CDC391 1-LINE TO 6-LINE CLOCK DRIVER WITH SELECTABLE POLARITY AND 3-STATE OUTPUTS

SCAS334A - DECEMBER 1992 - REVISED NOVEMBER 1995

- Low Output Skew for Clock-Distribution and Clock-Generation Applications
- TTL-Compatible Inputs and Outputs
- Distributes One Clock Input to Six Clock Outputs
- Polarity Control Selects True or Complementary Outputs
- Distributed V_{CC} and GND Pins Reduce Switching Noise
- High-Drive Outputs (-48-mA I_{OH}, 48-mA I_{OI})
- State-of-the-Art EPIC-IIB™ BiCMOS Design Significantly Reduces Power Dissipation
- Packaged in Plastic Small-Outline Package

description

The CDC391 contains a clock-driver circuit that distributes one input signal to six outputs with minimum skew for clock distribution. Through the use of the polarity-control (\overline{T}/C) inputs, various combinations of true and complementary outputs can be obtained. The output-enable (\overline{OE}) input is provided to disable the outputs to a high-impedance state.

The CDC391 is characterized for operation from −40°C to 85°C.

FUNCTION TABLE

	INPUTS	OUTPUT	
OE	T/C	Α	Υ
Н	Х	Χ	Z
L	L	L	L
L	L	Н	Н
L	Н	L	Н
L	Н	Н	L

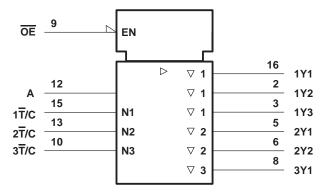

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

EPIC-IIB is a trademark of Texas Instruments Incorporated.

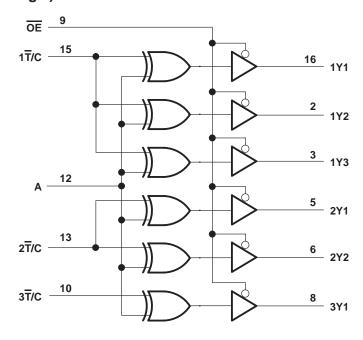

logic symbol†

[†] This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagram (positive logic)

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage range, V _{CC}	–0.5 V to 7 V
Input voltage range, V _I (see Note 1)	–0.5 V to 7 V
Voltage range applied to any output in the high state or power-off state, VO	$-0.5 \text{ V to V}_{CC} + 0.5 \text{ V}$
Current into any output in the low state, I _O	96 mA
Input clamp current, I _{IK} (V _I < 0)	–18 mA
Output clamp current, I _{OK} (V _O < 0)	–50 mA
Maximum power dissipation at $T_A = 55^{\circ}C$ (in still air) (see Note 2)	0.77 W
Storage temperature range, T _{Stq}	-65° C to 150° C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

recommended operating conditions (see Note 3)

		MIN	NOM	MAX	UNIT
VCC	Supply voltage	4.75	5	5.25	V
V_{IH}	High-level input voltage	2			V
V_{IL}	Low-level input voltage			0.8	V
٧ _I	Input voltage	0		VCC	V
ІОН	High-level output current			-48	mA
lOL	Low-level output current			48	mA
Δt/Δν	Input transition rise or fall rate			5	ns/V
fclock	Input clock frequency			100	MHz
TA	Operating free-air temperature	-40		85	°C

NOTE 3: Unused inputs must be held high or low to prevent them from floating.

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		MIN T	YP‡ I	MAX	UNIT		
VIK	V _{CC} = 4.75 V,	I _I = -18 mA	I _I = -18 mA			-1.2	V
Voн	$V_{CC} = 4.75 \text{ V},$	$I_{OH} = -48 \text{ mA}$	I _{OH} = – 48 mA				V
VOL	$V_{CC} = 4.75 V,$	I _{OL} = 48 mA				0.5	V
lį	$V_{CC} = 5.25 \text{ V},$	$V_I = V_{CC}$ or GND			±1	μΑ	
loz	$V_{CC} = 5.25 \text{ V},$	$V_O = V_{CC}$ or GND			±50	μΑ	
ΙΟ§	$V_{CC} = 5.25 \text{ V},$	V _O = 2.5 V		-15	-	-100	mA
			Outputs high			10	
ICC	$V_{CC} = 5.25 \text{ V},$ $V_{I} = V_{CC} \text{ or GND}$	$I_{O}=0,$	Outputs low			40	mA
	V1 = VCC 01 0112		Outputs disabled			10	
C _i	V _I = 2.5 V or 0.5 V				3		pF
Co	V _O = 2.5 V or 0.5 V	·			5		pF

[‡] All typical values are at $V_{CC} = 5 \text{ V}$, $T_A = 25^{\circ}\text{C}$.

^{2.} The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 300 mils. For more information, refer to the Package Thermal Considerations application note in the 1994 ABT Advanced BiCMOS Technology Data Book, literature number SCBD002B.

[§] Not more than one output should be tested at a time, and the duration of the test should not exceed one second.

PARAMETER MEASUREMENT INFORMATION

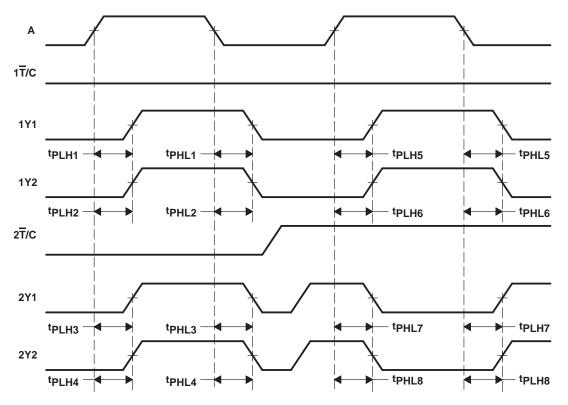

NOTES: A. C_L includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, $Z_O = 50 \ \Omega$, $t_f \leq 2.5 \ ns$, $t_f \leq 2.5 \ ns$.
- D. The outputs are measured one at a time with one transition per measurement.

Figure 1. Load Circuit and Voltage Waveforms

PARAMETER MEASUREMENT INFORMATION

NOTES: A. Output skew, $t_{Sk(0)}$, from A to any Y (same phase), can be measured only between outputs for which the respective polarity-control inputs (\overline{T}/C) are at the same logic level. It is calculated as the greater of:

- The difference between the fastest and slowest of tpLH from A↑ to any Y (e.g., tpLHn, n = 1 to 4; or tpLHn, n = 5 to 6)
- The difference between the fastest and slowest of tpHL from A↓ to any Y (e.g., tpHLn, n = 1 to 4; or tpHLn, n = 5 to 6)
- The difference between the fastest and slowest of tpLH from A↓ to any Y (e.g., tpLHn, n = 7 to 8)
- The difference between the fastest and slowest of tp_{HL} from A[↑] to any Y (e.g., tp_{HLn}, n = 7 to 8)
- B. Output skew, t_{sk(0)}, from A to any Y (any phase), can be measured between outputs for which the respective polarity-control inputs (T/C) are at the same or different logic levels. It is calculated as the greater of:
 - The difference between the fastest and slowest of tp_{LH} from A[↑] to any Y or tp_{HL} from A[↑] to any Y (e.g., tp_{LHn}, n = 1 to 4; or tp_{LHn}, n = 5 to 6, and tp_{HLn}, n = 7 to 8)
 - The difference between the fastest and slowest of tpHL from A↓ to any Y or tpLH from A↓ to any Y (e.g., tpHLn, n = 1 to 4; or tpHLn, n = 5 to 6, and tpLHn, n = 7 to 8)

PACKAGING INFORMATION

Orderable part number	Status	Material type	Package Pins	Package qty Carrier	RoHS	Lead finish/ Ball material	MSL rating/ Peak reflow	Op temp (°C)	Part marking (6)
CDC391D	Active	Production	SOIC (D) 16	40 TUBE	Yes	NIPDAU	(5) Level-1-260C-UNLIM	-40 to 85	CDC391
CDC391D.B	Active	Production	SOIC (D) 16	40 TUBE	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 85	CDC391

⁽¹⁾ Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

⁽²⁾ Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

⁽⁴⁾ Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

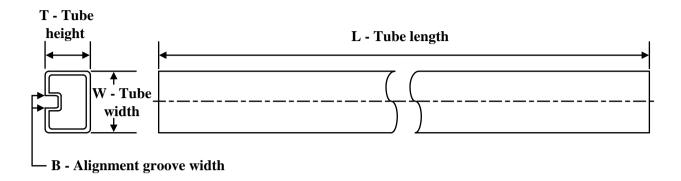

⁽⁵⁾ MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.
