

# DRV5021-Q1 Automotive, low-voltage, unipolar, digital-switch hall effect sensor

## 1 Features

- Qualified for automotive applications
- AEC-Q100 qualified with the following results:
  - Device temperature grade 0:  $-40^{\circ}\text{C}$  to  $150^{\circ}\text{C}$  ambient operating temperature range
  - Device HBM ESD classification level 3A
  - Device CDM ESD classification level C6
- Digital unipolar-switch hall sensor
- 2.5-V to 5.5-V operating  $V_{CC}$  range
- Magnetic sensitivity options ( $B_{OP}$ ,  $B_{RP}$ ):
  - DRV5021A1-Q1: 2.9 mT, 1.8 mT
  - DRV5021A2-Q1: 9.2 mT, 7.0 mT
  - DRV5021A3-Q1: 17.9 mT, 14.1 mT
- Fast 30-kHz sensing bandwidth
- Open-drain output capable of 20 mA
- Optimized low-voltage architecture
- Integrated hysteresis to enhance noise immunity
- Standard industry package:
  - Surface-mount SOT-23

## 2 Applications

- Automotive gear shifters, body closure
- Limit switches
- General proximity sensing
- Brushed dc motor feedback
- Door open and close detection
- Valve positioning
- Pulse counting

### Typical Application Schematic

## 3 Description

The DRV5021-Q1 device is a low-voltage, digital-switch, Hall effect sensor for high-speed automotive applications. Operating from a 2.5-V to 5.5-V power supply, the device senses magnetic flux density, and gives a digital output based on predefined magnetic thresholds.

This device senses magnetic fields perpendicular to the face of the package. When the applied magnetic flux density exceeds the magnetic operate point ( $B_{OP}$ ) threshold, the open-drain output of the device drives a low voltage. When the flux density decreases to less than the magnetic release point ( $B_{RP}$ ) threshold, the output goes to high impedance. The hysteresis resulting from the separation of  $B_{OP}$  and  $B_{RP}$  helps prevent output errors caused by input noise. This configuration makes system designs more robust against noise interference.

The device operates consistently across a wide ambient temperature range of  $-40^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$ .

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
DRV5021-Q1	SOT-23 (3)	2.90 mm x 1.30 mm

(1) For all available packages, see the package option addendum at the end of the data sheet.

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

DATE	REVISION	NOTES
February 2019	*	Initial release.

## 5 Pin Configuration and Functions

### Pin Functions

PIN		TYPE	DESCRIPTION
NAME	DBZ		
GND	3	GND	Ground pin
OUT	2	Output	Hall sensor open-drain output. The open drain requires a pullup resistor.
V <sub>CC</sub>	1	Power	2.5-V to 5.5-V power supply. Bypass this pin to the GND pin with a 0.1-μF (minimum) ceramic capacitor rated for V <sub>CC</sub> .

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
Power supply voltage (VCC)	−0.3	6.0	V
Output voltage (OUT)	−0.3	6.0	V
Output current (OUT)		30	mA
Magnetic flux density, B <sub>MAX</sub>		Unlimited	T
Operating junction temperature, T <sub>J</sub>	−40	170	°C
Storage temperature, T <sub>stg</sub>	−65	150	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

over operating free-air temperature range (unless otherwise noted)

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per AEC Q100-002 <sup>(1)</sup>	±6000	V
		Charged device model (CDM), per AEC Q100-011	±1000	

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>CC</sub>	Power supply voltage range	2.5	5.5	V
V <sub>O</sub>	Output pin voltage	0	5.5	V
I <sub>OUT</sub>	Output sinking current	0	20	mA
T <sub>A</sub>	Operating ambient temperature	–40	150	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		DRV5021-Q1	UNIT
		SOT-23 (DBZ)	
		3 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	356	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	128	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	94	°C/W
Y <sub>JT</sub>	Junction-to-top characterization parameter	11.4	°C/W
Y <sub>JB</sub>	Junction-to-board characterization parameter	92	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application report](#).

### 6.5 Electrical Characteristics

at V<sub>CC</sub> = 2.5 V to 5.5 V, over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITION	MIN	TYP	MAX	UNIT
I <sub>CC</sub>	Operating supply current			2.3	2.8	mA
t <sub>ON</sub>	Power-on time			40	70	μs
t <sub>d</sub>	Propagation delay time <sup>(1)</sup>	B = B <sub>RP</sub> – 10 mT to B <sub>OP</sub> + 10 mT in 1 μs		13	25	μs
I <sub>OZ</sub>	High-impedance output leakage current	5.5 V applied to OUT, while OUT is high-impedance			100	nA
V <sub>OL</sub>	Low-level output voltage	I <sub>OUT</sub> = 20 mA		0.15	0.4	V
R <sub>DS(on)</sub>	Output FET resistance	I <sub>OUT</sub> = 5 mA, V <sub>CC</sub> = 3.3 V		8		Ω

(1) See the [Propagation Delay](#) section for more information.

### 6.6 Magnetic Characteristics

at V<sub>CC</sub> = 2.5 V to 5.5 V, over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITION	MIN	TYP	MAX	UNIT
<b>DRV5021A1-Q1, DRV5021A2-Q1, DRV5021A3-Q1</b>						
f <sub>BW</sub>	Sensing bandwidth			30		kHz
<b>DRV5021A1-Q1</b>						
B <sub>OP</sub>	Magnetic threshold Operate Point	T <sub>A</sub> = –40°C to +125°C	1.3	2.9	4.4	mT
		T <sub>A</sub> = –40°C to +150°C	1.1	2.9	4.7	mT

## 7 Detailed Description

### 7.1 Overview

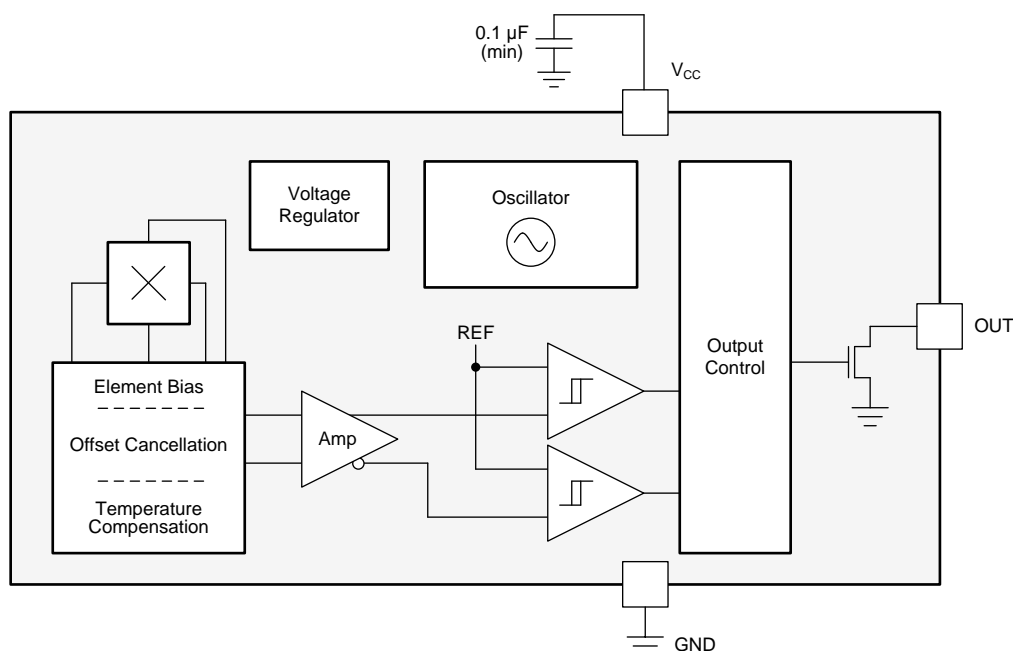

The DRV5021-Q1 device is a spinning-current Hall sensor with a digital output for magnetic-sensing applications. The DRV5021-Q1 can be powered with a supply voltage between 2.5 V and 5.5 V.

The field polarity is defined as follows: a **south pole** near the marked side of the package is a positive magnetic field. A **north pole** near the marked side of the package is a negative magnetic field. The output state depends on the magnetic field perpendicular to the package.

A strong **south pole** near the marked side of the package causes the output to pull low. A weak **south pole**, the absence of a field, or any north pole makes the output high impedance. Hysteresis is included in between the operate point and the release point to prevent toggling near the magnetic threshold.

An external pullup resistor is required on the OUT pin. The OUT pin can be pulled up to  $V_{CC}$ , or to a different voltage supply. This feature allows for easier interfacing with controller circuits.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 Field Direction Definition

As shown in [Figure 10](#), the DRV5021-Q1 is sensitive to the magnetic field component that is perpendicular to the top of the package.

**Figure 10. Direction of Sensitivity**

## Feature Description (continued)

Figure 11 shows that a positive magnetic field is defined as a **south pole** near the marked side of the package.

**Figure 11. Field Direction Definition**

### 7.3.2 Device Output

If the device is powered on with a magnetic field strength between  $B_{RP}$  and  $B_{OP}$ , then the device output is indeterminate. If the field strength is greater than  $B_{OP}$ , then the output is pulled low. If the field strength is less than  $B_{RP}$ , then the output is released.

**Figure 12. Output State**

## Feature Description (continued)

### 7.3.3 Power-On Time

After applying  $V_{CC}$  to the DRV5021-Q1,  $t_{on}$  must elapse before the OUT pin is valid. In case 1 (Figure 13) and case 2 (Figure 14), the output is defined assuming that magnetic field  $B_{APPLIED} > B_{OP}$ , and  $B_{APPLIED} < B_{RP}$ , respectively.

Figure 13. Case 1: Power On When  $B > B_{OP}$

Figure 14. Case 2: Power On When  $B < B_{RP}$

## Feature Description (continued)

If the device is powered on with  $B_{RP} < B_{APPLIED} < B_{OP}$ , then the device output remains in indeterminate state until the magnetic field changes. After the change in magnetic field results in a condition that meets either  $B_{OP} < B_{APPLIED}$  or  $B_{RP} > B_{APPLIED}$ , the output turns to valid state after  $t_d$  time elapses. Case 3 (Figure 15) and case 4 (Figure 16) show examples of this behavior.

**Figure 15. Case 3: Power On When  $B_{RP} < B < B_{OP}$ , Followed by  $B > B_{OP}$**

**Figure 16. Case 4: Power On When  $B_{RP} < B < B_{OP}$ , Followed by  $B < B_{RP}$**

## Feature Description (continued)

### 7.3.4 Hall Element Location

The sensing element inside the device is in the center of both packages when viewed from the top. [Figure 17](#) shows the tolerances and side-view dimensions.

**Figure 17. Hall Element Location**

## Feature Description (continued)

### 7.3.5 Propagation Delay

The DRV5021-Q1 samples the Hall element at a nominal sampling period of 16.67  $\mu\text{s}$  to detect the presence of a magnetic north or south pole. At each sampling point, the device takes the average of the current sampled value and immediately preceding sampled value of the magnetic field. If this average value crosses the  $B_{OP}$  or  $B_{RP}$  threshold, the device output changes according to the transfer function.

Figure 18 shows the DRV5021-Q1 propagation delay analysis in the proximity of a magnetic south pole. The Hall element of the DRV5021-Q1 experiences an increasing magnetic field as the magnetic south pole approaches near the device. At time  $t_2$ , the average magnetic field is  $(B_2 + B_1) / 2$ , which is less than the  $B_{OP}$  threshold of the device. At time  $t_3$ , the actual magnetic field has crossed the  $B_{OP}$  threshold. However, the average  $(B_3 + B_2) / 2$  is still less than the  $B_{OP}$  threshold. Thus, the device waits for next sample time,  $t_4$ , to start the output transition through the analog signal chain. The propagation delay,  $t_d$ , is measured as the delay from the time the magnetic field crosses the  $B_{OP}$  threshold to the time output transitions.

**Figure 18. Propagation Delay**

## Feature Description (continued)

### 7.3.6 Output Stage

The DRV5021-Q1 output stage uses an open-drain NMOS transistor that is rated to sink up to 20 mA of current. For proper operation, calculate the value of pullup resistor R1 using Equation 1.

$$\frac{V_{\text{ref max}}}{20 \text{ mA}} \leq R1 \leq \frac{V_{\text{ref min}}}{100 \mu\text{A}} \quad (1)$$

The size of R1 is a tradeoff between the OUT rise time and the current when OUT is pulled low. A lower current is generally better; however, faster transitions and bandwidth require a smaller resistor for faster switching.

In addition, the value of R1 must be > 500 Ω in order to make sure that the output driver can pull the OUT pin close to GND.

#### NOTE

$V_{\text{ref}}$  is not restricted to  $V_{\text{CC}}$ . The allowable voltage range of this pin is specified in the [Recommended Operating Conditions](#).

Figure 19. Open-Drain Output

Select a value for C2 based on the system bandwidth specifications shown in Equation 2.

$$2 \times f_{\text{BW}} \text{ (Hz)} < \frac{1}{2\pi \times R1 \times C2} \quad (2)$$

Most applications do not require this C2 filtering capacitor.

## 7.4 Device Functional Modes

The DRV5021-Q1 device is active only when  $V_{\text{CC}}$  is between 2.5 V and 5.5 V.

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The DRV5021-Q1 device is used in magnetic-field sensing applications.

### 8.2 Typical Applications

#### 8.2.1 Proximity Sensing Circuit

**Figure 20. Proximity Sensing Circuit**

##### 8.2.1.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#) as the input parameters.

**Table 1. Design Parameters**

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	$V_{CC}$	3.2 V to 3.4 V
System bandwidth	$f_{BW}$	10 kHz

##### 8.2.1.2 Detailed Design Procedure

[Table 2](#) shows the external components needed to create this design example.

**Table 2. External Components**

COMPONENT	CONNECTED BETWEEN		RECOMMENDED
C1	$V_{CC}$	GND	A 0.1-μF ceramic capacitor rated for $V_{CC}$
C2	OUT	GND	Optional: Place a ceramic capacitor to GND
R1	OUT	$V_{CC}^{(1)}$	Requires a pullup resistor

(1) Pullup resistor may be connected to a voltage source other than  $V_{CC}$ ; see the [Recommended Operating Conditions](#) for the valid range of the output pin voltage.

### 8.2.1.2.1 Configuration Example

In a 3.3-V system,  $3.2\text{ V} \leq V_{\text{ref}} \leq 3.4\text{ V}$ . Use Equation 3 to calculate the allowable range for R1.

$$\frac{V_{\text{ref max}}}{20\text{ mA}} \leq R1 \leq \frac{V_{\text{ref min}}}{100\text{ }\mu\text{A}} \quad (3)$$

For this design example, use Equation 4 to calculate the allowable range of R1.

$$\frac{3.4\text{ V}}{20\text{ mA}} \leq R1 \leq \frac{3.2\text{ V}}{100\text{ }\mu\text{A}} \quad (4)$$

Therefore:

$$170\text{ }\Omega \leq R1 \leq 32\text{ k}\Omega \quad (5)$$

After finding the allowable range of R1 (Equation 5), select a value between 500  $\Omega$  and 32 k $\Omega$  for R1.

Assuming a system bandwidth of 10 kHz, use Equation 6 to calculate the value of C2.

$$2 \times f_{\text{BW}} (\text{Hz}) < \frac{1}{2\pi \times R1 \times C2} \quad (6)$$

For this design example, use Equation 7 to calculate the value of C2.

$$2 \times 10\text{ kHz} < \frac{1}{2\pi \times R1 \times C2} \quad (7)$$

An R1 value of 10 k $\Omega$  and a C2 value less than 820 pF satisfy the requirement for a 10-kHz system bandwidth.

For R1 = 10 k $\Omega$  and C2 = 680 pF, the corner frequency for the low-pass filter is 23.4 kHz.

### 8.2.1.3 Application Curves

## 8.2.2 Alternative Two-Wire Application

For systems that require a minimal wire count, connect the device output to  $V_{CC}$  through a resistor, and sense the total supplied current near the controller. Use a shunt resistor or other circuitry to sense the current.

**Figure 24. 2-Wire Application**

### 8.2.2.1 Design Requirements

Table 3 lists the related design parameters.

**Table 3. Design Parameters**

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	$V_{CC}$	5 V
OUT resistor	R1	1 k $\Omega$
Bypass capacitor	C1	0.1 $\mu$ F
Current when $B < B_{RP}$	$I_{RELEASE}$	About 2.3 mA
Current when $B > B_{OP}$	$I_{OPERATE}$	About 7.3 mA

### 8.2.2.2 Detailed Design Procedure

When the open-drain output of the device is high-impedance, current through the path equals the  $I_{CC}$  of the device (approximately 2.3 mA).

When the output pulls low, a parallel current path is added, equal to  $V_{CC} / (R1 + r_{DS(on)})$ . Using 5 V and 1 k $\Omega$ , the parallel current is approximately 5 mA, making the total current approximately 7.3 mA.

Local bypass capacitor C1 must be at least 0.1  $\mu$ F. Use a larger value capacitor if there is high inductance in the power line interconnect.

## 9 Power Supply Recommendations

The DRV5021-Q1 device is designed to operate from an input voltage supply (VM) range between 2.5 V and 5.5 V. A 0.1- $\mu$ F (minimum) ceramic capacitor rated for  $V_{CC}$  must be placed as close to the DRV5021-Q1 device as possible.

## 10 Layout

### 10.1 Layout Guidelines

Place the bypass capacitor near the DRV5021-Q1 device for efficient power delivery with minimal inductance. Place the external pullup resistor near the microcontroller input to provide the most stable voltage at the input. Alternatively, an integrated pullup resistor within the GPIO of the microcontroller can be used.

Generally, PCB copper planes underneath the DRV5021-Q1 have no effect on magnetic flux, and do not interfere with device performance because copper is not a ferromagnetic material. However, if nearby system components contain iron or nickel, they may redirect magnetic flux in unpredictable ways.

### 10.2 Layout Example

Figure 25. DRV5021-Q1 Layout Example

## 11 Device and Documentation Support

### 11.1 Documentation Support

#### 11.1.1 Related Documentation

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

### 11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**DBZ0003A****PACKAGE OUTLINE****SOT-23 - 1.12 mm max height**

SMALL OUTLINE TRANSISTOR

4214838/F 08/2024

**NOTES:**

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.
4. Support pin may differ or may not be present.
5. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

# EXAMPLE BOARD LAYOUT

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
SCALE:15X

SOLDER MASK DETAILS

4214838/F 08/2024

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 THICK STENCIL  
SCALE:15X

4214838/F 08/2024

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
