Application Note for more detailed information.

## Changes from Rev D to E:

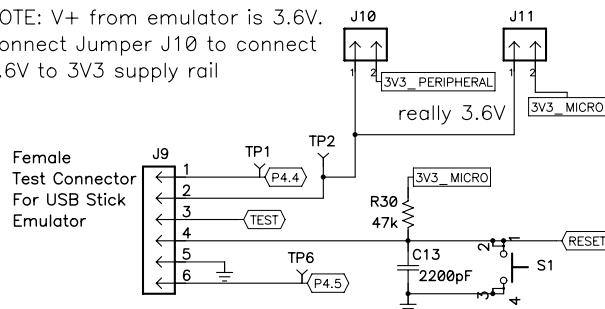

1. added TPS71533 LDO to separate 3.3V analog and digital
2. changed J10/J11 and J19/J20 for peripheral and micro 3.3V
3. added connection from VUSB (pin 54) to 3.3V Micro
4. connected J9-pin4 reset to 3V3\_MICRO

SMBus multiplexer to expand MSP430 I2C port to communicate with 2 different batteries.

NOTE: V+ from emulator is 3.6V. Connect Jumper J10 to connect 3.6V to 3V3 supply rail

## Status LEDs

approx 2.2mA per LED

VBIAS input = 10V (24Vabs max)

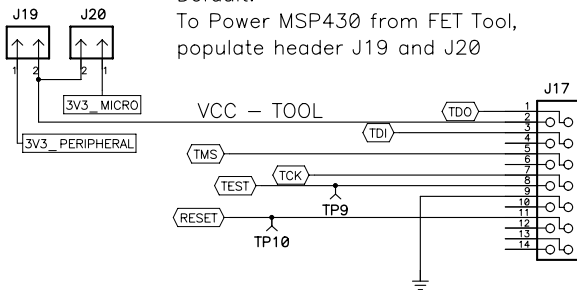

## Discharge Resistors for Battery Packs

Designed to control Wide Input Voltage Battery Charger For use with PMP5306 - dual 40Vin TPS40057 dc/dc controller or for use with PMP5313 - dual 60Vin TPS40170 dc/dc controller

Default:  
To Power MSP430 from FET Tool,  
populate header J19 and J20

## MSP-FET430UIF USB Debug Interface Connection

4kHz PWM output for Charger Voltage regulation.

Vout | Duty Cycle | Average Voltage

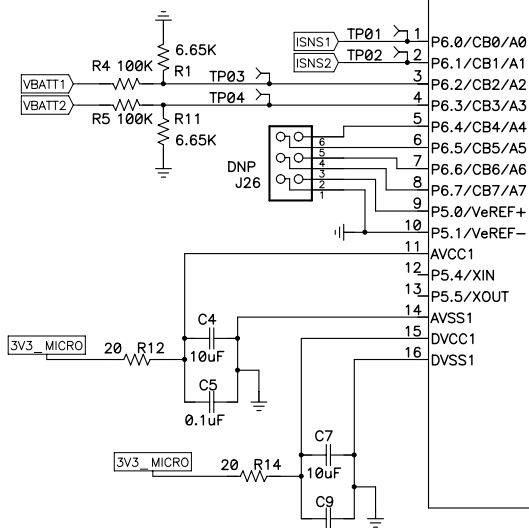

0V	0%	0.0
5.5V	10.78	0.335V
12.6V	24.71	0.791V
16.8V	32.94	1.054V
51V	100.0%	3.2V

4kHz PWM output for Charger Current regulation.

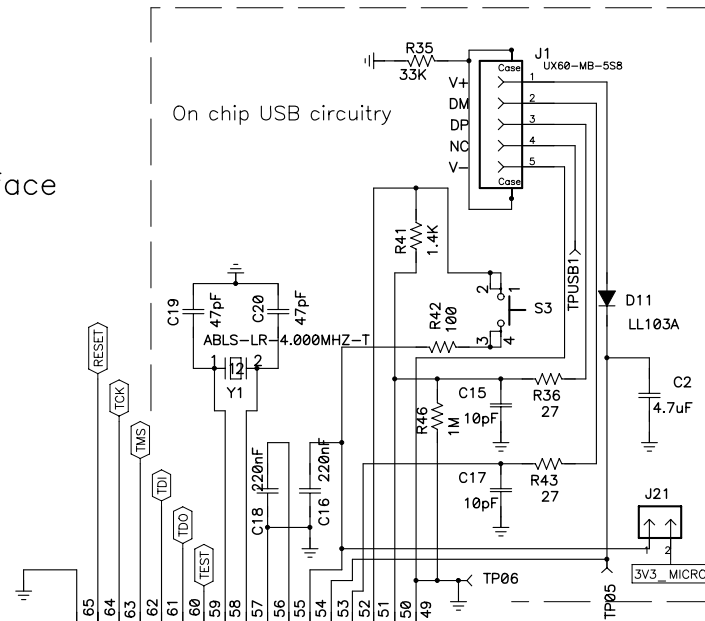

Iout | Duty Cycle | Average Voltage

0 A	0 %	0 V
0.1A	1.0%	0.032V
1.0A	10.0	0.32V
2.0A	20.0	0.64V
5.0A	50.0	1.60V
10.0A	100.0	3.20V

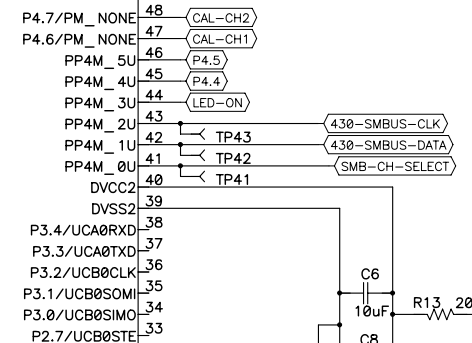

Vbatt = Resistor Divider  
51V --> 3.200V  
5.5V --> 0.335V
