

TSV91x Rail-to-Rail Input/Output, 8-MHz Operational Amplifiers

1 Features

- Rail-to-rail input and output
- Low noise: 18 nV/√Hz at 1 kHz
- Low power consumption: 550 μA (typical)
- High-gain bandwidth: 8 MHz
- Operating supply voltage from 2.5 V to 5.5 V
- Low input bias current: 1 pA (typical)
- Low input offset voltage: 1.5 mV (maximum)
- Low offset voltage drift: ±0.5 μV/°C (typical)
- ESD internal protection: ±4-kV human-body model (HBM)
- Extended temperature range: –40°C to 125°C

2 Applications

- Battery-powered applications
- Motor control
- Power modules
- HVAC: heating, ventilating, and air conditioning
- Washing machines
- Refrigerators
- Medical instrumentation
- Active filters
- Sensor signal conditioning
- Audio receiver
- Automotive infotainment

3 Description

The TSV91x family, which includes single-, dual-, and quad-channel operational amplifiers (op amps), is specifically designed for general-purpose applications. Featuring rail-to-rail input and output (RRIO) swings, wide bandwidth (8 MHz), and low offset voltage (0.3 mV, typical), this family is designed for a variety of applications that require a good balance between speed and power consumption. The op amps are unity-gain stable and feature an ultra-low input bias current, which enables the family to be used in applications with high-source impedances. The low input bias current allows the devices to be used for sensor interfaces, battery-supplied and portable applications, and active filtering.

The robust design of the TSV91x provides ease-of-use to the circuit designer. Features include a unity-gain stable, integrated RFI-EMI rejection filter, no phase reversal in overdrive condition, and high electrostatic discharge (ESD) protection (4-kV HBV).

Device Information⁽¹⁾

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|-------------|------------|-------------------|
| TSV911 | SOT-23 (5) | 1.60 mm × 2.90 mm |
| | SC70 (5) | 1.25 mm × 2.00 mm |
| TSV912 | SOIC (8) | 3.91 mm × 4.90 mm |
| | WSON (8) | 2.00 mm × 2.00 mm |
| | SOT-23 (8) | 1.60 mm × 2.90 mm |
| TSV914 | SOIC (14) | 8.65 mm × 3.91 mm |
| | TSSOP (14) | 4.40 mm × 5.00 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

| Changes from Revision C (January 2019) to Revision D | Page |
|--|------|
| • Added SOT-23 (8) (DDF) package information to data sheet | 1 |

| Changes from Revision B (April 2018) to Revision C | Page |
|--|------|
| • Deleted preview notations for TSV911IDBV | 1 |
| • Added SC70 package information to <i>Device Information</i> table | 1 |
| • Deleted package preview notation from TSV911 DBV (SOT-23) package | 4 |
| • Added DCK (SC70) package information to <i>Device Comparison Table</i> | 4 |
| • Deleted TSV911 DBV (SOT-23) package preview notation from <i>Pin Configuration and Functions</i> section | 5 |
| • Added TSV911 DCK (SC70) package drawing and pin functions | 5 |
| • Added TSV911 DBV and DCK package thermal information | 8 |

| Changes from Revision A (October 2017) to Revision B | Page |
|--|------|
| • Changed TSV914 14-pin TSSOP package from preview to production data in <i>Device Information</i> table | 1 |
| • Deleted package preview note from 8-pin WSON package in <i>Device Information</i> table | 1 |
| • Deleted package preview note from PW (TSSOP) package from <i>Device Comparison</i> table | 4 |
| • Deleted package preview note from DSG (WSON) package from <i>Device Comparison</i> table | 4 |
| • Deleted package preview note from TSV912 DSG package pinout drawing in <i>Pin Configuration and Functions</i> section | 6 |
| • Added DGK (VSSOP) thermal information to <i>Thermal Information: TSV912</i> table | 9 |
| • Deleted package preview note to TSV914 PW (TSSOP) package <i>Thermal Information</i> table | 9 |
| • Added PW (TSSOP) package information to <i>Thermal Information: TSV914</i> table | 9 |
| • Changed TSV914 PW (TSSOP) junction-to-ambient thermal resistance from 135.8°C/W to 205.8°C/W | 9 |
| • Changed TSV914 PW (TSSOP) junction-to-case(top) thermal resistance from 64°C/W to 106.7°C/W | 9 |
| • Changed TSV914 PW (TSSOP) junction-to-board thermal resistance from 79°C/W to 133.9°C/W | 9 |

- Changed TSV914 PW (TSSOP) junction-to-top characterization parameter from 15.7°C/W to 34.4°C/W 9
- Changed TSV914 PW (TSSOP) junction-to-board characterization parameter from 78.4°C/W to 132.6°C/W 9

Changes from Original (July 2017) to Revision A
Page

- Changed TSV914 14-pin SOIC package from preview to production data in *Device Information* table 1
- Deleted TSV911 SC70, SOT-553 and SOIC packages from *Device Information* table 1
- Deleted TSV912 VSSOP packages from *Device Information* table 1
- Deleted TSV911 SC70 and SOIC packages from pinout drawings and *Pin Functions* table 5
- Deleted TSV912 DGK and DGS packages from pinout images *Pin Functions* table 6
- Deleted package preview note from TSV914 pinout drawing and *Pin Functions* table 7
- Added TSV914 *Thermal Information* table 9
- Added 2017 copyright notice to [Figure 35](#)..... 20

5 Device Comparison Table

| DEVICE | NO. OF CHANNELS | PACKAGE LEADS | | | | | |
|--------|-----------------|---------------|-----|----|-----|----|-----|

| V+ | 4 | — | Positive (highest) supply |

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature (unless otherwise noted)⁽¹⁾

| | | | MIN | MAX | UNIT |
|-------------------------------------|------------------------|--------------|-------------------|------------|------|
| Supply voltage | | | 6 | | V |
| Signal input pins | Voltage ⁽²⁾ | Common-mode | (V–) – 0.5 | (V+) + 0.5 | V |
| | | Differential | (V+) – (V–) + 0.2 | | |
| | Current ⁽²⁾ | –10 | | 10 | mA |
| Output short-circuit ⁽³⁾ | | | Continuous | | mA |
| Specified, T _A | | | –40 | 125 | °C |
| Junction, T _J | | | 150 | | °C |
| Storage, T _{stg} | | | –65 | 150 | °C |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Input pins are diode-clamped to the power-supply rails. Current limit input signals that can swing more than 0.5 V beyond the supply rails to 10 mA or less.
- (3) Short-circuit to ground, one amplifier per package.

7.2 ESD Ratings

over operating free-air temperature range (unless otherwise noted)

| | | | VALUE | UNIT |
|--------------------|-------------------------|--|-------|------|
| V _(ESD) | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | ±4000 | V |
| | | Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾ | ±1500 | |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

| | | MIN | MAX | UNIT |
|----------------|-----------------------|-----|-----|------|
| V _S | Supply voltage | 2.5 | 5.5 | V |
| | Specified temperature | –40 | 125 | °C |

7.4 Thermal Information: TSV911

| THERMAL METRIC ⁽¹⁾ | | TSV911 | | UNIT |
|-------------------------------|--|--------------|------------|------|
| | | DBV (SOT-23) | DCK (SC70) | |
| | | 5 PINS | 5 PINS | |
| R _{θJA} | Junction-to-ambient thermal resistance | 221.7 | 263.3 | °C/W |
| R _{θJC(top)} | Junction-to-case(top) thermal resistance | 144.7 | 75.5 | °C/W |
| R _{θJB} | Junction-to-board thermal resistance | 49.7 | 51.0 | °C/W |
| ψ _{JT} | Junction-to-top characterization parameter | 26.1 | 1.0 | °C/W |
| ψ _{JB} | Junction-to-board characterization parameter | 49.0 | 50.3 | °C/W |

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

7.5 Thermal Information: TSV912

| THERMAL METRIC ⁽¹⁾ | | TSV912 | | | | UNIT |
|-------------------------------|--|----------|-------------|------------|--------------|------|
| | | D (SOIC) | DGK (VSSOP) | DSG (WSON) | DDF (SOT-23) | |
| | | 8 PINS | 8 PINS | 8 PINS | 8 PINS | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 157.6 | 201.2 | 94.4 | 184.4 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case(top) thermal resistance | 104.6 | 85.7 | 116.5 | 112.8 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 99.7 | 122.9 | 61.3 | 99.9 | °C/W |
| Ψ_{JT} | Junction-to-top characterization parameter | 55.6 | 21.2 | 13 | 18.7 | °C/W |
| Ψ_{JB} | Junction-to-board characterization parameter | 99.2 | 121.4 | 61.7 | 99.3 | °C/W |
| $R_{\theta JC(bot)}$ | Junction-to-case(bottom) thermal resistance | N/A | N/A | 34.4 | N/A | °C/W |

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

7.6 Thermal Information: TSV914

| THERMAL METRIC ⁽¹⁾ | | TSV914 | | UNIT |
|-------------------------------|--|----------|------------|------|
| | | D (SOIC) | PW (TSSOP) | |
| | | 14 PINS | 14 PINS | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 106.9 | 205.8 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance | 69 | 106.7 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 63 | 133.9 | °C/W |
| Ψ_{JT} | Junction-to-top characterization parameter | 25.9 | 34.4 | °C/W |
| Ψ_{JB} | Junction-to-board characterization parameter | 62.7 | 132.6 | °C/W |

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

7.7 Electrical Characteristics: V_S (Total Supply Voltage) = $(V_+) - (V_-) = 2.5\text{ V to }5.5\text{ V}$

at $T_A = 25^\circ\text{C}$, $R_L = 10\text{ k}\Omega$ connected to $V_S / 2$, $V_{CM} = V_S / 2$, and $V_{OUT} = V_S / 2$ (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|----------------------|--|--|------------|---------|------------|------------------|
| OFFSET VOLTAGE | | | | | | |
| V _{OS} | Input offset voltage | V _S = 5 V | | ±0.3 | ±1.5 | mV |
| | | V _S = 5 V T _A = −40°C to 125°C | | | ±3 | |
| dV _{OS} /dT | Drift | V _S = 5 V T _A = −40°C to 125°C | | ±0.5 | | μV/°C |
| PSRR | Power-supply rejection ratio | V _S = 2.5 V – 5.5 V, V _{CM} = (V−) | | ±7 | | μV/V |
| | Channel separation, DC | At DC | | 100 | | dB |
| INPUT VOLTAGE RANGE | | | | | | |

8 Detailed Description

8.1 Overview

The TSV91x series is a family of low-power, rail-to-rail input and output op amps. These devices operate from 2.5 V to 5.5 V, are unity-gain stable, and are designed for a wide range of general-purpose applications. The input common-mode voltage range includes both rails and allows the TSV91x series to be used in virtually any single-supply application. Rail-to-rail input and output swing significantly increases dynamic range, especially in low-supply applications and are designed for driving sampling analog-to-digital converters (ADCs).

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Rail-to-Rail Input

The input common-mode voltage range of the TSV91x family extends 100 mV beyond the supply rails for the full supply voltage range of 2.5 V to 5.5 V. This performance is achieved with a complementary input stage: an N-channel input differential pair in parallel with a P-channel differential pair, as shown in the [Functional Block Diagram](#). The N-channel pair is active for input voltages close to the positive rail, typically $(V+) - 1.4$ V to 100 mV above the positive supply, whereas the P-channel pair is active for inputs from 100 mV below the negative supply to approximately $(V+) - 1.4$ V. There is a small transition region, typically $(V+) - 1.2$ V to $(V+) - 1$ V, in which both pairs are on. This 200-mV transition region can vary up to 200 mV with process variation. Thus, the transition region (with both stages on) can range from $(V+) - 1.4$ V to $(V+) - 1.2$ V on the low end, and up to $(V+) - 1$ V to $(V+) - 0.8$ V on the high end. Within this transition region, PSRR, CMRR, offset voltage, offset drift, and THD can degrade compared to device operation outside this region.

8.3.2 Rail-to-Rail Output

Designed as a low-power, low-voltage operational amplifier, the TSV91x series delivers a robust output drive capability. A class AB output stage with common-source transistors achieves full rail-to-rail output swing capability. For resistive loads of 10 k Ω , the output swings to within 15 mV of either supply rail, regardless of the applied power-supply voltage. Different load conditions change the ability of the amplifier to swing close to the rails.

8.3.3 Packages with an Exposed Thermal Pad

The TSV91x family is available in packages such as the WSON-8 (DSG) which feature an exposed thermal pad. Inside the package, the die is attached to this thermal pad using an electrically conductive compound. For this reason, when using a package with an exposed thermal pad, the thermal pad must either be connected to $V-$ or left floating. Attaching the thermal pad to a potential other than $V-$ is not allowed, and the performance of the device is not assured when doing so.

8.3.4 Overload Recovery

Overload recovery is defined as the time required for the operational amplifier output to recover from a saturated state to a linear state. The output devices of the operational amplifier enter a saturation region when the output voltage exceeds the rated operating voltage, because of the high input voltage or the high gain. After the device enters the saturation region, the charge carriers in the output devices require time to return to the linear state. After the charge carriers return to the linear state, the device begins to slew at the specified slew rate. Therefore, the propagation delay (in case of an overload condition) is the sum of the overload recovery time and the slew time. The overload recovery time for the TSV91x series is approximately 200 ns.

8.4 Device Functional Modes

The TSV91x family has a single functional mode. These devices are powered on as long as the power-supply voltage is between 2.5 V (± 1.25 V) and 5.5 V (± 2.75 V).

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TSV91x series features 8-MHz bandwidth and 4.5-V/ μ s slew rate with only 550 μ A of supply current per channel, providing good AC performance at low power consumption. DC applications are well served with a low input noise voltage of 18 nV / $\sqrt{\text{Hz}}$ at 1 kHz, low input bias current, and a typical input offset voltage of 0.3 mV.

9.2 Typical Application

Figure 35 shows the TSV91x configured in a low-side, motor-control application.

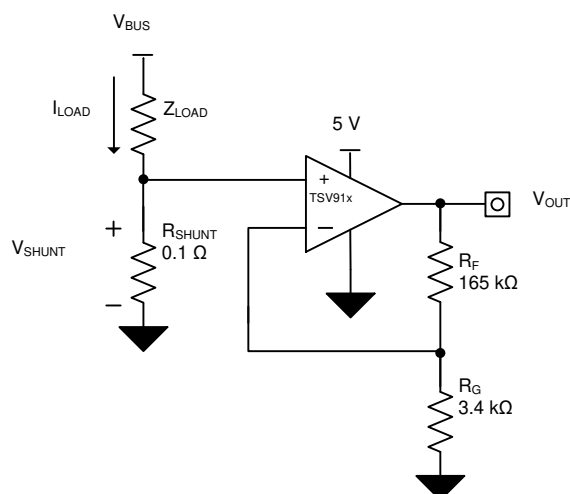

Figure 35. TSV91x in a Low-Side, Motor-Control Application

9.2.1 Design Requirements

The design requirements for this design are:

- Load current: 0 A to 1 A
- Output voltage: 4.95 V
- Maximum shunt voltage: 100 mV

Typical Application (continued)

9.2.2 Detailed Design Procedure

The transfer function of the circuit in [Figure 35](#) is shown in [Equation 1](#).

$$V_{OUT} = I_{LOAD} \times R_{SHUNT} \times \text{Gain} \quad (1)$$

The load current (I_{LOAD}) produces a voltage drop across the shunt resistor (R_{SHUNT}). The load current is set from 0 A to 1 A. To keep the shunt voltage below 100 mV at maximum load current, the largest shunt resistor is defined using [Equation 2](#).

$$R_{SHUNT} = \frac{V_{SHUNT_MAX}}{I_{LOAD_MAX}} = \frac{100\text{mV}}{1\text{A}} = 100\text{m}\Omega \quad (2)$$

Using [Equation 2](#), R_{SHUNT} is 100 mΩ. The voltage drop produced by I_{LOAD} and R_{SHUNT} is amplified by the TSV91x to produce an output voltage of approximately 0 V to 4.95 V. The gain required by the TSV91x to produce the necessary output voltage is calculated using [Equation 3](#):

$$\text{Gain} = \frac{(V_{OUT_MAX} - V_{OUT_MIN})}{(V_{IN_MAX} - V_{IN_MIN})} \quad (3)$$

Using [Equation 3](#), the required gain is calculated to be 49.5 V/V, which is set with resistors R_F and R_G . [Equation 4](#) is used to size the resistors, R_F and R_G , to set the gain of the TSV91x to 49.5 V/V.

$$\text{Gain} = 1 + \frac{(R_F)}{(R_G)} \quad (4)$$

Selecting R_F as 165 kΩ and R_G as 3.4 kΩ provides a combination that equals roughly 49.5 V/V. [Figure 36](#) shows the measured transfer function of the circuit shown in [Figure 35](#).

9.2.3 Application Curve

Figure 36. Low-Side, Current-Sense, Transfer Function

10 Power Supply Recommendations

The TSV91x series is specified for operation from 2.5 V to 5.5 V (± 1.25 V to ± 2.75 V); many specifications apply from -40°C to 125°C . The [Typical Characteristics](#) section presents parameters that can exhibit significant variance with regard to operating voltage or temperature.

CAUTION

Supply voltages larger than 6 V can permanently damage the device; see the [Absolute Maximum Ratings](#) table.

Place 0.1- μF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see the [Layout Example](#) section.

10.1 Input and ESD Protection

The TSV91x series incorporates internal ESD protection circuits on all pins. For input and output pins, this protection consists of current-steering diodes connected between the input and power-supply pins. These ESD protection diodes provide in-circuit, input overdrive protection, as long as the current is limited to 10-mA, as stated in the [Absolute Maximum Ratings](#) table. [Figure 37](#) shows how a series input resistor is added to the driven input to limit the input current. The added resistor contributes thermal noise at the amplifier input and the value must be kept to a minimum in noise-sensitive applications.

Figure 37. Input Current Protection

11 Layout

11.1 Layout Guidelines

For best operational performance of the device, use good printed-circuit board (PCB) layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole and of op amp itself. Bypass capacitors are used to reduce the coupled noise by providing low-impedance power sources local to the analog circuitry.
 - Connect low-ESR, 0.1- μ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single-supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces electromagnetic interference (EMI) noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current. For more detailed information, see [Circuit Board Layout Techniques](#).
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If these traces cannot be kept separate, crossing the sensitive trace perpendicular is much better as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. As shown in [Figure 39](#), keeping RF and RG close to the inverting input minimizes parasitic capacitance on the inverting input.
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.
- Cleaning the PCB following board assembly is recommended for best performance.
- Any precision integrated circuit can experience performance shifts resulting from moisture ingress into the plastic package. Following any aqueous PCB cleaning process, baking the PCB assembly is recommended to remove moisture introduced into the device packaging during the cleaning process. A low-temperature, post-cleaning bake at 85°C for 30 minutes is sufficient for most circumstances.

12.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

DCK0005A

PACKAGE OUTLINE

SOT - 1.1 max height

SMALL OUTLINE TRANSISTOR

4214834/G 11/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-203.
4. Support pin may differ or may not be present.
5. Lead width does not comply with JEDEC.
6. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side.

EXAMPLE BOARD LAYOUT

DCK0005A

SOT - 1.1 max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:18X

SOLDER MASK DETAILS

4214834/G 11/2024

NOTES: (continued)

7. Publication IPC-7351 may have alternate designs.
8. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOLDER PASTE EXAMPLE
BASED ON 0.125 THICK STENCIL
SCALE:18X

4214834/G 11/2024

NOTES: (continued)

9. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
10. Board assembly site may have different recommendations for stencil design.

SOT-23-THIN - 1.1 mm max height

PLASTIC SMALL OUTLINE

4222047/E 07/2024

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

2. This drawing is subject to change without notice.

3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.

7. Board assembly site may have different recommendations for stencil design.

D0008A

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.
