DL PACKAGE

(TOP VIEW)

- Nine Single-Ended SCSI Transceiver Channels With Active Termination
- Programmable Drivers Provide Active Negation (Totem Pole) or Wired-OR (Open Drain) Outputs
- 24-mA Current-Mode Active Termination With Common Nine-Channel Bus Enable
- Low Output Capacitance Presented to SCSI Bus, 13.5 pF Typ
- 3.3 V Compatible Logic Inputs Provide Bridge from 3 V Controllers to 5 V SCSI Bus
- Designed to Operate at 10-Million Data Transfers Per Second (Fast-SCSI)
- Controlled Driver Rise and Fall Times
 5 ns Min
- High-Receiver Input-Voltage Hysteresis
 500 mV Typ
- Receiver Input-Noise Pulse Filter
 5 ns Typ
- Each Driver and Receiver Meets ANSI X3.131-1994 (SCSI-2) and the Proposed SCSI-3 Standards
- Power-Up/Power-Down Glitch Protection
- High Impedance Driver With V_{CC} at 0 V

description

The SN75LBC968 is a nine-channel transceiver with active termination that drives and receives the signals from the single-ended, parallel data buses such as the Small Computer-Systems

56∏ GND [8B 55 GND TE [2 54 CE GND 3 53 ¶ NC 1A l 1DE/RE 5 52 ∏ NC 2A 51 NC 6 2DE/RE 50**∏** 7B 49 NC 3A l 8 48**∏** 6B 3DE/RE 9 4A [10 47 ¶ NC 4DE/RE [11 46 🛮 5B 45 V_{CC} 12 V_{CC1} L GND **1** 13 44 ∏ GND GND [] 14 43 GND 15 42 GND GND [41 GND GND [] 16 GND [] 17 40 GND 18 39 [] V_{CC} Vcc [19 38**∏** NC 5A 37**∏** 4B 20 5DE/RE 21 36 ∏ NC 6A 35**∏** 3B 22 6DE/RE 23 34 ∏ NC 7A 24 33 7DE/RE П 2В 25 32] NC A8 26 8DE/RE

Interface (SCSI) bus. The features of the line drivers, receivers, and active-termination circuits provide the optimum signal-to-noise ratios for reliable data transmission. Integration of the termination and transceivers in the LinBiCMOS™ process provides the necessary analog-circuit performance, has low quiescent power, and reduces the capacitance presented to the bus over separate termination and I/O circuits.

The transceivers of the SN75LBC968 can be enabled to function as totem-pole or open-drain outputs. The open-drain mode drives the wired-OR lines of SCSI (BSY, SEL, and RST) by inputting the data to the direction control input DE/RE instead of the A input. When driving the data through the A input, the outputs become totem poles and provide active signal negation for a higher voltage level on low-to-high signal transitions on heavily loaded buses. In either mode, the turnon and turnoff output transition times are limited to minimize crosstalk through capacitive coupling to adjacent lines and RF emissions from the cable. The receivers are also designed for optimum analog performance by precisely controlling the input-voltage thresholds, providing wide input-voltage hysteresis and including an input-noise filter. These features significantly increase the likelihood of detecting only the desired data signal and rejecting noise.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

LinBiCMOS is a trademark of Texas Instruments Incorporated.

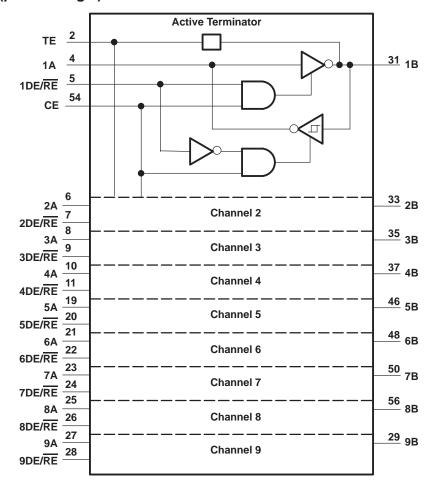

description (continued)

The communication between the SN75LBC968 and the controller can be accomplished at 3.3-V logic levels provided that the $V_{\rm CC1}$ input connects to the same supply rail as the controller. This provides a bridge from the lower-voltage circuit and the 5-V SCSI bus. The SN75LBC968 also removes the need for special I/O buffers (and associated power dissipation) on the controller itself. The SN75LBC968 must be used with a SCSI controller with support for Differential SCSI.

The integrated, current-mode, active termination supplies a constant 24 mA of current (TERMPWR) to the bus when the bus voltage falls below 2.5 V. This makes the next low-to-high (negation) signal transition independent of the low-level (asserted) bus voltage, unlike voltage-mode terminators. The termination current is provided through the TE input and from TERMPWR and can be disabled by letting the TE input float or by connecting it to ground. The termination circuitry is independent from the line drivers and receivers and V_{CC} or V_{CC1} . Operational termination is present as long as TERMPWR is applied.

The switching speeds of the SN75LBC968 are sufficient to transfer data over the data bus at ten million transfers per second (Fast-SCSI). The specification, $t_{sk(lim)}$, is for system skew budgeting and maintenance of bus set-up and hold times. The device is available in the space-efficient shrink-small-outline package (SSOP) with 25-mil lead pitch. The SN75LBC968 meets or exceeds the requirements of ANSI X3.131–1994 (SCSI-2) and the proposed SPI (SCSI-3) standards, and is characterized for operation from 0°C to 70°C.

schematics

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V _{CC} , V _{CC1} , V _{TE} (see Note 1)	0.5 V to 7 V
Input voltage range, V _I (A-side)	$V_{CC1} + 0.3 V$
Bus voltage range (B-side)	0.5 V to 7 V
Data I/O and control (A-side) voltage range	$-0.5\ V$ to 7 V
Continuous power dissipation (see Note 2)	Internally Limited
Operating free-air temperature range, T _A	0°C to 70°C
Storage temperature range, T _{stq}	65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values are with respect to GND.

^{2.} The maximum operating-junction temperature is internally limited. Use the dissipation rating table to operate below this temperature.

DISSIPATION RATING TABLE

PACKAG	T _A ≤ 25°C POWER RATING	DERATING FACTOR† ABOVE T _A = 25°C	T _A = 70°C POWER RATING
DL	2500 mW	20 mW/°C	1600 mW

[†]Derating factors are the inverse of the junction-to-ambient thermal resistance when board-mounted with no air flow.

recommended operating conditions

	MIN	NOM	MAX	UNIT	
Supply voltage, V _{CC}				5.25	V
Supply voltage, V _{CC1} (see Note 3)				5.25	V

⁽¹⁾ Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

⁽²⁾ Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

⁽⁴⁾ Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

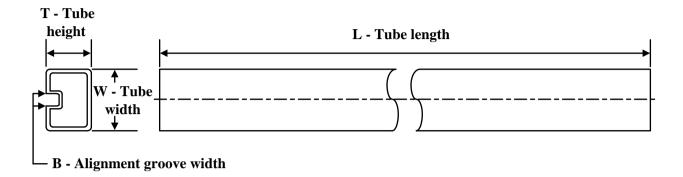

⁽⁵⁾ MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.
