

# ISO644x General-Purpose, Basic and Reinforced, Quad-Channel Digital Isolators

## 1 Features

- **Functional Safety-Capable** (Planned)
  - Documentation available to aid IEC 61508 system design
- Up to 150Mbps data rate
- Robust  $\text{SiO}_2$  isolation barrier:
  - High lifetime at up to  $1061\text{V}_{\text{RMS}}$  and  $1500\text{V}_{\text{DC}}$  working voltage
  - Up to  $5000\text{V}_{\text{RMS}}$  isolation rating
  - Up to 10.4kV surge capability
  - Up to  $\pm 200\text{kV}/\mu\text{s}$  minimum CMTI
  - Wide temperature range:  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  ambient operating
- Supply range: 2.25V to 5.5V
- **Overtoltage Tolerant Inputs**
- Default output *high* (ISO644x) and *low* (ISO644xF) options
- Low propagation delay: 10ns maximum at 5V, 12ns maximum at 3.3V
- Supports SPI up to: 25MHz at 5V, 20.8MHz at 3.3V
- Low pulse width distortion: 1.8ns maximum at 5V, 2.2ns maximum at 3.3V
- Robust electromagnetic compatibility (EMC)
  - System-level ESD, EFT, and surge immunity
  - Low emissions
- Wide-SOIC (DW-16) Package
- Wide-SSOP (DFP-16) Package
- SSOP (DBQ-16) Package
- Safety-Related Certifications (Planned):
  - DIN EN IEC 60747-17 (VDE 0884-17)
  - UL 1577 component recognition program
  - IEC 62368-1, IEC 61010-1, IEC 60601-1 and GB 4943.1 certifications

## 2 Applications

- Power supplies
- Grid, Electricity meter
- Motor drives
- Factory automation
- Building automation
- Lighting
- Appliances

## 3 Description

The ISO644x devices are general purpose digital isolators designed for applications requiring up to  $5000\text{V}_{\text{RMS}}$  isolation rating per UL 1577. The devices are also certified by VDE, TUV, CSA, and CQC.

The ISO644x devices provide high EMC performance while isolating CMOS or LVCMOS digital I/Os. ISO644x uses  $\text{SiO}_2$  as the isolation barrier. Each isolation channel has a logic input and output buffer separated by the insulation barrier. These devices come with enable pins that can be used to put the respective outputs in high impedance.

The ISO6440 and ISO6440F devices have all channels in the forward direction. The ISO6441 and ISO6441F devices have one reverse-direction channel. The ISO6442 and ISO6442F devices have two reverse-direction channels.

In the event of input power or signal loss, the default output is *high* for devices without the suffix F and *low* for devices with the suffix F. See the [Device Functional Modes](#) section for further details.

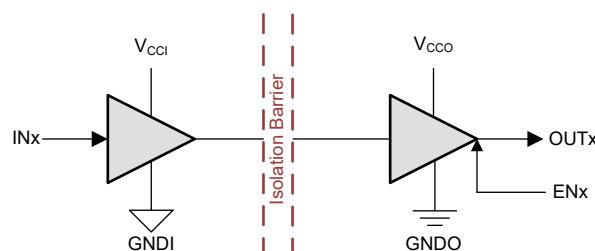

### Package Information

PART NUMBER <sup>(1)</sup>	PACKAGE	PACKAGE SIZE <sup>(2)</sup>
ISO6440 , ISO6440F	Wide-SOIC (DW-16) <sup>(3)</sup>	10.3mm × 10.3mm
ISO6441 , ISO6441F	Wide-SSOP (DFP-16) <sup>(3)</sup>	10.3mm × 4.6mm
ISO6442 , ISO6442F	SSOP (DBQ-16) <sup>(3)</sup>	6mm × 4.9mm

(1) For more information, see [Section 12](#).

(2) The package size (length × width) is a nominal value and includes pins, where applicable.

(3) Please refer to Packaging Information table on the Package Option Addendum page in the [Mechanical, Packaging, and Orderable Information](#) section for Production or Preproduction status for specific device and package.

$V_{\text{CCI}}$ =Input supply,  $V_{\text{CCO}}$ =Output supply

GNDI=Input ground, GNDI=Output ground

### Simplified Schematic

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. UNLESS OTHERWISE NOTED, this document contains PRODUCTION DATA.

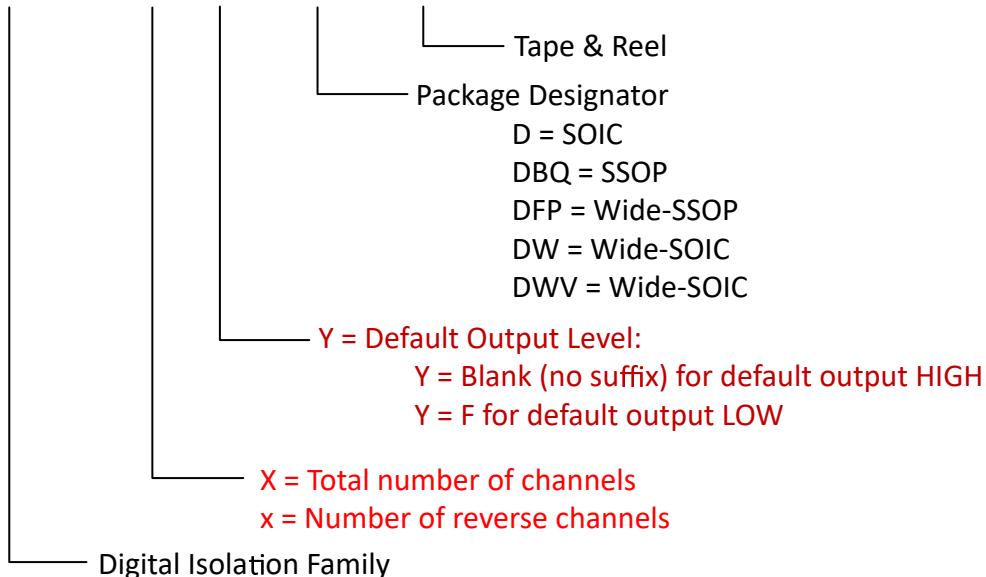

Figure 4-1. Device Nomenclature

## 5 Pin Configuration and Functions

### Pin Configuration for Wide-SOIC (DW-16) , Wide-SSOP (DFP-16) and SSOP (DBQ-16)

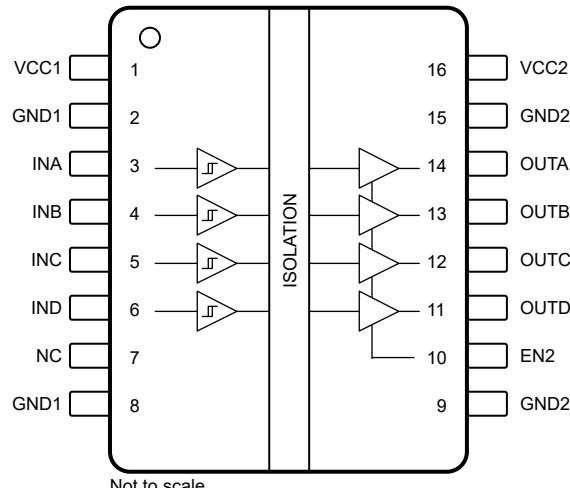

Figure 5-1. ISO6440 and ISO6440F Top View

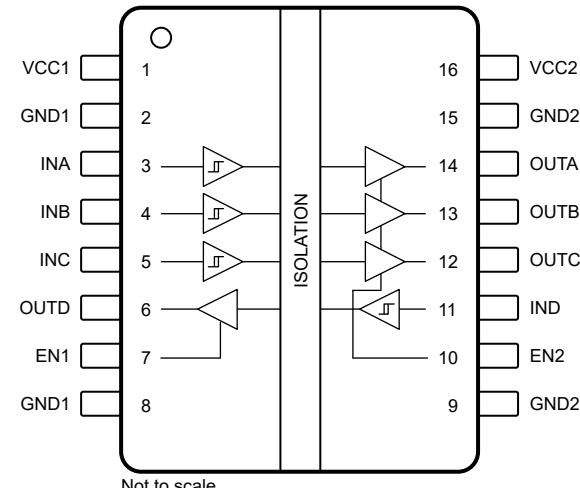

Figure 5-2. ISO6441 and ISO6441F Top View

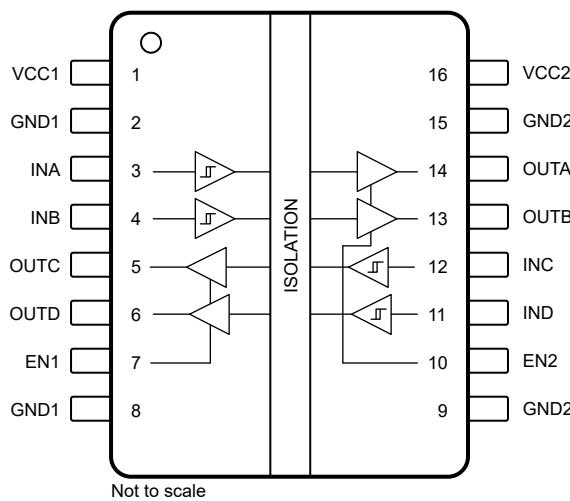

Figure 5-3. ISO6442 and ISO6442F Top View

**Table 5-1. Pin Functions**

PIN		Type <sup>(1)</sup>	DESCRIPTION
NAME	ISO6441 , ISO6441F		
EN1	7	I	Output enable 1. Output pins on side 1 are enabled when EN1 is high or open and in high-impedance state when EN1 is low.
EN2	10	I	Output enable 2. Output pins on side 2 are enabled when EN2 is high or open and in high-impedance state when EN2 is low.
GND1	2,8	—	Ground connection for V <sub>CC1</sub>
GND2	9,15	—	Ground connection for V <sub>CC2</sub>
INA	3	I	Input, channel A
INB	4	I	Input, channel B
INC	5	I	Input, channel C
IND	11	I	Input, channel D
OUTA	14	O	Output, channel A
OUTB	13	O	Output, channel B
OUTC	12	O	Output, channel C
OUTD	6	O	Output, channel D
V <sub>CC1</sub>	1	—	Power supply, side 1
V <sub>CC2</sub>	16	—	Power supply, side 2

(1) I = Input, O = Output

## 6 Specifications

### 6.1 Absolute Maximum Ratings

See<sup>(1)</sup>

		MIN	MAX	UNIT
Supply voltage <sup>(2)</sup>	V <sub>CC1</sub> to GND1	-0.5	6	V
	V <sub>CC2</sub> to GND2	-0.5	6	
Digital Input Voltage	INx to GNDx	-0.5	6	V
Digital Input Voltage	ENx to GNDx	-0.5	6	V
Digital Output Voltage	OUTx to GNDx	-0.5	V <sub>CCx</sub> + 0.5 <sup>(3)</sup>	V
Digital Output current	I <sub>O</sub>	-15	15	mA
Temperature	Operating junction temperature, T <sub>J</sub>		150	°C
	Storage temperature, T <sub>stg</sub>	-65	150	°C

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values
- (3) Maximum voltage must not exceed 6V.

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±1500	

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

## 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
$V_{CC\_RO}$ <sup>(1)</sup>	Supply Voltage Side 1 (Recommended Operating Range)	$V_{CC1} = 2.5V$ to $5V$ <sup>(3)</sup>	2.25		5.5	V
	Supply Voltage Side 2 (Recommended Operating Range)	$V_{CC2} = 2.5V$ to $5V$ <sup>(3)</sup>	2.25		5.5	V
$V_{CC\_UVLO+}$	$V_{CC}$ UVLO threshold when supply voltage is rising				2.24	V
$V_{CC\_UVLO-}$	$V_{CC}$ UVLO threshold when supply voltage is falling		1.6			
$V_{CC\_UVLO\_HYS}$	$V_{CC}$ Supply voltage UVLO hysteresis		0.1			
$V_{IH(ENx)}$	Enable: High level Input voltage	Enable: High level Input voltage	$0.7 \times V_{CCI}$ <sup>(2)</sup>		$V_{CCI}$	V
$V_{IL(ENx)}$	Enable: Low level Input voltage	Enable: Low level Input voltage	0	$0.3 \times V_{CCI}$		V
$V_{IH(INx)}$	Input: High level Input voltage		$0.7 \times V_{CCI}$ <sup>(2)</sup>		$V_{CCI}$	V
$V_{IL(INx)}$	Input: Low level Input voltage		0	$0.3 \times V_{CCI}$		V
$I_{OH}$	Output: High level output current	$V_{CCO} = 5V$ <sup>(2)</sup>	-4			
		$V_{CCO} = 3.3V$ <sup>(2)</sup>	-2			
		$V_{CCO} = 2.5V$ <sup>(2)</sup>	-1			
$I_{OL}$	Output: Low level output current	$V_{CCO} = 5V$ <sup>(2)</sup>	4			
		$V_{CCO} = 3.3V$ <sup>(2)</sup>	2			
		$V_{CCO} = 2.5V$ <sup>(2)</sup>	1			
$DR$	Data Rate	$3.0V \leq V_{CCx} \leq 5.5V$ and $C_L \leq 15pF$ <sup>(4)</sup>	0		150	Mbps
		$2.25V \leq V_{CCx} < 3V$ and $C_L \leq 10pF$ <sup>(4)</sup>	0		150	Mbps
		$2.25V \leq V_{CCx} < 3V$ and $10pF < C_L \leq 15pF$ <sup>(4)</sup>	0		100	Mbps
$T_A$	Ambient temperature		-40	25	125	°C

(1)  $V_{CC1}$  and  $V_{CC2}$  can be set independent of one another

(2)  $V_{CCI}$  = Input-side  $V_{CC}$ ;  $V_{CCO}$  = Output-side  $V_{CC}$

(3) The channel outputs are in undetermined state when  $V_{CC\_UVLO-} \leq V_{CC1}$ ,  $V_{CC2} < V_{CC\_RO(MIN)}$ .

(4) See [Section 7](#).

## 6.4 Thermal Information

PACKAGE	PINS	THERMAL METRIC <sup>(1)</sup>						UNIT
		$R_{\theta JA}$	$R_{\theta JC(\text{top})}$	$R_{\theta JB}$	$\Psi_{JT}$	$\Psi_{JB}$	$R_{\theta JC(\text{bot})}$	
DW (Wide-SOIC)	16	83	48.5	49	28	48.4	NA	°C/W
DFP (Wide-SSOP)	16	113.3	63.6	75.6	32.5	74.4	NA	°C/W
DBQ (SSOP)	16	117.8	60	69.8	29.9	69	NA	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application note.

## 6.5 Power Ratings

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>ISO6440 (default high) and ISO6440F (default low, with F suffix)</b>						
P <sub>D</sub>	Maximum power dissipation (both sides)	V <sub>CC1</sub> = V <sub>CC2</sub> = 5.5V, T <sub>J</sub> = 150°C, C <sub>L</sub> = 15pF, Input a 75MHz 50% duty cycle square wave		268.2		mW
P <sub>D1</sub>	Maximum power dissipation (side-1)			58.1		mW
P <sub>D2</sub>	Maximum power dissipation (side-2)			210.1		mW
<b>ISO6441 (default high) and ISO6441F (default low, with F suffix)</b>						
P <sub>D</sub>	Maximum power dissipation (both sides)	V <sub>CC1</sub> = V <sub>CC2</sub> = 5.5V, T <sub>J</sub> = 150°C, C <sub>L</sub> = 15pF, Input a 75MHz 50% duty cycle square wave		262.2		mW
P <sub>D1</sub>	Maximum power dissipation (side-1)			94.1		mW
P <sub>D2</sub>	Maximum power dissipation (side-2)			168.1		mW
<b>ISO6442 (default high) and ISO6442F (default low, with F suffix)</b>						
P <sub>D</sub>	Maximum power dissipation (both sides)	V <sub>CC1</sub> = V <sub>CC2</sub> = 5.5V, T <sub>J</sub> = 150°C, C <sub>L</sub> = 15pF, Input a 75MHz 50% duty cycle square wave		268		mW
P <sub>D1</sub>	Maximum power dissipation (side-1)			134		mW
P <sub>D2</sub>	Maximum power dissipation (side-2)			134		mW

## 6.6 Insulation Specifications

PARAMETER		TEST CONDITIONS	PACKAGE	UNIT
			16-DW	
<b>IEC 60664-1</b>				
CLR	External clearance <sup>(1)</sup>	Side 1 to side 2 distance through air	>8.15	mm
CPG	External creepage <sup>(1)</sup>	Side 1 to side 2 distance across package surface	>8.15	mm
DTI	Distance through the insulation	Minimum internal gap (internal clearance)	>17	μm
CTI	Comparative tracking index	IEC 60112	>600	V
	Material Group	According to IEC 60664-1	I	
		Rated mains voltage ≤ 150V <sub>RMS</sub>	I-IV	
	Overvoltage category	Rated mains voltage ≤ 300V <sub>RMS</sub>	I-IV	
		Rated mains voltage ≤ 600V <sub>RMS</sub>	I-IV	
		Rated mains voltage ≤ 1000V <sub>RMS</sub>	I-III	
<b>DIN EN IEC 60747-17 (VDE 0884-17)<sup>(2)</sup></b>				
V <sub>IORM</sub>	Maximum repetitive peak isolation voltage	AC voltage (bipolar)	1500	V <sub>PK</sub>
V <sub>IOWM</sub>	Maximum isolation working voltage	AC voltage (sine wave); time-dependent dielectric breakdown (TDDB) test.	1061	V <sub>RMS</sub>
		DC voltage	1500	V <sub>DC</sub>
V <sub>IOTM</sub>	Maximum transient isolation voltage	V <sub>TEST</sub> = V <sub>IOTM</sub> , t = 60s (qualification); V <sub>TEST</sub> = 1.2 ≤ V <sub>IOTM</sub> , t = 1s (100% production)	7071	V <sub>PK</sub>
V <sub>IMP</sub>	Maximum impulse voltage <sup>(3)</sup>	Tested in air, 1.2/50μs waveform per IEC 62368-1	8000	V <sub>PK</sub>
V <sub>IOSM</sub>	Maximum surge isolation voltage <sup>(4)</sup>	V <sub>IOSM</sub> ≤ 1.3 ≤ V <sub>IMP</sub> ; Tested in oil (qualification test), 1.2/50μs waveform per IEC 62368-1	10400	V <sub>PK</sub>
q <sub>pd</sub>	Apparent charge <sup>(5)</sup>	Method a, After Input-output safety test subgroup 2/3, V <sub>ini</sub> = V <sub>IOTM</sub> , t <sub>ini</sub> = 60s; V <sub>pd(m)</sub> = 1.2 ≤ V <sub>IORM</sub> , t <sub>m</sub> = 10s	≤5	pC
		Method a, After environmental tests subgroup 1, V <sub>ini</sub> = V <sub>IOTM</sub> , t <sub>ini</sub> = 60s; V <sub>pd(m)</sub> = 1.6 ≤ V <sub>IORM</sub> , t <sub>m</sub> = 10s	≤5	
		Method b: At routine test (100% production); V <sub>ini</sub> = 1.2 ≤ V <sub>IOTM</sub> , t <sub>ini</sub> = 1s; V <sub>pd(m)</sub> = 1.875 ≤ V <sub>IORM</sub> , t <sub>m</sub> = 1s (method b1) or V <sub>pd(m)</sub> = V <sub>ini</sub> , t <sub>m</sub> = t <sub>ini</sub> (method b2)	≤5	
C <sub>IO</sub>	Barrier capacitance, input to output <sup>(6)</sup>	V <sub>IO</sub> = 0.4 ≤ sin (2 πft), f = 1MHz	≈1.6	pF

PARAMETER		TEST CONDITIONS	PACKAGE	UNIT
			16-DW	
$R_{IO}$	Insulation resistance, input to output <sup>(6)</sup>	$V_{IO} = 500V, T_A = 25^\circ C$	$>10^{12}$	$\Omega$
		$V_{IO} = 500V, 100^\circ C \leq T_A \leq 125^\circ C$	$>10^{11}$	
		$V_{IO} = 500V$ at $T_S = 150^\circ C$	$>10^9$	
	Pollution degree		2	
	Climatic category		40/125/21	
<b>UL 1577</b>				
$V_{ISO}$	Withstand isolation voltage	$V_{TEST} = V_{ISO}, t = 60s$ (qualification); $V_{TEST} = 1.2 \leq V_{ISO}, t = 1s$ (100% production)	5000	$V_{RMS}$

- (1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance. Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves, ribs, or both on a printed circuit board are used to help increase these specifications.
- (2) This digital isolator is suitable for *safe electrical insulation* only within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.
- (3) Testing is carried out in air to determine the surge immunity of the package.
- (4) Testing is carried out in oil to determine the intrinsic surge immunity of the isolation barrier.
- (5) Apparent charge is electrical discharge caused by a partial discharge (pd).
- (6) All pins on each side of the barrier tied together creating a two-pin device.

## 6.7 Safety-Related Certifications

VDE	CSA	UL	CQC	TUV
Plan to certify according to DIN EN IEC 60747-17 (VDE 0884-17)	Plan to certify according to IEC 62368-1, IEC 61010-1 and IEC 60601	Plan to certify according to UL 1577 Component Recognition Program	Plan to certify according to GB4943.1	Plan to certify according to EN 61010-1 and EN 62368-1
Certificate planned	Certificate planned	Certificate planned	Certificate planned	Certificate planned

## 6.8 Safety Limiting Values

Safety limiting<sup>(1)</sup> intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>DW-16 Package</b>						
Is	Safety input, output, or supply current	R <sub>θJA</sub> = 83°C/W, V <sub>I</sub> = 5.5V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			273.8	mA
		R <sub>θJA</sub> = 83°C/W, V <sub>I</sub> = 3.6V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			418.3	mA
		R <sub>θJA</sub> = 83°C/W, V <sub>I</sub> = 2.75V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			547.6	mA
P <sub>S</sub>	Safety input, output, or total power	R <sub>θJA</sub> = 83°C/W, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			1506	mW
T <sub>S</sub>	Maximum safety temperature				150	°C
<b>DFP-16 Package</b>						
Is	Safety input, output, or supply current	R <sub>θJA</sub> = 113.3°C/W, V <sub>I</sub> = 5.5V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			200.6	mA
Is	Safety input, output, or supply current	R <sub>θJA</sub> = 113.3°C/W, V <sub>I</sub> = 3.6V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			306.5	mA
Is	Safety input, output, or supply current	R <sub>θJA</sub> = 113.3°C/W, V <sub>I</sub> = 2.75V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			401.2	mA
P <sub>S</sub>	Safety input, output, or total power	R <sub>θJA</sub> = 113.3°C/W, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			1103.3	mW
T <sub>S</sub>	Maximum safety temperature				150	°C
<b>DBQ-16 Package</b>						
Is	Safety input, output, or supply current	R <sub>θJA</sub> = 117.8°C/W, V <sub>I</sub> = 5.5V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			192.9	mA
Is	Safety input, output, or supply current	R <sub>θJA</sub> = 117.8°C/W, V <sub>I</sub> = 3.6V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			294.8	mA
Is	Safety input, output, or supply current	R <sub>θJA</sub> = 117.8°C/W, V <sub>I</sub> = 2.75V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			385.9	mA
P <sub>S</sub>	Safety input, output, or total power	R <sub>θJA</sub> = 117.8°C/W, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			1061.1	mW
T <sub>S</sub>	Maximum safety temperature				150	°C

- (1) The maximum safety temperature, T<sub>S</sub>, has the same value as the maximum junction temperature, T<sub>J</sub>, specified for the device. The Is and P<sub>S</sub> parameters represent the safety current and safety power respectively. The maximum limits of Is and P<sub>S</sub> should not be exceeded. These limits vary with the ambient temperature, T<sub>A</sub>.

The junction-to-air thermal resistance, R<sub>θJA</sub>, in the table is that of a device installed on a high-K test board for leaded surface-mount packages. Use these equations to calculate the value for each parameter:

T<sub>J</sub> = T<sub>A</sub> + R<sub>θJA</sub> × P, where P is the power dissipated in the device.

T<sub>J(max)</sub> = T<sub>S</sub> = T<sub>A</sub> + R<sub>θJA</sub> × P<sub>S</sub>, where T<sub>J(max)</sub> is the maximum allowed junction temperature.

P<sub>S</sub> = Is × V<sub>I</sub>, where V<sub>I</sub> is the maximum input voltage.

## 6.9 Electrical Characteristics—5V Supply

$V_{CC1} = V_{CC2} = 5V \pm 10\%$  (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OH(OUTx)}$	OUTx (output) high-level output voltage	$I_{OH} = -4mA$ ; See <a href="#">Section 7</a>	$V_{CC1} - 0.4$ <sup>(1)</sup>	0.4	$0.7 \times V_{CC1}$ <sup>(1)</sup>	V
$V_{OL(OUTx)}$	OUTx (output) low-level output voltage	$I_{OL} = 4mA$ ; See <a href="#">Section 7</a>				
$V_{IT+(INx)}$	INx (input) switching threshold voltage, rising					
$V_{IT-(INx)}$	INx (input) switching threshold voltage, falling

## 7 Parameter Measurement Information

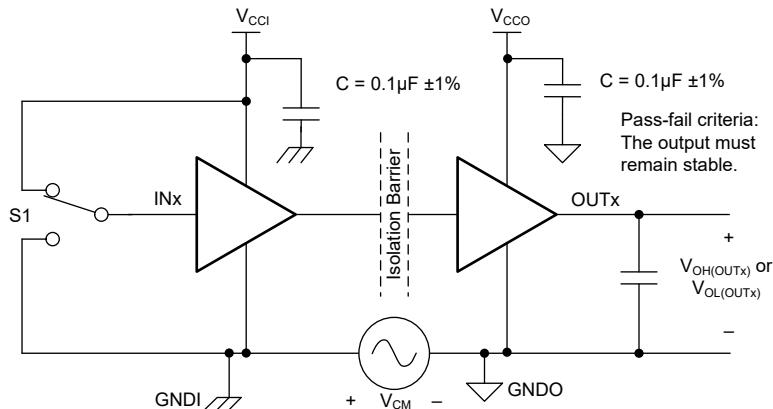

- A. The input pulse is supplied by a generator having the following characteristics: PRR  $\leq$  50kHz, 50% duty cycle,  $t_r \leq 1\text{ns}$ ,  $t_f \leq 1\text{ns}$ ,  $Z_0 = 50\Omega$ . At the input, 50Ω resistor is required to terminate INx (input) generator signal. The 50Ω resistor is not needed in the actual application.
- B.  $C_L = 15\text{pF}$  and includes instrumentation and fixture capacitance within  $\pm 20\%$ .

**Figure 7-1. Switching Characteristics Test Circuit and Voltage Waveforms**

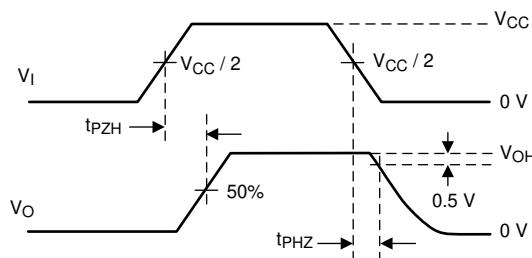

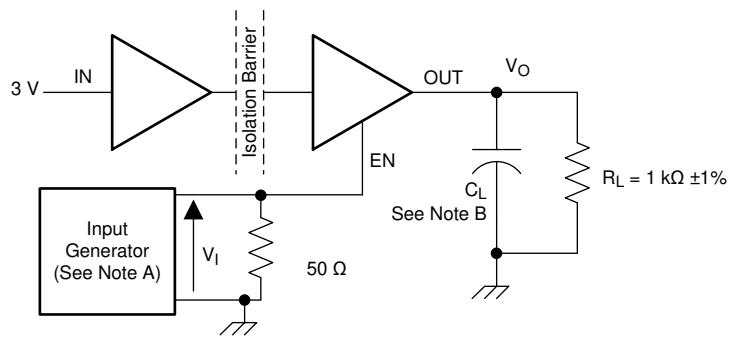

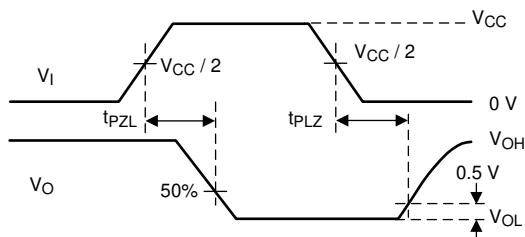

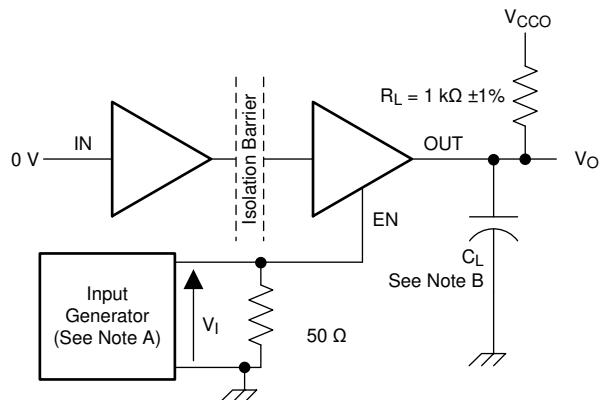

- A.  $C_L = 15\text{pF}$  and includes instrumentation and fixture capacitance within  $\pm 20\%$ .
- B. Power Supply Ramp Rate = 10mV/ns

**Figure 7-2. Default Output Delay Time Test Circuit and Voltage Waveforms**

- A.  $C_L = 15\text{pF}$  and includes instrumentation and fixture capacitance within  $\pm 20\%$ .
- B. ENx =  $V_{CC}$ , channels are enabled during CMTI test.

**Figure 7-3. Common-Mode Transient Immunity Test Circuit**

Copyright © 2016, Texas Instruments Incorporated

- A. The input pulse is supplied by a generator having the following characteristics: PRR  $\leq$  10kHz, 50% duty cycle,  $t_r \leq 3\text{ns}$ ,  $t_f \leq 3\text{ns}$ ,  $Z_O = 50\Omega$ .
- B.  $C_L = 15\text{pF}$  and includes instrumentation and fixture capacitance within  $\pm 20\%$ .

## 8 Detailed Description

### 8.1 Overview

The ISO644x family of devices have an ON-OFF keying (OOK) modulation scheme to transmit the digital data across a silicon dioxide based isolation barrier.

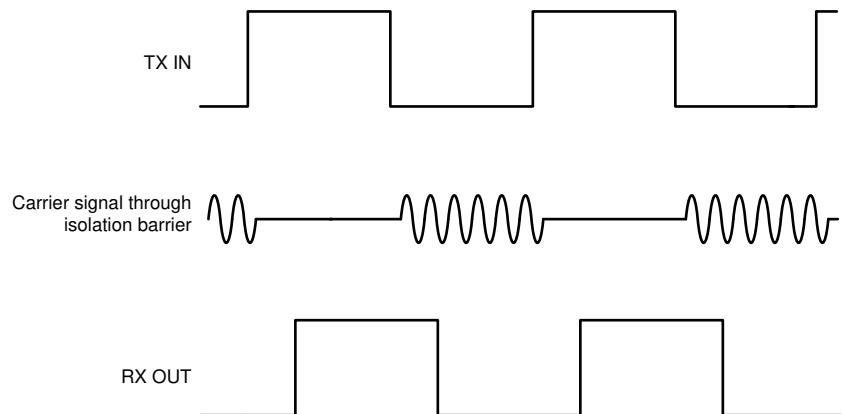

The transmitter sends a high frequency carrier across the barrier to represent one digital state and sends no signal to represent the other digital state. The receiver demodulates the signal after advanced signal conditioning and produces the output through a buffer stage. The ISO644x devices also incorporate advanced circuit techniques to maximize the CMTI performance and minimize the radiated emissions due to the high frequency carrier and IO buffer switching.

### 8.2 Functional Block Diagram

**Figure 8-1. Conceptual Block Diagram of an OOK Based Digital Isolator**

Figure 8-2 shows a conceptual detail of how the ON-OFF keying scheme works.

**Figure 8-2. On-Off Keying (OOK) Based Modulation Scheme**

## 8.3 Feature Description

Table 8-1 provides an overview of the device features.

**Table 8-1. Device Features**

PART NUMBER	CHANNEL DIRECTION	MAXIMUM DATA RATE	DEFAULT OUTPUT	PACKAGE
ISO6440	4 Forward 0 Reverse	150Mbps	High	DW-16 , DFP-16 , DBQ-16
ISO6440F	4 Forward 0 Reverse	150Mbps	Low	DW-16 , DFP-16 , DBQ-16

### 8.3.1 Electromagnetic Compatibility (EMC) Considerations

Many applications in harsh industrial environment are sensitive to disturbances such as electrostatic discharge (ESD), electrical fast transient (EFT), surge and electromagnetic emissions. These electromagnetic disturbances are defined and tested by international standards such as IEC 61000-4-x and CISPR 32. Although system-level performance and reliability depends, to a large extent, on the application board design and layout, the ISO644x family of devices incorporates many chip-level design techniques to help overall system robustness.

## 8.4 Device Functional Modes

The following table lists the functional modes for the ISO644x devices.

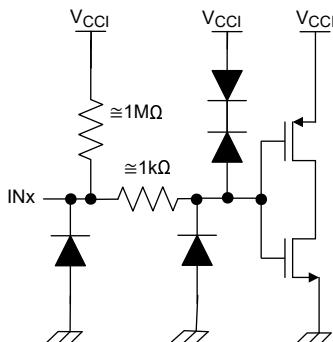

**Table 8-2. Function Table**

$V_{CCI}^{(1)}$	$V_{CCO}$	INPUT (INx)	OUTPUT ENABLE (ENx)	OUTPUT (OUTx)	COMMENTS
PU	PU	H	H or open	H	Normal Operation: A channel output assumes the logic state of the input.
		L	H or open	L	
		Open	H or open	Default	Default mode: When INx is open, the corresponding channel output goes to the default logic state. Default is <i>High</i> for ISO644x and <i>Low</i> for ISO644xF (with F suffix).
X	PU	X	L	Z	A low value of output enable causes the outputs to be high-impedance.
PD	PU	X	H or open	Default	Default mode: When $V_{CCI}$ is unpowered, a channel output assumes the logic state based on the selected default option. Default is <i>High</i> for ISO644x and <i>Low</i> for ISO644xF (with F suffix). When $V_{CCI}$ transitions from unpowered to powered-up, a channel output assumes the logic state of the input. When $V_{CCI}$ transitions from powered-up to unpowered, channel output assumes the selected default state.
X	PD	X	X	Undetermined	When $V_{CCO}$ is unpowered, a channel output is undetermined <sup>(2)</sup> . When $V_{CCO}$ transitions from unpowered to powered-up, a channel output assumes the logic state of the input.

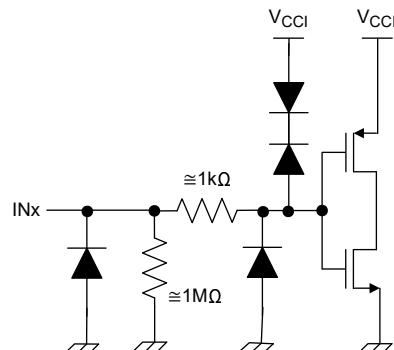

(1)  $V_{CCI}$  = Input-side  $V_{CC}$ ;  $V_{CCO}$  = Output-side  $V_{CC}$ ; PU = Powered up ( $V_{CC} \geq V_{CC\_RO(MIN)}$ ); PD = Powered down ( $V_{CC} \leq V_{CC\_UVLO-}$ ); X = Irrelevant; H = High level; L = Low level; Z = High Impedance

(2) The outputs are in undetermined state when  $V_{CC\_UVLO-} \leq V_{CCI}$  or  $V_{CCO} < V_{CC} \geq V_{CC\_RO(MIN)}$ .

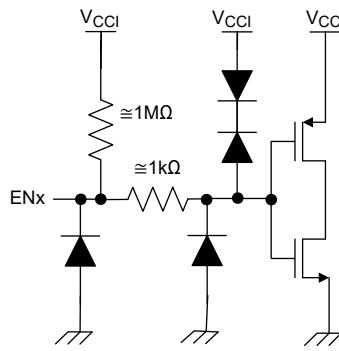

## 8.5 Device I/O Schematics

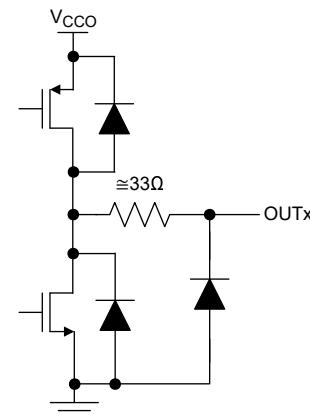

**Figure 8-3. Input (INx) Default High (Device Without F Suffix Device) Schematics**

**Figure 8-4. Input (INx) Default Low (Device With F Suffix Device) Schematics**

**Figure 8-5. Enable (ENx) Schematics**

**Figure 8-6. Output (OUTx) Schematics**

## 8.6 Overvoltage Tolerant Input

The input pins of this device, INx and ENx, support input signal voltage in excess of the supply voltage ( $V_{CC1}$ ) on the input side of the device as long as the voltage on the inputs remains below the voltages listed in the [Section 6.3](#), and [Absolute Maximum Ratings](#).

This allows the device to support input signal voltages on the inputs when the input supply,  $V_{CC1}$ , is unpowered. In this use case, the outputs transition to the default output state when the input side no longer has a valid supply.

These inputs also provide the capability of the inputs to down translate input signal voltages up to the  $V_{IMAX}$  in the [Section 6.3](#). For example, an input signal 5V high-level can be used while  $V_{CC1}$  is operating a 3.3V.

## 9 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

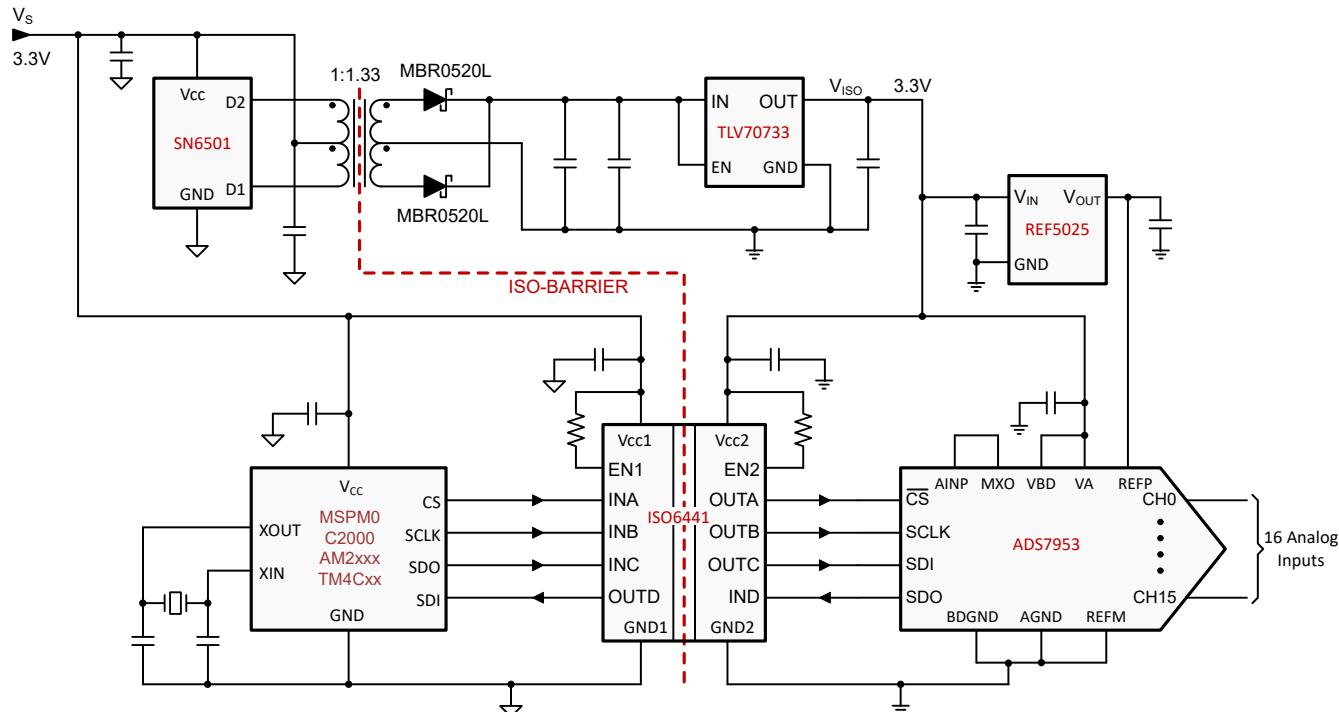

### 9.1 Application Information

The ISO644x devices are high-performance, low power, quad-channel digital isolators. These devices come with enable pins on each side which can be used to put the respective outputs in high impedance for parallel (multiple) driver applications. The ISO644x devices use single-ended CMOS-logic switching technology.

The supply voltage range is from 2.25V to 5.5V for both supplies,  $V_{CC1}$  and  $V_{CC2}$ . Since an isolation barrier separates the two sides, each side can be sourced independently with any voltage within the [Section 6.3](#). As an example, supplying ISO644x  $V_{CC1}$  with 3.3V (which is within 2.25V to 5.5V) and  $V_{CC2}$  with 5V (which is also within 2.25V to 5.5V) is possible. You can use the digital isolator as a logic-level translator in addition to providing isolation. When designing with digital isolators, keep in mind that because of the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is, MCU or FPGA), and a data converter or a line transceiver, regardless of the interface type or standard.

### 9.2 Typical Application

[Figure 9-1](#) shows the isolated serial peripheral interface (SPI).

**Figure 9-1. Isolated SPI for an Analog Input Module With 16 Inputs**

### **9.2.1 Design Requirements**

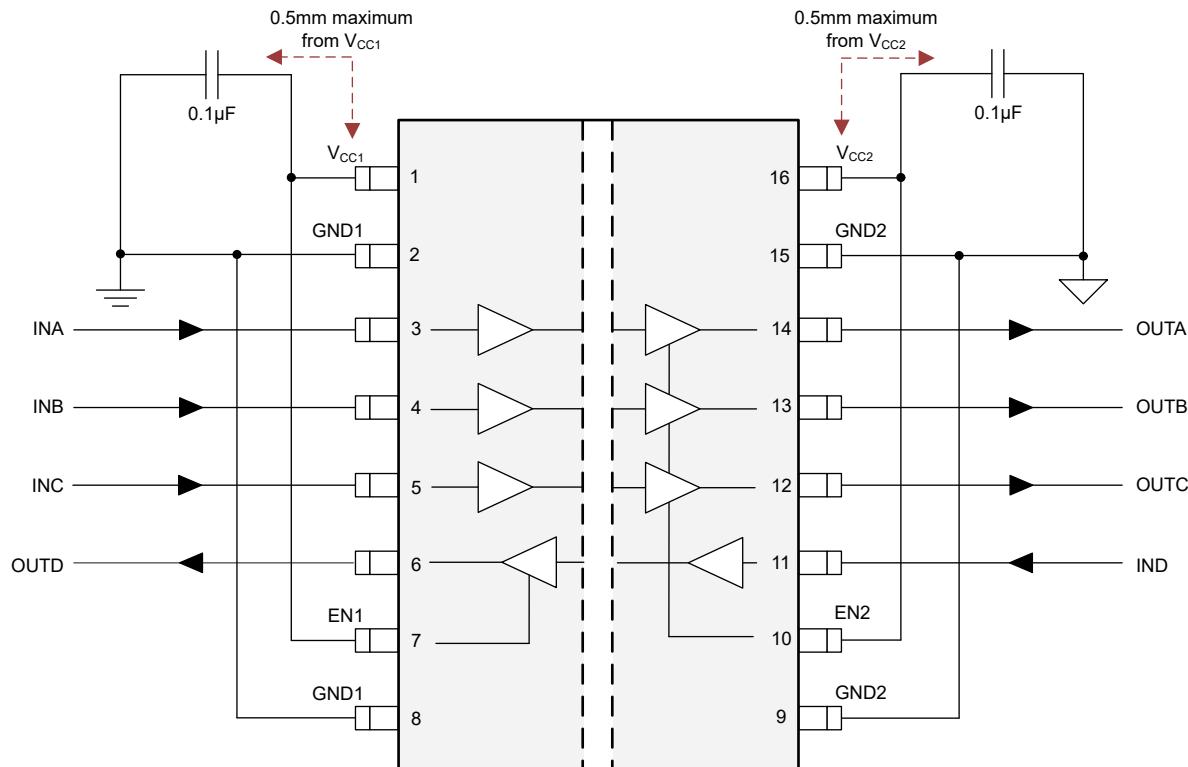

To design with these devices, use the parameters listed in [Table 9-1](#).

**Table 9-1. Design Parameters**

PARAMETER	VALUE
Supply voltage, $V_{CC1}$ and $V_{CC2}$	2.25V to 5.5V
Decoupling capacitor between $V_{CC1}$ and GND1	0.1 $\mu$ F
Decoupling capacitor from $V_{CC2}$ and GND2	0.1 $\mu$ F

### ***9.2.2 Detailed Design Procedure***

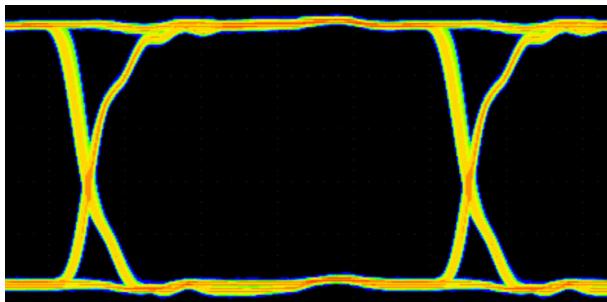

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, the ISO644x family of devices only require two external bypass capacitors to operate.

**Figure 9-2. Typical ISO644x Circuit**

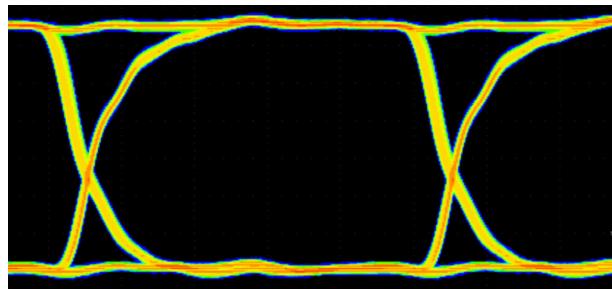

### 9.2.3 Application Curve

The following typical eye diagrams of the ISO644x family of devices indicates low jitter and wide open eye at 100Mbps.

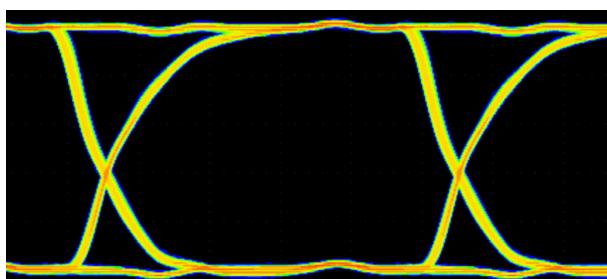

Horizontal 2ns / division, Vertical 1V / division.

**Figure 9-3. ISO644x Eye Diagram at 100Mbps

Horizontal 2ns / division, Vertical 500mV / division.

**Figure 9-4. ISO644x Eye Diagram at 100Mbps  
PRBS  $2^{16} - 1$ , 3.3V and 25°C**

Horizontal 2ns / division, Vertical 500mV / division.

**Figure 9-5. ISO644x Eye Diagram at 100Mbps PRBS  $2^{16} - 1$ , 2.5V and 25°C**

## 9.3 Power Supply Recommendations

To provide reliable operation at data rates and supply voltages, a  $0.1\mu\text{F}$  bypass capacitor is recommended at the input and output supply pins ( $V_{\text{CC}1}$  and  $V_{\text{CC}2}$ ). The capacitors must be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver. For industrial applications, please use Texas Instruments' [SN6501](#) or [SN6505B](#). For such applications, detailed power supply design and transformer selection recommendations are available in [SN6501 Transformer Driver for Isolated Power Supplies](#) or [SN6505B Low-noise, 1A Transformer Drivers for Isolated Power Supplies](#).

## 9.4 Layout

### 9.4.1 Layout Guidelines

A minimum of two layers is required to accomplish a cost optimized and low EMI PCB design. To further improve EMI, a four layer board can be used (see [Layout Example Schematic](#) ). Layer stacking for a four layer board must be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of the inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately  $100\text{pF/inch}^2$ .
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links typically have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power or ground plane system to the stack to keep the planes symmetrical. This design makes the stack mechanically stable and prevents warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, refer to the [Digital Isolator Design Guide](#) application note.

## 10.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## 10.7 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 11 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision A (October 2024) to Revision B (November 2025)</b>	<b>Page</b>
• Updated status of the data sheet to mixed status for both production and advanced information devices. Added ISO6440, ISO6440F, ISO6441F, ISO6442 and ISO6442F devices to the data sheet. Added Wide-SSOP (DFP-16) and SSOP (DBQ-16) packages to the data sheet. ....	1
• Added Device Comparison section to the data sheet. ....	3
• Updated the minimum propagation delay time, $t_{PLH}$ and $t_{PHL}$ , in the 5V Switching Characteristics and 2.5V Switching Characteristics sub-sections of the <a href="#">Specifications</a> section covering the entire family of devices with ISO6440 and ISO6442 added to the data sheet. ....	6
• Added Enable Propagation Delay Time Test Circuit and Waveform in <a href="#">Section 7</a> . ....	23

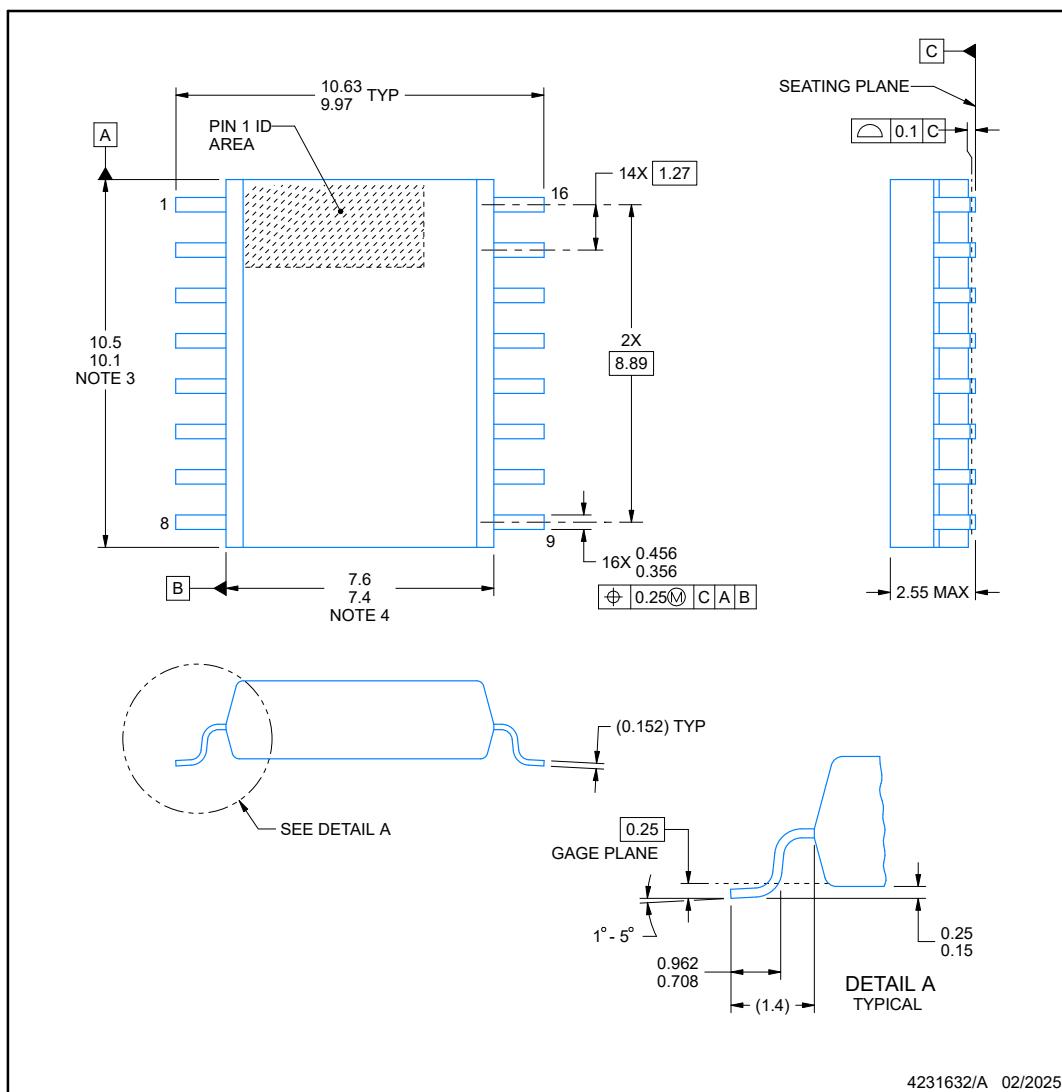

<b>Changes from Revision * (September 2024) to Revision A (October 2024)</b>	<b>Page</b>
• Production Data sheet release version for ISO6441 from Advanced Information version.....	1
• Updated the maximum data rate from 100Mbps to 150Mbps in the <i>Features</i> section and rest of document....	1
• Updated the CMTI to $\pm 200\text{kV}/\mu\text{s}$ minimum in the <i>Features</i> section and rest of document.....	1
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Split input current for the INPUT pins and EN pin with respect to default high or default low device types for leakage specification and input current through the integrated pull up or pull down resistor for the default state in the Electrical Characteristics sub-sections of the <a href="#">Specifications</a> section.....	6
• Added minimum value to Propagation delay time ( $t_{PLH}$ , $t_{PHL}$ ) for 5V Supply, 3.3V Supply and 2.5V Supply Switching Characteristics sub-sections of the <a href="#">Specifications</a> section.....	6
• Updated the maximum Pulse width distortion (PWD) at $V_{CC}$ of 5V from 2.5ns to 1.8ns, $V_{CC}$ of 3.3V from 2.5ns to 2.2ns and at 2.5V from 2.5ns to 2.6ns and updated the associated typical values in the <a href="#">Specifications</a> section.....	6
• Updated the default output delay time from input power loss ( $t_{DO}$ ) typical values in the 5V Supply, 3.3V Supply and 2.5V Supply Switching Characteristics sub-sections of the <a href="#">Specifications</a> section.....	6
• Updated the Time interval error ( $t_{ie}$ ) typical values in the 5V Suppl Supply Switching Characteristics sub-sections of the <a href="#">Specifications</a> section.....	6

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. <sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

---

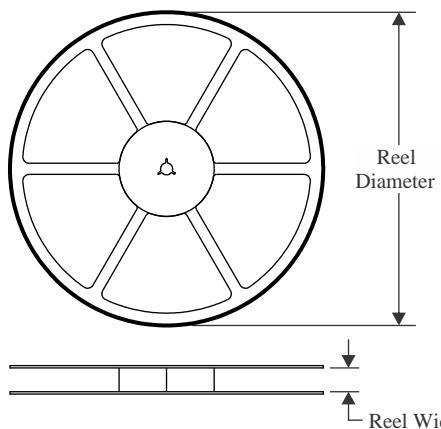

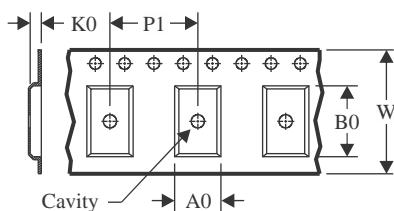

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

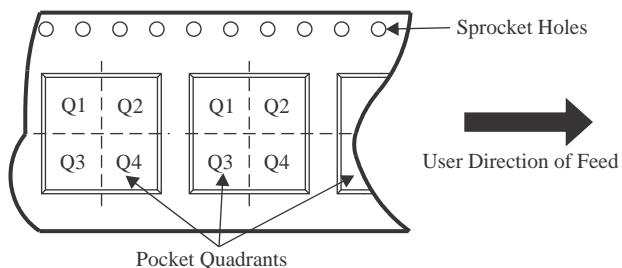

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

9. Board assembly site may have different recommendations for stencil design.

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
