

CD54AC161, CD74AC161

SCHS239D - NOVEMBER 1998 - REVISED MAY 2024

# CDx4AC161 4-Bit Synchronous Binary Counters

### 1 Features

- Internal look-ahead for fast counting
- Carry output for n-bit cascading
- Synchronous counting
- Synchronously programmable
- SCR-latchup-resistant CMOS process and circuit
- Exceeds 2kV ESD protection per MIL-STD-883, method 3015

# 2 Description

The 'AC161 devices are 4-bit binary counters. These synchronous, presettable counters feature an internal carry look-ahead for application in high-speed counting.

### **Device Information**

| PART NUMBER | PACKAGE <sup>(1)</sup> | PACKAGE SIZE <sup>(2)</sup> | BODY SIZE(3)    |
|-------------|------------------------|-----------------------------|-----------------|
| CDx4AC161   | E (PDIP, 16)           | 19.3mm x 9.4mm              | 19.3mm x 6.35mm |
| CDX4AC 101  | M (SOIC, 16)           | 9.9mm x 6mm                 | 9.9mm x 3.9mm   |

- (1) For all available packages, see the package option addendum at the end of the data sheet.
- The package size (length × width) is a nominal value and includes pins, where applicable.
- The body size (length × width) is a nominal value and does not include pins.

# 4 Specifications

## 4.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

|                     |                                                   |                                                           | MIN  | MAX  | UNIT |
|---------------------|---------------------------------------------------|-----------------------------------------------------------|------|------|------|
| V <sub>CC</sub>     | Supply voltage                                    |                                                           | -0.5 | 6    | V    |
| I <sub>IK</sub> (2) | Input clamp current                               | (V <sub>I</sub> < 0 or V <sub>I</sub> > V <sub>CC</sub> ) |      | ±20  | mA   |
| I <sub>OK</sub> (2) | Output clamp current                              | $(V_O < 0 \text{ or } V_O > V_{CC})$                      |      | ±50  | mA   |
| Io                  | Continuous output current                         | $(V_O > 0 \text{ V or } V_O < V_{CC})$                    |      | ±50  | mA   |
|                     | Continuous current through V <sub>CC</sub> or GND |                                                           |      | ±100 | mA   |
| T <sub>stg</sub>    | Storage temperature                               |                                                           | -65  | 150  | °C   |

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## 4.2 ESD Ratings

|                   |                         |                                                                   | VALUE | UNIT |
|-------------------|-------------------------|-------------------------------------------------------------------|-------|------|
| V <sub>(ESD</sub> | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup> | ±2000 | V    |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

## 4.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)(1)

|                 |                                    |                                  |                                  | TA = 25 | °C              | –55°C to | 125°C           | –40°C to | 85°C            | UNIT  |   |
|-----------------|------------------------------------|----------------------------------|----------------------------------|---------|-----------------|----------|-----------------|----------|-----------------|-------|---|
|                 |                                    |                                  |                                  | MIN     | MAX             | MIN      | MAX             | MIN      | MAX             | UNIT  |   |
| V <sub>CC</sub> | Supply voltage                     |                                  |                                  | 1.5     | 5.5             | 1.5      | 5.5             | 1.5      | 5.5             | V     |   |
|                 |                                    | V <sub>CC</sub> = 1.5            |                                  | 5       | 1.2             |          | 1.2             |          | 1.2             |       |   |

### **5 Parameter Measurement Information**

- A. CL includes probe and test-fixture capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  1 MHz, ZO = 50  $\Omega$ , tr = 3 ns, tf = 3 ns. Phase relationships between waveforms are arbitrary.
- D. For clock inputs, fmax is measured with the input duty cycle at 50%.
- E. The outputs are measured one at a time with one input transition per measurement.
- F. tPLH and tPHL are the same as tpd.
- G. tPZL and tPZH are the same as ten.
- H. tPLZ and tPHZ are the same as tdis.

# 6 Detailed Description

### 6.1 Overview

The 'AC161 devices are 4-bit binary counters. These synchronous, presettable counters feature an internal carry look-ahead for application in high-speed counting These devices are fully programmable; that is, they can be preset to any number between 0 and 9 or 15. Presetting is synchronous; therefore, setting up a low level at the load input disables the counter and causes the outputs to agree with the setup data after the next clock pulse, regardless of the levels of the enable inputs.

The clear function is asynchronous. A low level at the clear  $(\overline{CLR})$  input sets all four of the flip-flop outputs low, regardless of the levels of the CLK, load  $(\overline{LOAD})$ , or enable inputs.

The carry look-ahead circuitry provides for cascading counters for n-bit synchronous applications without additional gating. Instrumental in accomplishing this function are ENP, ENT, and a ripple-carry output (RCO). Both ENP and ENT must be high to count, and ENT is fed forward to enable RCO. Enabling RCO produces a high-level pulse while the count is maximum (9 or 15, with QA high). This high-level overflow ripple-carry pulse can be used to enable successive cascaded stages. Transitions at ENP or ENT are allowed, regardless of the level of CLK.

The counters feature a fully independent clock circuit. Changes at control inputs (ENP, ENT, or  $\overline{\text{LOAD}}$ ) that modify the operating mode have no effect on the contents of the counter until clocking occurs. The function of the counter (whether enabled, disabled, loading, or counting) is dictated solely by the conditions meeting the stable setup and hold times.

| Н   | <b>↑</b>        | Χ   | Χ   | I    | h           | Н              | Note 1          | Farallel load |
| Н   | 1               | h   | h   | h    | Х           | Count          | Note 1          | Count         |
| Н   | Х               |     | Х   | h    | Х           | q <sub>n</sub> | Note 1          | Inhibit       |
| Н   | Х               | X   | - 1 | h    | Х           | q <sub>n</sub> | L               | ITITIDIC      |

H = high level, L = low level, X = don't care, h = high level one setup time prior to the CLK low-to-high transition, q = the state of the referenced output prior to the CLK low-to-high transition, and  $\uparrow$  = CLK low-to-high transition.

NOTE 1: The RCO output is high when ENT is high and the counter is at terminal count

## 7 Application and Implementation

#### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 7.1 Power Supply Recommendations

The power supply may be any voltage between the minimum and maximum supply voltage rating located in *Section 4.3*.

Each  $V_{CC}$  terminal must have a good bypass capacitor to prevent power disturbance. A 0.1- $\mu$ F capacitor is recommended for devices with a single supply. If there are multiple  $V_{CC}$  terminals, then 0.01- $\mu$ F or 0.022- $\mu$ F capacitors are recommended for each power terminal. It is permissible to parallel multiple bypass capacitors to reject different frequencies of noise. Multiple bypass capacitors may be paralleled to reject different frequencies of noise. The bypass capacitor must be installed as close to the power terminal as possible for the best results.

### 7.2 Layout

### 7.2.1 Layout Guidelines

Inputs must not float when using multiple bit logic devices. In many cases, functions or parts of functions of digital logic devices are unused. Some examples include situations when only two inputs of a triple-input AND gate are used, or when only 3 of the 4-buffer gates are used. Such input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states.

Specified in Layout Diagram are rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, they are tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient.

## 8 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

## 8.1 Documentation Support (Analog)

#### 8.1.1 Related Documentation

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

Table 8-1. Related Links

| PARTS     | PRODUCT<br>FOLDER | SAMPLE & BUY | TECHNICAL DOCUMENTS | TOOLS &<br>SOFTWARE | SUPPORT & COMMUNITY |  |
|-----------|-------------------|--------------|---------------------|---------------------|---------------------|--|
| CD54AC161 | Click here        | Click here   | Click here          | Click here          | Click here          |  |
| CD74AC161 | Click here        | Click here   | Click here          | Click here          | Click here          |  |

### 8.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 8.3 Support Resources

TI E2E<sup>™</sup> support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

#### 8.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

## 8.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 8.6 Glossary

TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

## 9 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

### Changes from Revision C (September 1998) to Revision D (May 2024)

Page

Added Device Information table, Pin Functions table, ESD Ratings table, Thermal Information table, Device
Functional Modes, Application and Implementation section, Device and Documentation Support section, and
Mechanical, Packaging, and Orderable Information section

# 10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

www.ti.com 8-Nov-2025

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

<sup>(4)</sup> Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

# D (R-PDS0-G16)

# PLASTIC SMALL OUTLINE

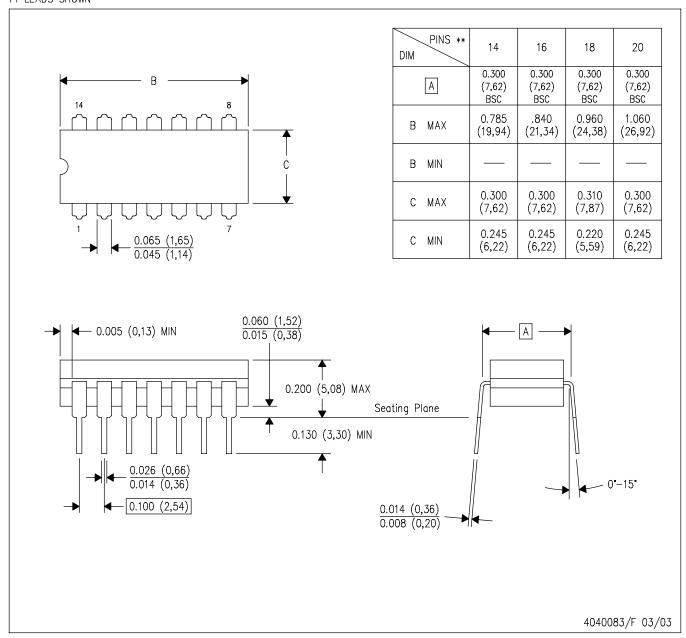

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AC.

### 14 LEADS SHOWN

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. This package is hermetically sealed with a ceramic lid using glass frit.
- D. Index point is provided on cap for terminal identification only on press ceramic glass frit seal only.
- E. Falls within MIL STD 1835 GDIP1-T14, GDIP1-T16, GDIP1-T18 and GDIP1-T20.

# N (R-PDIP-T\*\*)

# PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
- The 20 pin end lead shoulder width is a vendor option, either half or full width.

### IMPORTANT NOTICE AND DISCLAIMER
