INA105 Precision Unity Gain Differential Amplifier

1 Features

- Unity-gain difference amplifier configuration
- High common-mode rejection (CMRR): 72dB (minimum)
- Low gain error: 0.025% (maximum)
- Low gain drift: 5ppm/°C (maximum)
- Low nonlinearity: 0.001% (maximum)
- Bandwidth: 1MHz (typical)
- Low offset voltage: 500µV (maximum)
- Low offset voltage drift: 20µV/°C (maximum)

2 Applications

- Battery cell formation & test equipment
- Sensor tag & data logger
- Servo drive position feedback
- Level transmitter
- String inverter

3 Description

The INA105 is a monolithic Gain = 1 differential amplifier consisting of a precision operational amplifier (op amp) and on-chip metal film resistor network. The resistors are laser trimmed for accurate gain and high common-mode rejection. Excellent tracking of resistors (TCR) maintains gain accuracy and common-mode rejection over temperature. The input common-mode range extends beyond the positive and negative supply rails.

The differential amplifier is the foundation of many commonly used circuits. The INA105 provides precision circuit function without using an expensive precision resistor network. The INA105 is available in 8-pin plastic DIP, SOIC surface-mount and TO-99 metal packages.

Package Information

PART NUMBER	PACKAGE(1)	PACKAGE SIZE(2)
INA105	P (PDIP, 8)	9.81mm × 9.43mm
	D (SOIC, 8)	4.90mm × 6.00mm
	LMC (TO-CAN, 8)	8.96mm × 8.96mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.

Table 4-1. Pin Functions

NAME	NO.	TYPE	DESCRIPTION
+In	3	Input	Positive (noninverting) input 25kΩ resistor to noninverting terminal of op amp
-In	2	Input	Negative (inverting) input 25kΩ resistor to inverting terminal of op amp
Output	6	Output	Output
Ref	1	Input	Reference input 25kΩ resistor to noninverting terminal of op amp
V+	7	–	Positive (highest) power supply
V-	4	–	Negative (lowest) power supply
Sense	5	Input	Sense input 25kΩ resistor to inverting terminal of op amp
NC	8	–	No internal connection (can be left floating)

5 Specifications

Note

TI has qualified multiple fabrication flows for this device. Differences in performance are labeled by chip site origin (CSO). For system robustness, designing for all flows is highly recommended. For more information, please see Section 8.1.1.

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
Supply voltage, V_S = (V+) – (V–)		0	36	V
Signal input pins	Single Supply, +In, –In, Sense, and REF	0	V_S	V
Output short-circuit(2)		Continuous		
Temperature	Operating, T_A (INA105KP, KU)	–40	85	°C
	Operating, T_A (INA105AM, BM)	–55	125	
	Junction, T_J		150	
	Storage, T_{stg} (INA105KP, KU)	–40	125	
	Storage, T_{stg} (INA105AM, BM)	–65	150	

(1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
(2) Short-circuit to V_S / 2.

5.2 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
Supply voltage	Single supply	10	30	36	V
	Dual supply	±5	±15	±18	
Specified temperature		–40		85	°C

5.3 Thermal Information

THERMAL METRIC(1)		INA105 D (SOIC) 8 PINS	INA105 P (PDIP) 8 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	108.9	74.1	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	45.9	52.3	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	56.6	38.3	°C/W
ψ_{JT}	Junction-to-top characterization parameter	4.8	18.3	°C/W
ψ_{JB}	Junction-to-board characterization parameter	55.7	37.3	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application note.

5.4 Electrical Characteristics

at T_A = 25°C, V_S = ±15V, R_L = 10kΩ, V_{REF} = 0V, G = 1, and all chip site origins (CSO), unless otherwise noted.

PARAMETER		TEST CONDITIONS			MIN	TYP	MAX	UNIT

6 Detailed Description

6.1 Overview

The INA105 consists of a high-precision operational amplifier and four trimmed, on-chip resistors. The device can be configured to make a wide variety of amplifier configurations, including difference, non-inverting, and inverting configurations. The integrated, matched resistors provide an advantage over discrete implementation.

Much of the DC performance of op amp circuits depends on the accuracy of the surrounding resistors. The resistors on the INA105 are laid out to be tightly matched. The resistors of each part are matched on-chop and tested for matching accuracy. As a result, the INA105 provides high accuracy for specifications such as gain drift, common-mode rejection ratio, and gain error.

6.2 Functional Block Diagram

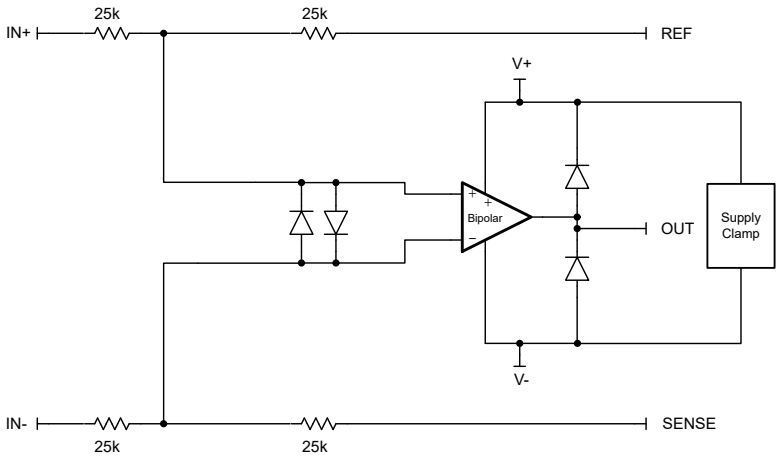

Figure 6-1. INA105 Internal Schematic for CSO: SHE

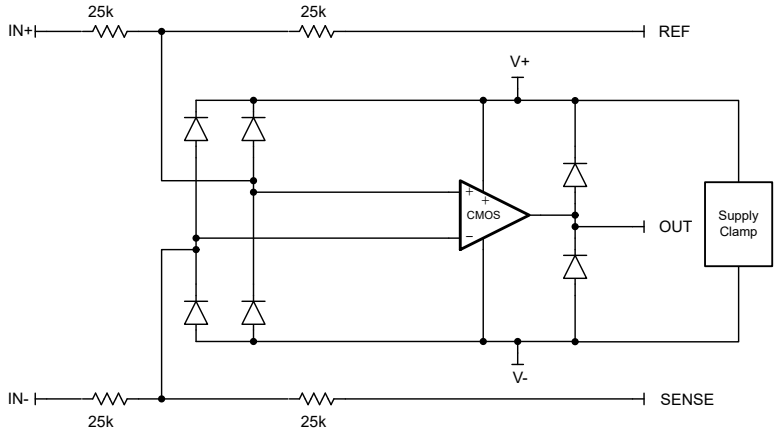

Figure 6-2. INA105 Internal Schematic for CSO:RFB

6.3 Feature Description

6.3.1 Gain Error and Drift

Gain error in the INA105 is limited by the mismatch of the integrated precision resistors. Gain drift is limited by the slight mismatch of the temperature coefficient of integrated resistors. The integrated resistors are precision-matched with low temperature coefficient resistors to improve overall gain drift compared to the discrete implementation of differences amplifiers build when using external resistors.

6.3.2 Input Voltage Range

The INA105 difference amplifier is able to achieve a wide input common-mode voltage range by dividing down the input signal with high-precision resistor divider. The internal resistors divide down the voltage before the voltage reaches the internal op amp and provide protection to the op amp inputs. Figure 6-3 shows an example of how the voltage division works in a difference-amplifier configuration. For the INA105 with a supply voltage of ±15V, the input common-mode voltage range is ±20V.

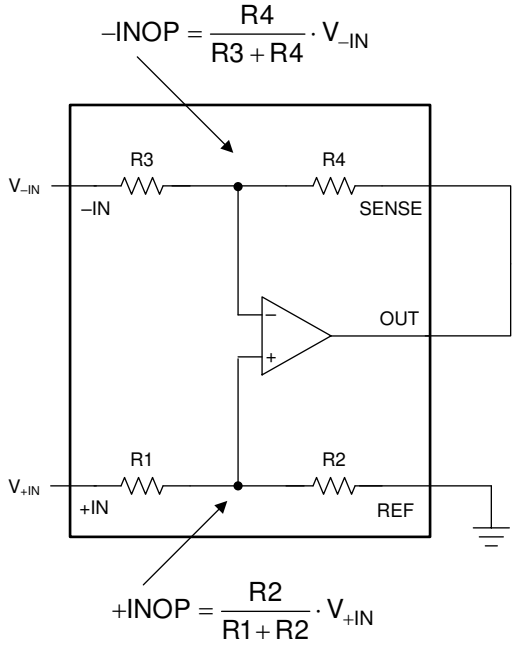

Figure 6-3. Voltage Division in the Difference Amplifier Configuration

6.4 Device Functional Modes

The INA105 has one functional mode. The device is specified on a power supply of ±15V and can operate on a power supply from ±5V to ±18V with derated performance. See *Typical Characteristics*.

7 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

7.1 Application Information

Figure 7-1 shows the basic connections required for operation of the INA105. Connect power-supply bypass capacitors close to the device pins.

The differential input signal is connected to pins 2 and 3, as shown. The source impedances connected to the inputs must be nearly equal for good common-mode rejection. A 5Ω mismatch in source impedance can degrade the common-mode rejection of a typical device to approximately 80dB. If the source has a known mismatch in source impedance, an additional resistor in series with one input can be used to preserve good common-mode rejection.

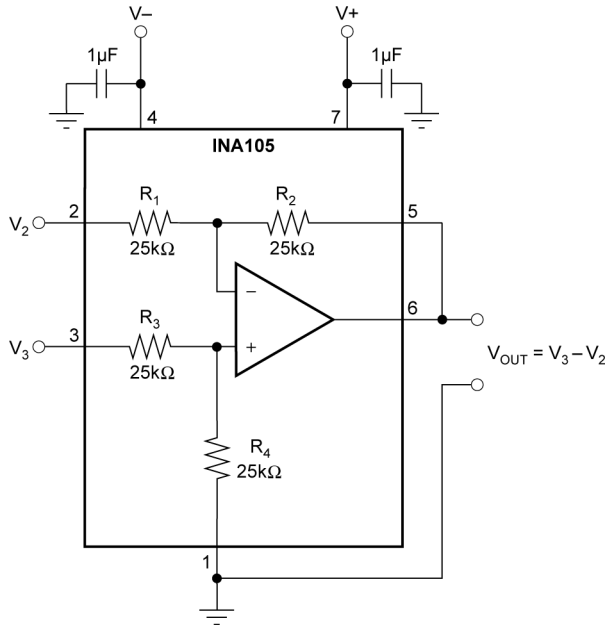

Figure 7-1. Basic Power-Supply and Signal Connections

The output is referred to the output reference terminal (pin 1) which is normally grounded. A voltage applied to the Ref terminal is summed with the output signal. This can be used to null offset voltage as shown in Figure 7-2. To maintain good common-mode rejection, keep the source impedance of a signal applied to the Ref terminal less than 10Ω.

Do not interchange pins 1 and 3 or pins 2 and 5, even though nominal resistor values are equal. These resistors are laser trimmed for precise resistor ratios to achieve accurate gain and highest CMR.

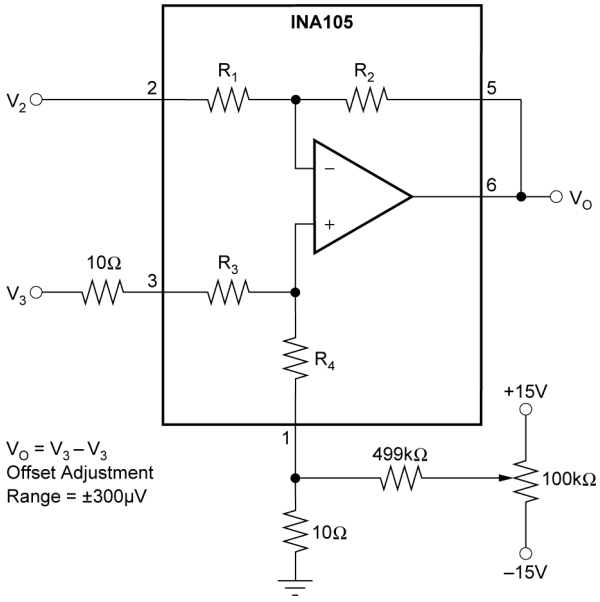

Figure 7-2. Offset Adjustment

7.2 Typical Application

The INA105 can be used in a variety of applications. Figure 7-3 shows one example.

7.4 Power Supply Recommendations

The nominal performance of the INA105 is specified with a supply voltage of ±15V. The device operates using power supplies from ±5V to ±18V with varying performance. Parameters varying across the operating voltage and reference voltage range can be referenced in the *Typical Characteristics*.

TI highly recommends to add low-ESR ceramic bypass capacitors (C_{BYP}) between each supply pin and ground. Only one C_{BYP} is sufficient for single supply operation. Place the C_{BYP} as close to the device as possible to reduce coupling errors from noisy or high-impedance power supplies. Route the power supply trace through C_{BYP} before reaching the device power supply terminals. For more information, see *Layout Guidelines*.

7.5 Layout

7.5.1 Layout Guidelines

Attention to good layout practices is always recommended. For best operational performance of the device, use good PCB layout practices, including:

- Make sure that both input paths are well-matched for source impedance and capacitance to avoid converting common-mode signals into differential signals.
- Noise propagates into analog circuitry through the power pins of the circuit as a whole and of the device. Bypass capacitors reduce the coupled noise by providing low-impedance power sources local to the analog circuitry.
  - Connect low-ESR, 0.1µF ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single-supply applications.
- To reduce parasitic coupling, route the input traces as far away from the supply or output traces as possible. If these traces cannot be kept separate, crossing the sensitive trace perpendicular is preferred over crossing in parallel with the noisy trace.
- Place the external components as close to the device as possible.
- Keep the traces as short as possible.

7.5.2 Layout Examples

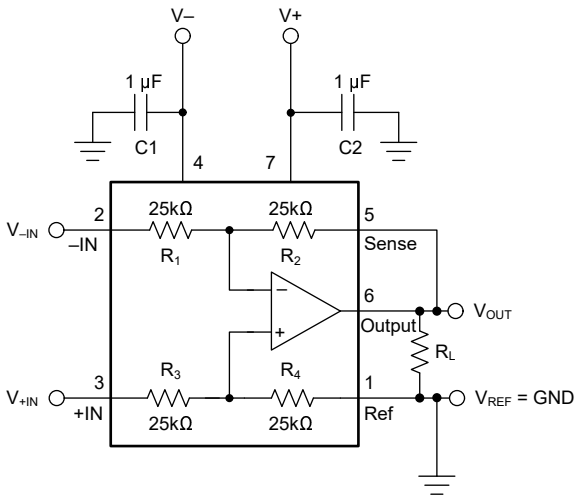

Figure 7-30. Example Schematic

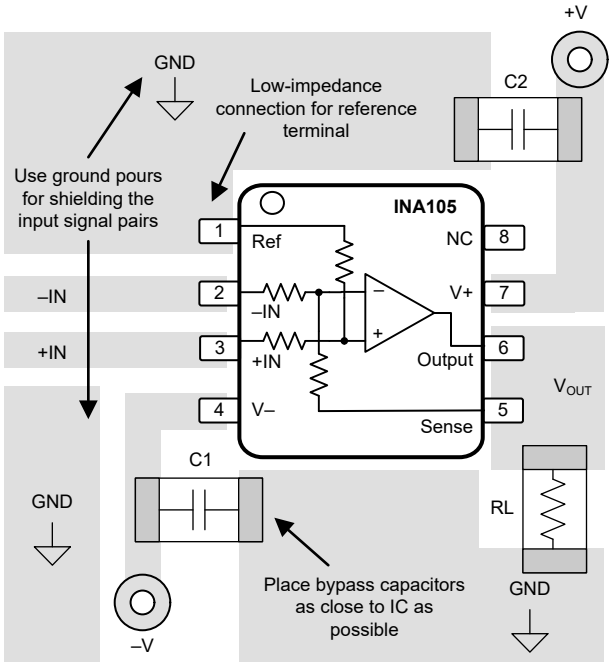

Figure 7-31. Associated PCB Layout for SOIC and PDIP Packages

8 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

8.1 Device Support

8.1.1 Device Nomenclature

Table 8-1. Device Nomenclature

Part Number	Definition
INA105KP INA105KU/2K5	The die is manufactured in CSO: SHE or CSO: RFB.
INA105AM INA105BM	The die is manufactured in CSO: SHE.

8.1.2 Development Support

For development support on this product, see the following:

8.1.2.1 PSpice® for TI

PSpice® for TI is a design and simulation environment that helps evaluate performance of analog circuits. Create subsystem designs and prototype solutions before committing to layout and fabrication, reducing development cost and time to market.

8.1.2.2 TINA-TI™ (Free Software Download)

TINA™ is a simple, powerful, and easy-to-use circuit simulation program based on a SPICE engine. TINA-TI is a free, fully-functional version of the TINA software, preloaded with a library of macro models in addition to a range of both passive and active models. TINA-TI provides all the conventional dc, transient, and frequency domain analysis of SPICE, as well as additional design capabilities.

Available as a free download from the Analog eLab Design Center, TINA-TI offers extensive post-processing capability that allows users to format results in a variety of ways. Virtual instruments offer the ability to select input waveforms and probe circuit nodes, voltages, and waveforms, creating a dynamic quick-start tool.

Note

These files require that either the TINA software (from DesignSoft™) or TINA-TI software be installed. Download the free TINA-TI software from the TINA-TI folder.

8.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

8.3 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

8.4 Trademarks

TINA-TI™ and TI E2E™ are trademarks of Texas Instruments.
TINA™ and DesignSoft™ are trademarks of DesignSoft, Inc.
PSpice® is a registered trademark of Cadence Design Systems, Inc.

8.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

8.6 Glossary

TI Glossary — This glossary lists and explains terms, acronyms, and definitions.

9 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (March 2025) to Revision B (December 2025)	Page
• Added description of device flow information in *Specifications*	4
• Added nominal value to Supply voltage in the *Recommended Operating Conditions*	4
• Added all chip site origins (CSO) condition to the typical test conditions in the *Electrical Characteristics*	5
• Merged INA105AM and INA105BM for Offset Voltage in *Electrical Characteristics*	5
• Added gain clarification in footnote (1) in the *Electrical Characteristics*	5
• Added different fabrication process specifications for voltage noise in the *Electrical Characteristics*	5
• Merged INA105AM and INA105BM for Gain Error in *Electrical Characteristics*	5
• Added different fabrication process specifications for short circuit current, sinking and sourcing, in the *Electrical Characteristics*	5
• Added different fabrication process specifications for slew rate in the *Electrical Characteristics*	5
• Added all chip site origins (CSO) condition to the typical test conditions in the *Typical Characteristics*	7
• Added "CSO: SHE" to Step Response, Maximum V_{OUT} vs. I_{OUT} (Negative Swing), and Maximum V_{OUT} vs. I_{OUT} (Positive Swing) curves in the *Typical Characteristics*	7
• Added Step Response, Maximum V_{OUT} vs. I_{OUT} (Negative Swing), and Maximum V_{OUT} vs. I_{OUT} (Positive Swing) curves for CSO: RFB in the *Typical Characteristics*	7
• Changed and added INA105 Internal Schematic for each fabrication process in the *Functional Block Diagram*	9
• Added Part Number flow information table to the *Device Nomenclature*	26

Changes from Revision * (August 1993) to Revision A (March 2025)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document	1
• Added the *Pin Configuration and Functions*, *Specifications*,*Recommended Operating Conditions*, *Thermal Information*, *Detailed Description*, *Overview*, *Functional Block Diagram*, *Feature Description*, *Device Functional Modes*, *Application and Implementation*, , *Power Supply Recommendations*, *Layout*, *Layout Guidelines*, *Layout Example*, *Device and Documentation Support*, and *Mechanical, Packaging, and Orderable Information* sections	1
• Added test conditions throughout *Electrical Characteristics* table	5
• Changed *Offset Voltage vs Time* to *Long-term stability* in *Electrical Characteristics*	5
• Changed *Current limit* to *Short-circuit current* for sinking and sourcing scenario	5
• Moved *Power Supply Voltage Range* and Temperature Range from *Electrical Characteristics* to *Recommended Operating Conditions* and *Absolute Maximum Ratings* table	5

10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

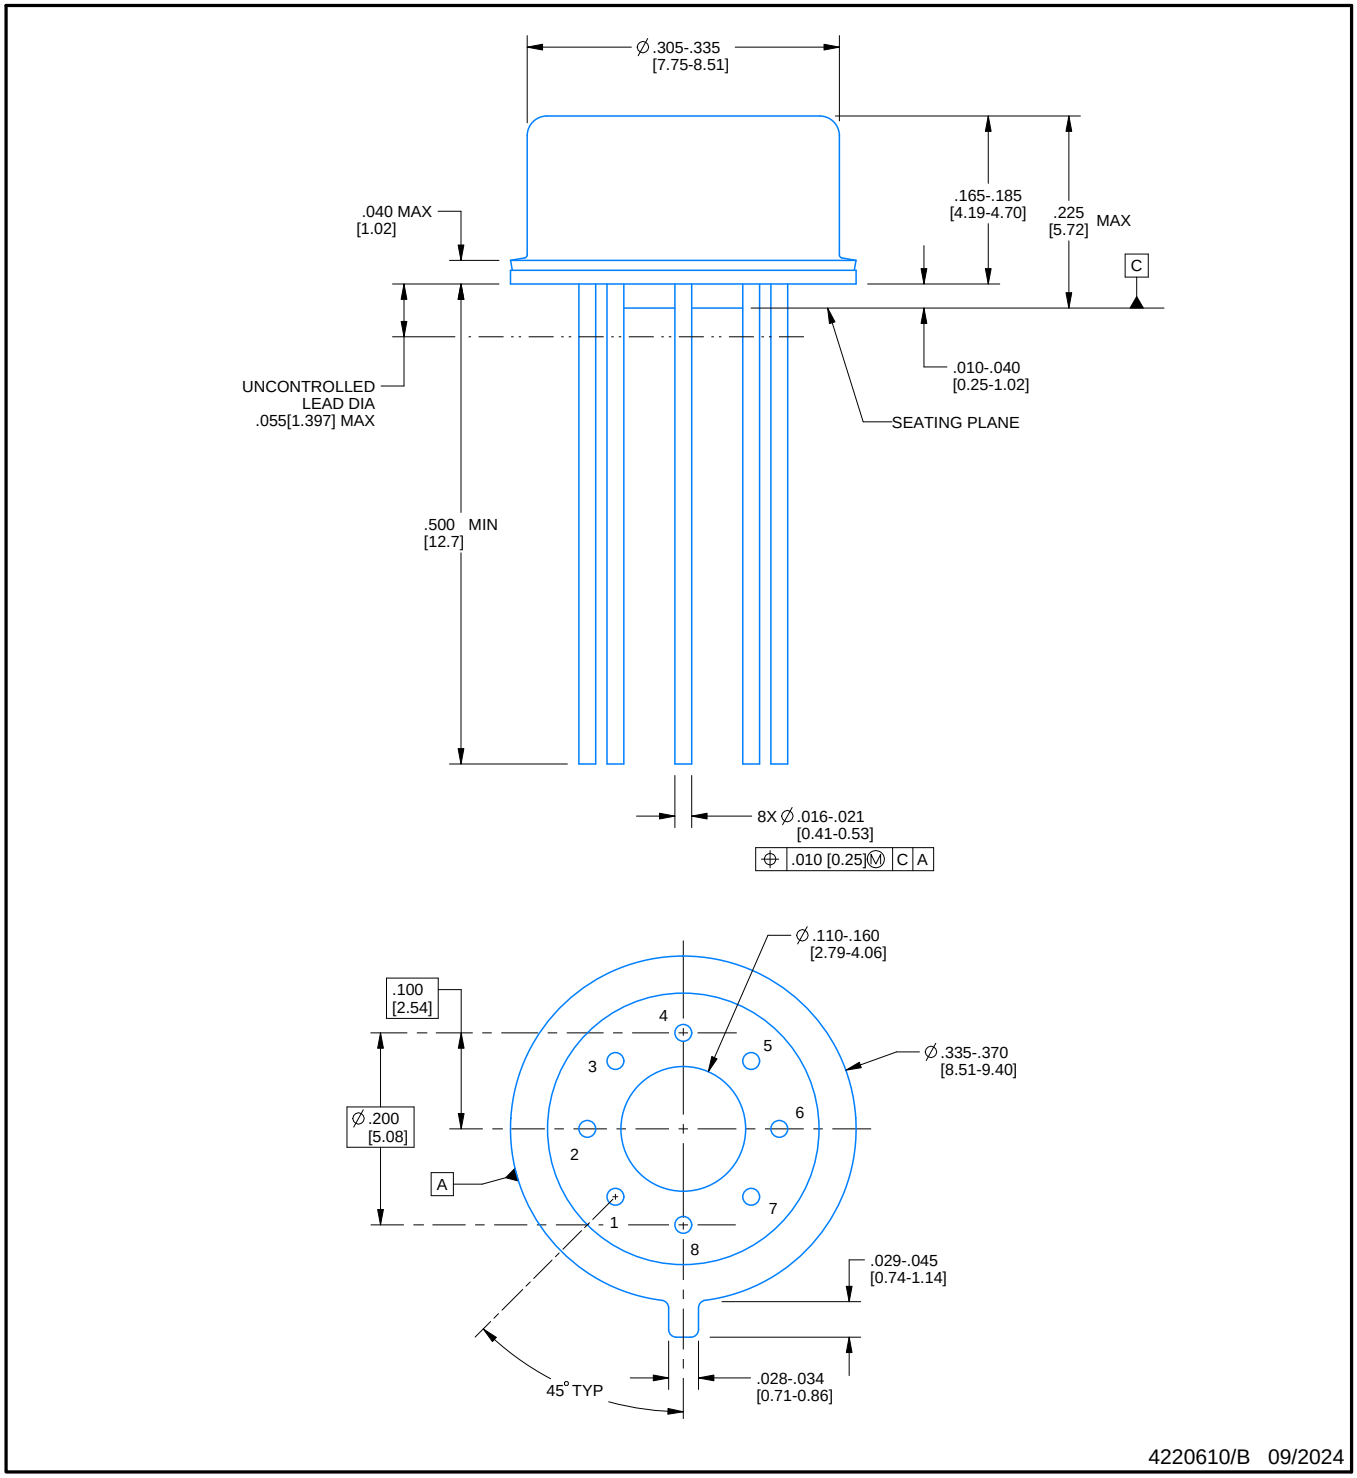
PACKAGE OUTLINE

LMC0008A

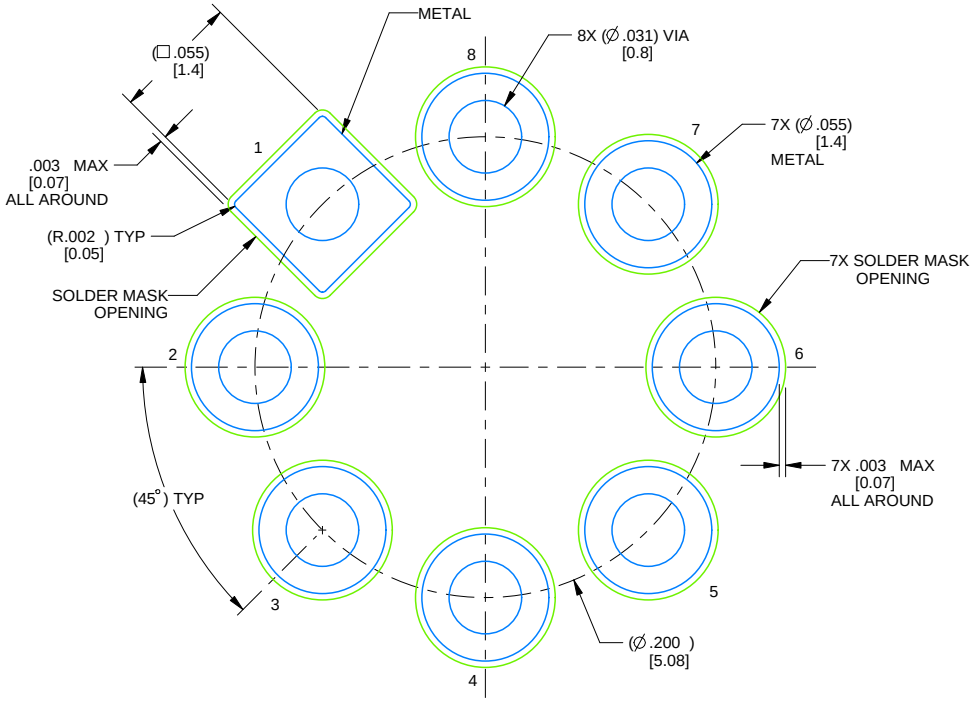
TO-CAN - 5.72 mm max height

TRANSISTOR OUTLINE



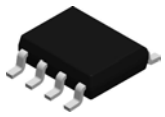
NOTES:

1. All linear dimensions are in inches [millimeters]. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Pin numbers shown for reference only. Numbers may not be marked on package.
4. Reference JEDEC registration MO-002/TO-99.



LAND PATTERN EXAMPLE
NON-SOLDER MASK DEFINED
SCALE: 12X

4220610/B 09/2024

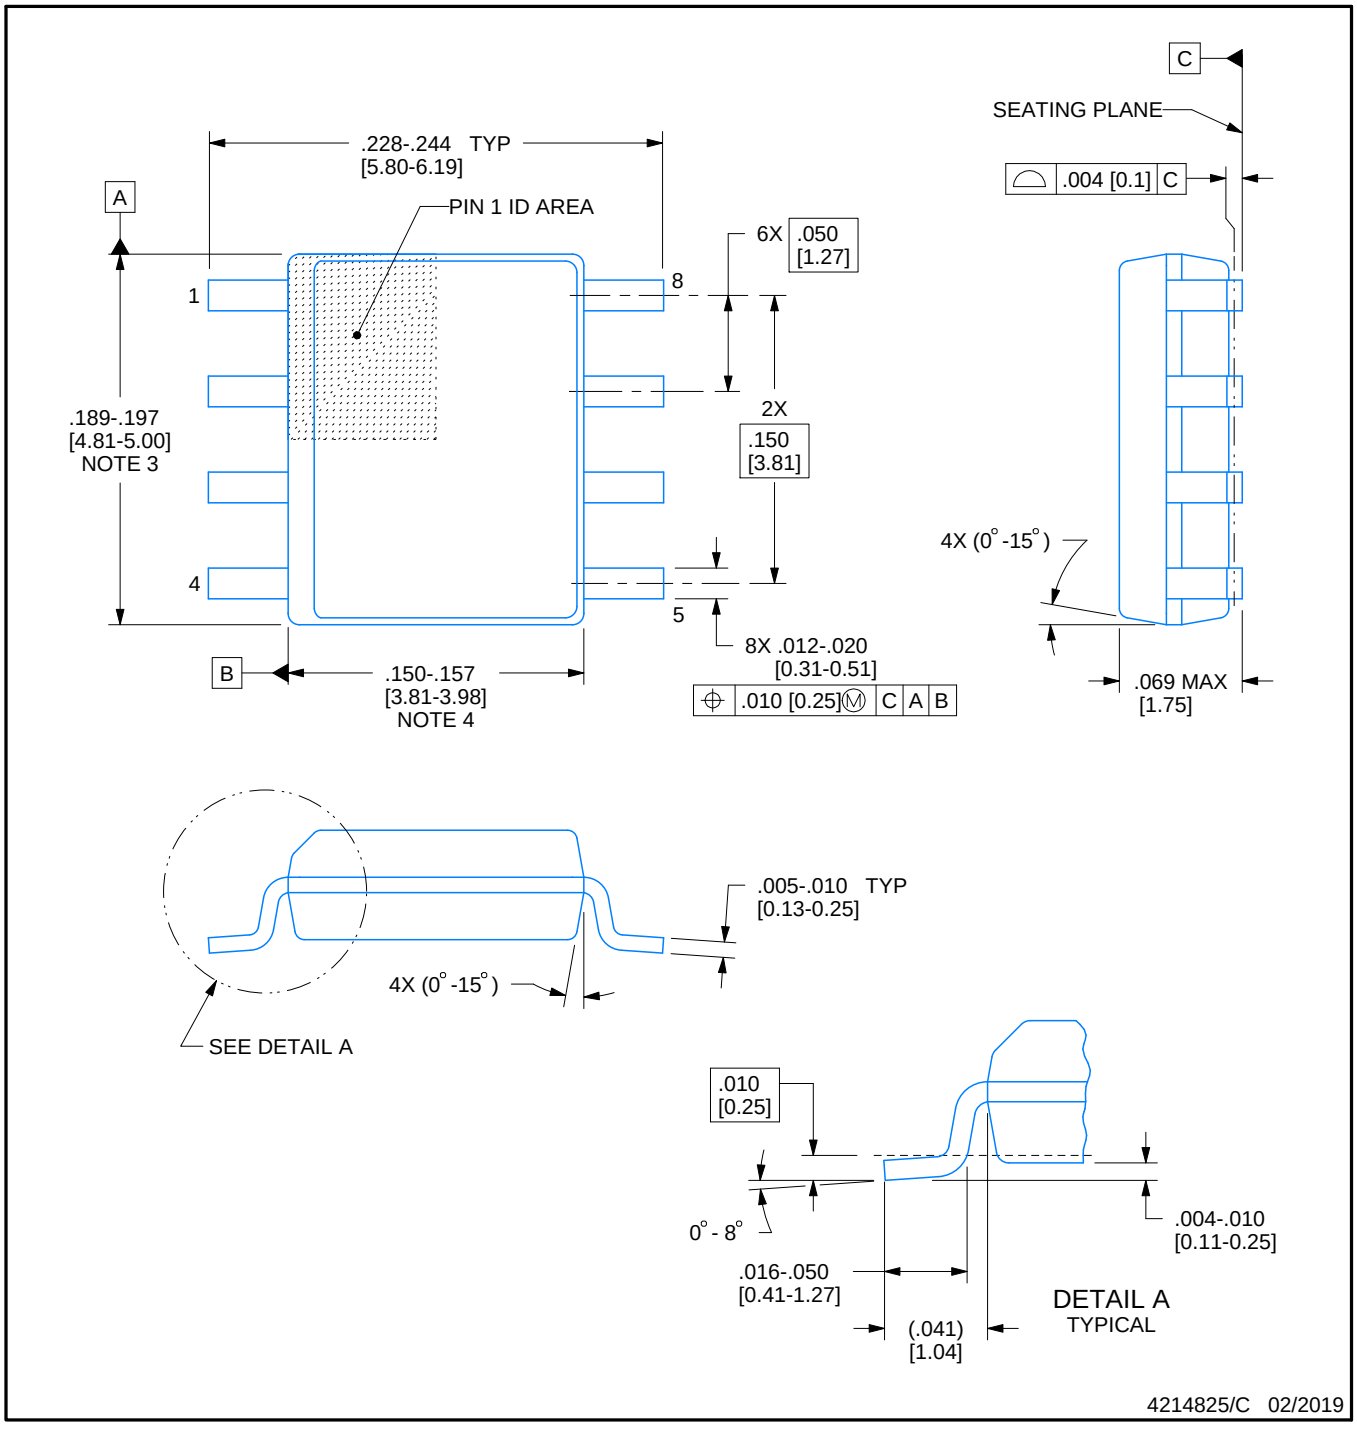


PACKAGE OUTLINE

D0008A

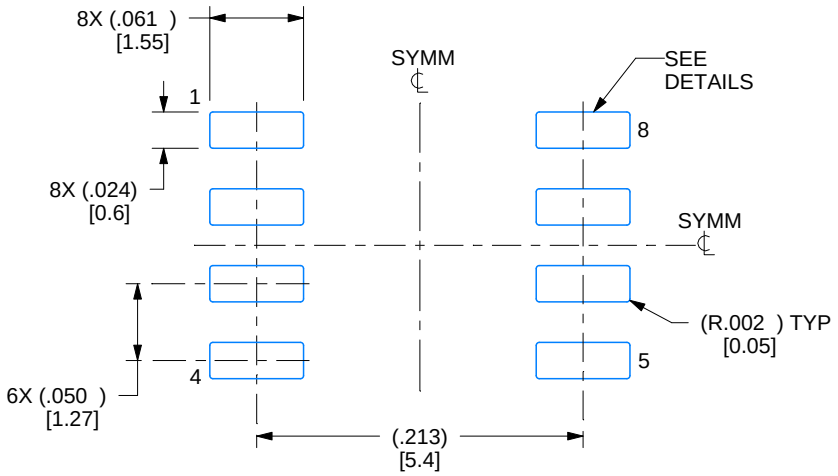
SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

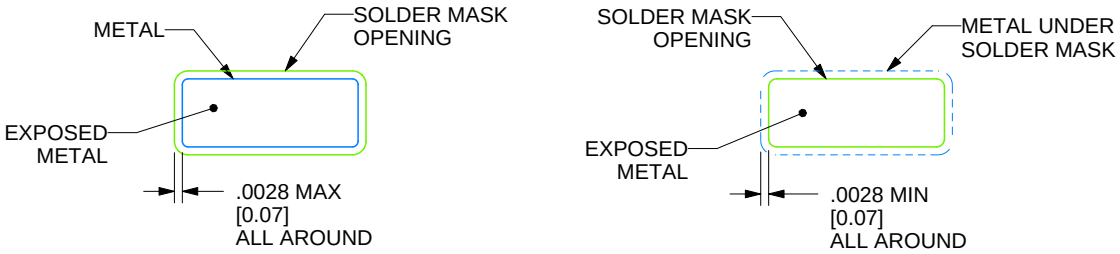


NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.



LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:8X



SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

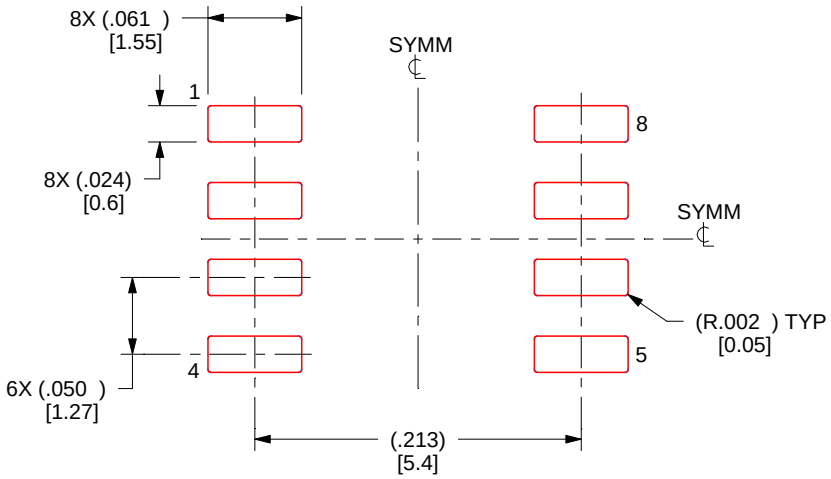
6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT



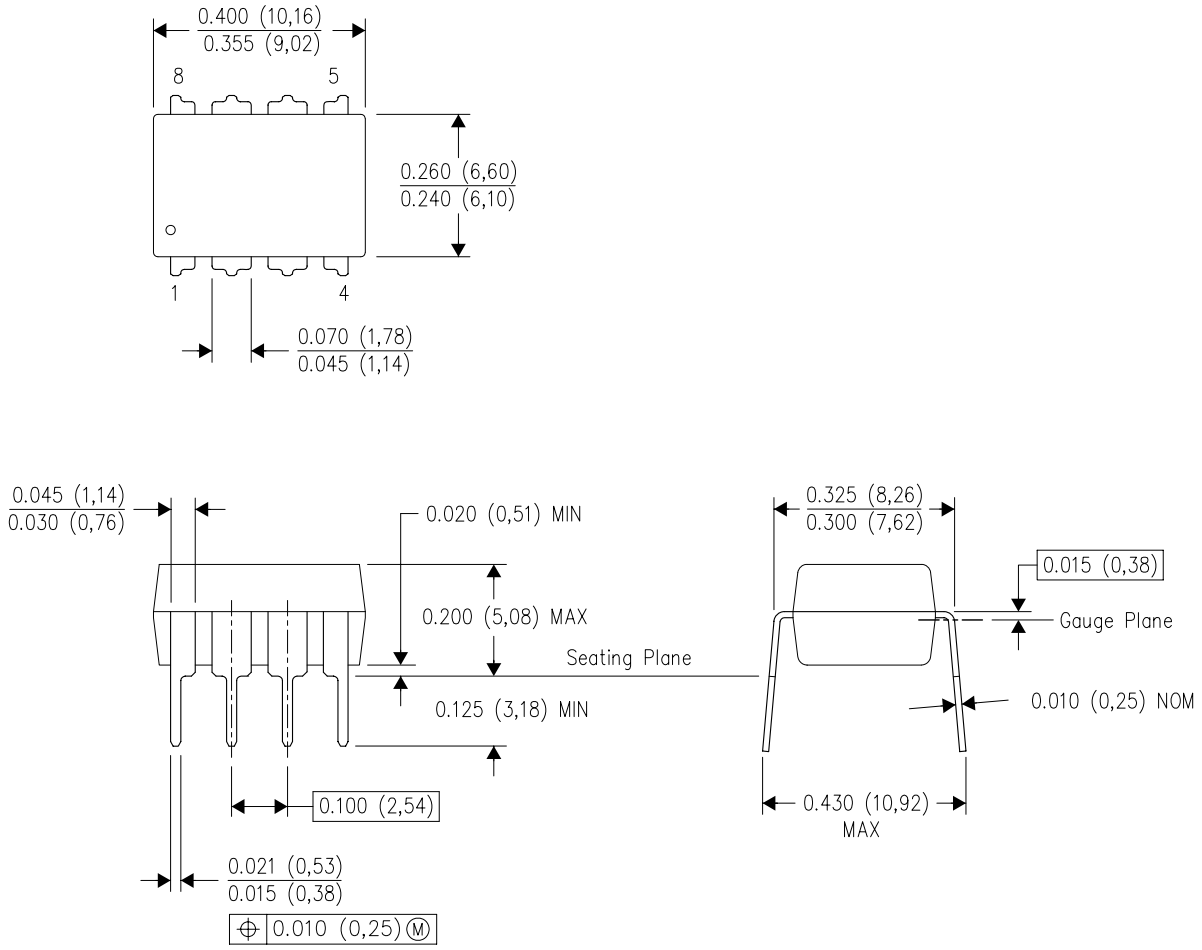
SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.125 MM] THICK STENCIL
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

P (R–PDIP–T8) PLASTIC DUAL–IN–LINE PACKAGE



NOTES:
A. All linear dimensions are in inches (millimeters).
B. This drawing is subject to change without notice.
C. Falls within JEDEC MS–001 variation BA.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI’s products are provided subject to TI’s Terms of Sale, TI’s General Quality Guidelines, or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI’s provision of these resources does not expand or otherwise alter TI’s applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
