TEXAS INSTRUMENTS

TLV3401, TLV3402, TLV3404

SLCS135B – AUGUST 2000 – REVISED JANUARY 2017

TLV340x Family of Nanopower, Open-Drain Output Comparators

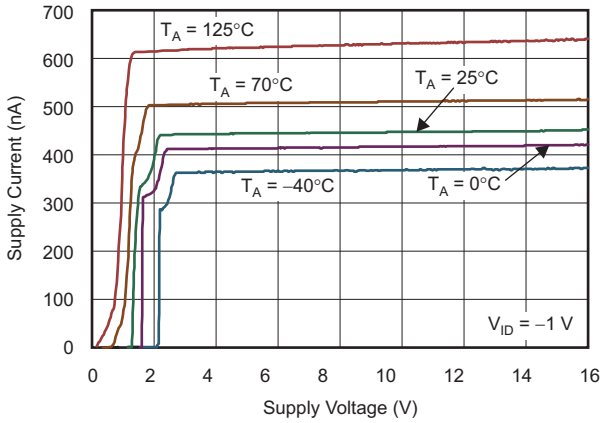
1 Features

- Low Supply Current: 470 nA Per Channel
- Input Common-Mode Range Exceeds the Rails: –0.1 V to V_{CC} + 5 V
- Supply Voltage Range: 2.5 V to 16 V
- Reverse Battery Protection Up to 18 V
- Open-Drain CMOS Output Stage
- Specified Temperature Range:
  - Commercial Grade: 0°C to +70°C
  - Industrial Grade: –40°C to +125°C
- Ultra-Small Packaging:
  - 5-Pin SOT-23 (TLV3401)
  - 8-Pin MSOP (TLV3402)
- Universal Op Amp EVM (See *Universal Operational Amplifier Evaluation Module Selection Guide* For More Information)

2 Applications

- Portable Medical Equipment
- Wireless Security Systems
- Remote Control Systems
- Handheld Instruments
- Ultra-Low Power Systems

Supply Current vs Supply Voltage



3 Description

The TLV340x is TI's first family of nanopower comparators with only 470 nA per channel supply current, which makes this device ideal for battery-powered and wireless handset applications.

The TLV340x has a minimum operating supply voltage of 2.7 V over the extended industrial temperature range (T_A = –40°C to +125°C), while having an input common-mode range of –0.1 to V_{CC} + 5 V. The low supply current makes it an ideal choice for battery-powered portable applications where quiescent current is the primary concern. Reverse battery protection guards the amplifier from an overcurrent condition due to improper battery installation. For harsh environments, the inputs can be taken 5 V above the positive supply rail without damage to the device.

All members are available in PDIP and SOIC with the single versions in the small SOT-23 package, dual versions in the VSSOP package, and quad versions in the TSSOP package.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TLV3401	SOT-23 (5)	2.90 mm × 1.60 mm
TLV3401, TLV3402	SOIC (8)	4.90 mm × 3.91 mm
TLV3401, TLV3402	PDIP (8)	9.81 mm × 6.35 mm
TLV3402	VSSOP (8)	3.00 mm × 3.00 mm
TLV3404	SOIC (14)	8.65 mm × 3.91 mm
	TSSOP (14)	5.00 mm × 4.40 mm
	PDIP (14)	19.30 mm × 6.35 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

			MIN	MAX	UNIT
Voltage	Supply, V_{CC}(2)			17	V
	Differential input, V_{ID}		–20	20	
	Input, V_I(2)(3)		0	V_{CC} + 5	
Current	Input, I_I		–10	10	mA
	Output, I_O		–10	10	
Temperature	Operating, T_A	C-suffix versions	0	70	°C
		I-suffix versions	–40	125	
	Junction, T_J			150	
	Storage, T_{stg}		–65	150	

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential voltages, are with respect to GND.
(3) Input voltage range is limited to 20 V or V_{CC} + 5 V, whichever is smaller.

7.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2000	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±1500	
	Machine model (MM)	±100	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

			MIN	MAX	UNIT
Supply voltage, V_{CC}	Single supply	C-suffix versions	2.5	16	V
		I-suffix versions	2.7	16	
	Split supply	C-suffix versions	±1.25	±8	
		I-suffix versions	±1.35	±8	
Common-mode input voltage, V_{ICR}			–0.1	V_{CC} + 5	V
Operating free-air temperature, T_A	C-suffix versions		0	70	°C
	I-suffix versions		–40	125

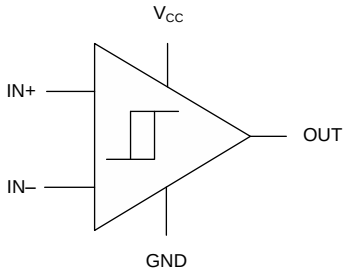
8 Detailed Description

8.1 Overview

The TLV340x is a family of nanopower comparators drawing only 470 nA per channel supply current. Having a minimum operating supply voltage of 2.7 V over the extended industrial temperature range (T_A = –40°C to +125°C), while having an input common-mode range of –0.1 to V_{CC} + 5 V makes this device ideal for battery-powered and wireless handset applications.

8.2 Functional Block Diagram



8.3 Feature Description

8.3.1 Operating Voltage

The TLV340x comparators are specified for use on a single supply from 2.5 V to 16 V (or a dual supply from ±1.25 V to ±16 V) over a temperature range of −40°C to +125°C.

8.3.2 Setting the Threshold

Using a low-power, stable reference is important when setting the transition point for the TLV340x devices. The REF3312, as shown in Figure 15, provides a 1.25-V reference voltage with low drift and only 3.9 µA of quiescent current.

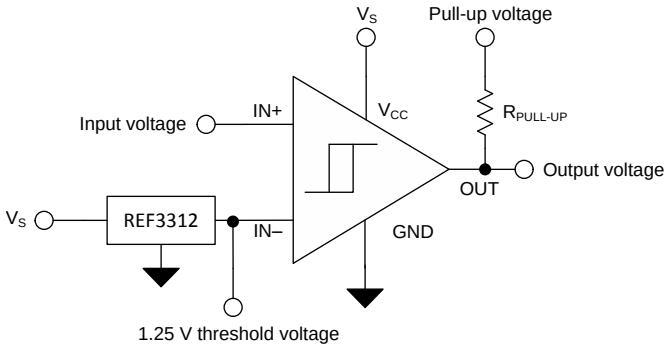


Figure 15. Setting the Threshold

8.4 Device Functional Modes

The TLV340x has a single functional mode and is operational when the power supply voltage applied ranges from 2.5 V (±1.25 V) to 16 V (±8 V).

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

Many applications require the detection of a signal (voltage or current) that exceeds a particular threshold voltage or current. Using a comparator to make that threshold detection is the easiest, lowest power and highest speed way to make a threshold detection.

9.2 Typical Application

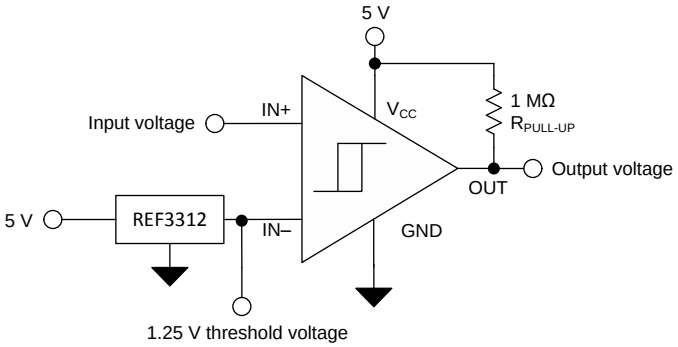

Figure 16. 1.25-V Threshold Detector

9.2.1 Design Requirements

- Detect when a signal is above or below 1.25 V
- Operate from a single 5-V power supply
- Rail-to-rail input voltage range from 0 to 5 V
- Rail-to-rail output voltage range from 0 to 5 V

9.2.2 Detailed Design Procedure

The input voltage range in the circuit illustrated in Figure 16 is limited only by the power supply applied to the TV3401. In this example with the selection of a 5-V, single-supply power supply, the input voltage range is limited to 0 to V_S + 5 V, or 0 to 10 V. The threshold voltage of 1.25 V can de derived in a variety of ways. As the TLV3401 is a very low-power device, it is desirable to also use very low power to create the threshold voltage. The REF3312 series voltage reference is selected for its stable output voltage of 1.25 V and its low power consumption of only 3.9 µA. The TLV3401 is an open-drain output comparator, requiring a pullup resistor from output to the power supply. Proper selection of the pullup resistor value requires maximizing the output voltage swing while at the same time minimizing power dissipated in the resistor when the output voltage is low. Too small of a pullup resistor can result in too much power dissipation, while too large of a pullup resistor can result in slower response times. The TLV3401 is fully specified with a 1-MΩ pullup resistor and using a 1-MΩ pullup resistor results in meeting the performance specifications listed in the *Electrical Characteristics*.

Typical Application (continued)

9.2.3 Application Curve

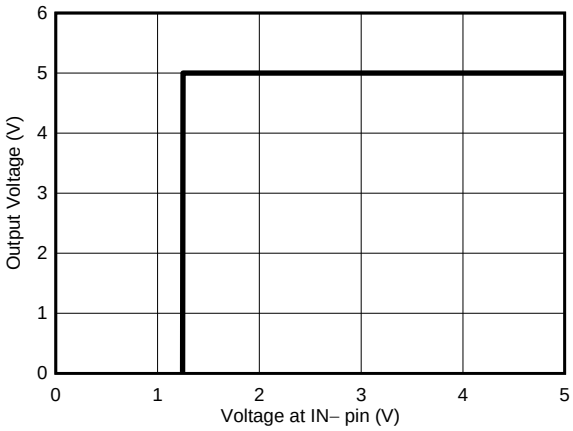

Figure 17. Transfer Function for the Threshold Detector

10 Power Supply Recommendations

The TLV340x device is specified for operation from 2.5 V to 16 V (±1.25 to ±8 V); many specifications apply from –40°C to +125°C. Parameters that can exhibit significant variance with regard to operating voltage or temperature are presented in *Typical Characteristics*.

11 Layout

11.1 Layout Guidelines

Figure 18 shows the typical connections for the TLV340x. To minimize supply noise, power supplies must be capacitively decoupled by a 0.01-µF ceramic capacitor in parallel with a 10-µF electrolytic capacitor. Comparators are very sensitive to input noise. Proper grounding (the use of a ground plane) helps to maintain the specified performance of the TLV340x family.

For best results, maintain the following layout guidelines:

1. Use a printed-circuit board (PCB) with a good, unbroken low-inductance ground plane.
2. Place a decoupling capacitor (0.1-µF ceramic, surface-mount capacitor) as close as possible to V_{CC}.
3. On the inputs and the output, keep lead lengths as short as possible to avoid unwanted parasitic feedback around the comparator. Keep inputs away from the output.
4. Solder the device directly to the PCB rather than using a socket.
5. For slow-moving input signals, take care to prevent parasitic feedback. A small capacitor (1000 pF or less) placed between the inputs can help eliminate oscillations in the transition region. This capacitor causes some degradation to propagation delay when the impedance is low. The top-side ground plane runs between the output and inputs.
6. The ground pin ground trace runs under the device up to the bypass capacitor, shielding the inputs from the outputs.

11.2 Layout Example

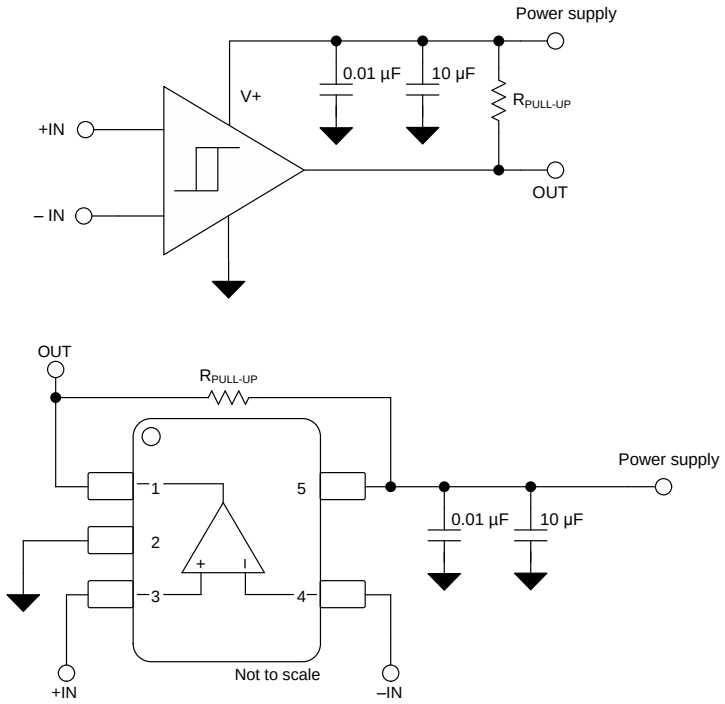

Figure 18. TLV340x Layout Example

12 Device and Documentation Support

12.1 Device Support

12.1.1 Development Support

12.1.1.1 DIP Adapter EVM

The DIP Adapter EVM tool provides an easy, low-cost way to prototype small surface mount ICs. The evaluation tool these TI packages: D or U (8-pin SOIC), PW (8-pin TSSOP), DGK (8-pin MSOP), DBV (6-pin SOT-23, 5-pin SOT23, and 3-pin SOT-23), DCK (6-pin SC-70 and 5-pin SC-70), and DRL (6-pin SOT-563). The DIP Adapter EVM may also be used with terminal strips or may be wired directly to existing circuits.

12.1.1.2 Universal Op Amp EVM

The Universal Op Amp EVM is a series of general-purpose, blank circuit boards that simplify prototyping circuits for a variety of IC package types. The evaluation module board design allows many different circuits to be constructed easily and quickly. Five models are offered, with each model intended for a specific package type. PDIP, SOIC, MSOP, TSSOP, and SOT-23 packages are all supported.

NOTE

These boards are unpopulated, so users must provide their own ICs. TI recommends requesting several op amp device samples when ordering the Universal Op Amp EVM.

12.2 Documentation Support

12.2.1 Related Documentation

The following documents are relevant for using the TLV340x devices and are recommended for reference. All are available for download at www.ti.com (unless otherwise noted):

- *Universal Op Amp EVM User Guide* (SLOU060)
- *Hardware Pace using Slope Detection* (SLAU511)
- *Bipolar High-voltage Differential Interface for Low-voltage Comparators* (TIDU039)
- *AC-Coupled Single Supply Comparator* (SLAU505)
- *ECG Implementation on the TMS320VC5505 DSP Medical Development Kit* (SPRAB36)
- *REF33xx 3.9-μA, SC70-3, SOT-23-3, and UQFN-8, 30-ppm/ °C Drift Voltage Reference* (SBOS392)

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

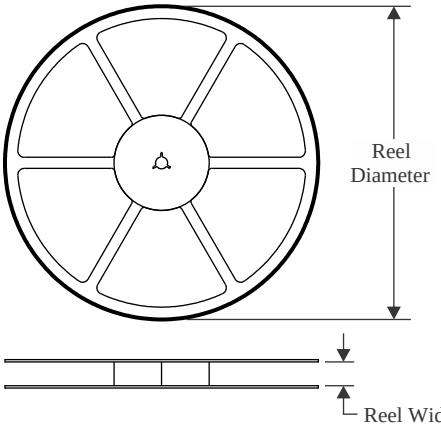
Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative

and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

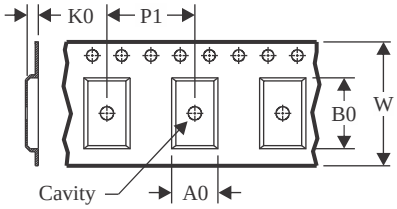
In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

REEL DIMENSIONS



TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

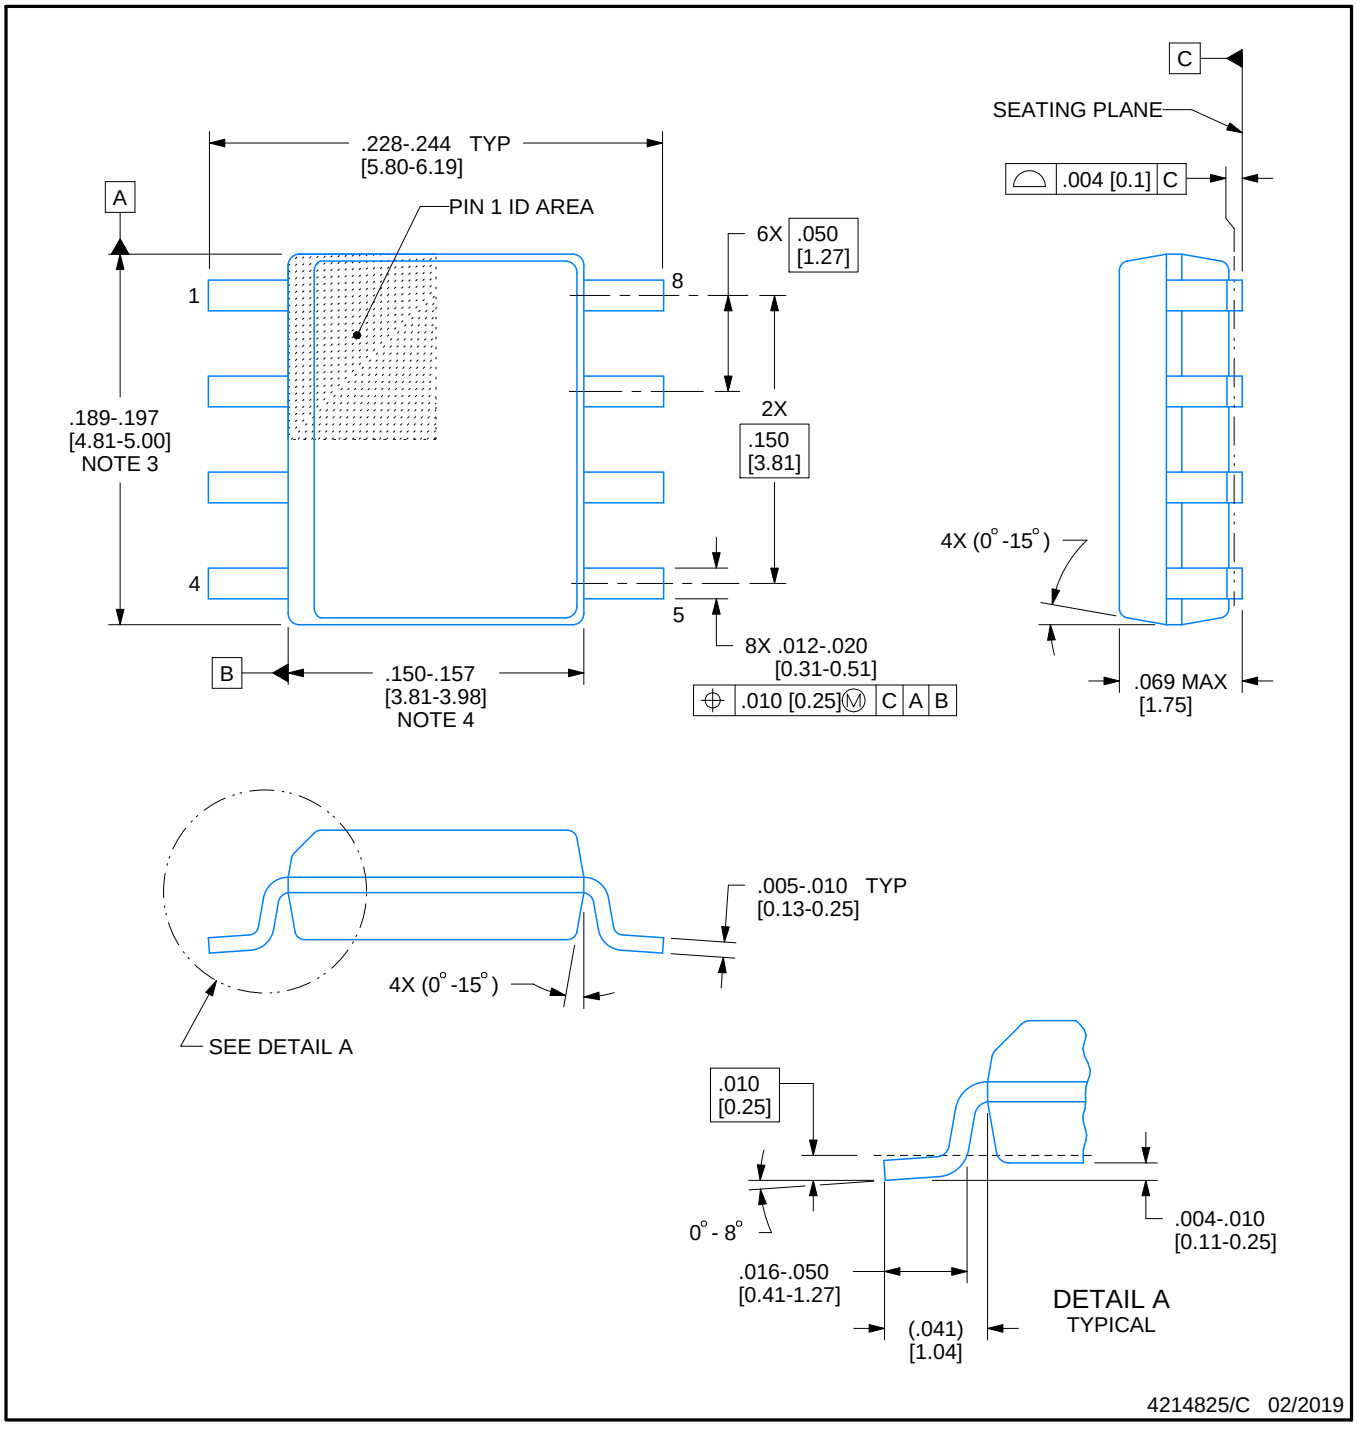
PACKAGE OUTLINE

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT



NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.
