

TL08xx FET-Input Operational Amplifiers

1 Features

- High slew rate: 20V/μs (TL08xH, typ)
- Low offset voltage: 1mV (TL08xH, typ)
- Low offset voltage drift: 2μV/°C
- Low power consumption: 940μA/ch (TL08xH, typ)
- Wide common-mode and differential voltage ranges
 - Common-mode input voltage range includes V_{CC+}
- Low input bias and offset currents
- Low noise:
 - $V_n = 37\text{nV}/\sqrt{\text{Hz}}$ (typ) at f = 1kHz
- Output short-circuit protection
- Low total harmonic distortion: 0.003% (typ)
- Wide supply voltage:
 - ±2.25V to ±20V, 4.5V to 40V

2 Applications

- [Solar energy: string and central inverter](#)
- [Motor drives: AC and servo drive control and power stage modules](#)
- [Single phase online UPS](#)
- [Three phase UPS](#)
- [Pro audio mixers](#)
- [Battery test equipment](#)

3 Description

The TL08xH (TL081H, TL082H, and TL084H) family of devices are the next-generation versions of the industry-standard TL08x (TL081, TL082, and TL084) devices. These devices provide outstanding value for cost-sensitive applications, with features including low offset (1mV, typical), high slew rate (20V/μs), and common-mode input to the positive supply. High ESD (1.5kV, HBM), integrated EMI and RF filters, and operation across the full –40°C to 125°C enable the TL08xH devices to be used in the most rugged and demanding applications.

Device Information

| PART NUMBER | CHANNEL COUNT | PACKAGE ⁽¹⁾ |
|-------------|---------------|------------------------|
| TL081x | Single | P (PDIP, 8) |
| | | DCK (SC70, 5) |
| | | PS (SO, 8) |
| | | D (SOIC, 8) |
| | | DBV (SOT-23, 5) |
| TL082x | Dual | P (PDIP, 8) |
| | | PS (SO, 8) |
| | | D (SOIC, 8) |
| | | DDF (SOT-23, 8) |
| | | PW (TSSOP, 8) |
| TL082M | Dual | JG (CDIP, 8) |
| | | FK (LCCC, 20) |
| TL084x | Quad | N (PDIP, 14) |
| | | D (SOIC, 14) |
| | | DYY (SOT-23, 14) |
| | | PW (TSSOP, 14) |
| TL084M | Quad | J (CDIP, 14) |
| | | FK (LCCC, 20) |

5 Specifications

5.1 Absolute Maximum Ratings

over operating ambient temperature range (unless otherwise noted) ⁽¹⁾

| | | | MIN | MAX | UNIT |
|--|--|---|--------------|--------------|------|
| Supply voltage, $V_S = (V+) - (V-)$ | All NS and PS packages; All TL08xM devices | | -0.3 | 36 | V |
| | All other devices | | 0 | 42 | V |
| Signal input pins | Common-mode voltage ⁽³⁾ | All NS and PS packages; All TL08xM devices | $(V-) - 0.3$ | $(V-) + 36$ | V |
| | | All other devices | $(V-) - 0.5$ | $(V+) + 0.5$ | V |
| | Differential voltage ⁽³⁾ | All NS and PS packages; All TL08xM devices ⁽⁴⁾ | $(V-) - 0.3$ | $(V-) + 36$ | V |
| | | All other devices | | $V_S + 0.2$ | V |
| Current ⁽³⁾ | All NS and PS packages; All TL07xM devices | | 50 | mA | |
| | All other devices | | -10 | 10 | mA |
| Output short-circuit ⁽²⁾ | | | Continuous | | |
| Operating ambient temperature, T_A | | | -55 | 150 | °C |
| Junction temperature, T_J | | | | 150 | °C |
| Case temperature for 60 seconds - FK package | | | | 260 | °C |
| Lead temperature 1.8 mm (1/16 inch) from case for 10 seconds | | | | 300 | °C |
| Storage temperature, T_{stg} | | | -65 | 150 | °C |

- Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- Short-circuit to ground, one amplifier per package.
- Input pins are diode-clamped to the power-supply rails. Input signals that may swing more than 0.5 V beyond the supply rails must be current limited to 10 mA or less.
- Differential voltage only limited by input voltage.

5.2 ESD Ratings

| | | | VALUE | UNIT |
|-------------|-------------------------|--|-------|------|
| $V_{(ESD)}$ | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | ±1500 | V |
| | | Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾ | ±1000 | |

- JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

over operating ambient temperature range (unless otherwise noted)

| | | | MIN | MAX | UNIT |
|-------|---|---|-----------------|-------------------|------|
| V_S | Supply voltage, $(V_{CC+}) - (V_{CC-})$ | All NS and PS packages; All TL08xM devices ⁽¹⁾ | 10 | 30 | V |
| | | All other devices | 4.5 | 40 | V |
| V_I | Input voltage range | All NS and PS packages; All TL08xM devices | $(V_{CC-}) + 2$ | $(V_{CC+}) + 0.1$ | V |
| | | All other devices | $(V_{CC-}) + 4$ | $(V_{CC+}) + 0.1$ | V |
| T_A | Specified temperature | TL08xM | -55 | 125 | °C |
| | | TL08xH | -40 | 125 | °C |
| | | TL08xI | -40 | 85 | °C |
| | | TL08xC | 0 | 70 | °C |

- $V+$ and $V-$ are not required to be of equal magnitude, provided that the total $V_S (V+ - V-)$ is between 10 V and 30 V.

5.4 Thermal Information for Single Channel

| THERMAL METRIC ⁽¹⁾ | | TL081xx | | | | | UNIT |
|-------------------------------|--|----------|------------|--------------|----------|---------|------|
| | | D (SOIC) | DCK (SC70) | DBV (SOT-23) | P (PDIP) | PS (SO) | |
| | | 8 PINS | 5 PINS | 5 PINS | 8 PINS | 8 PINS | |
| R _{θJA} | Junction-to-ambient thermal resistance | 158.8 | 217.5 | 212.2 | 85 | 95 | °C/W |
| R _{θJC(top)} | Junction-to-case (top) thermal resistance | 98.6 | 113.1 | 111.1 | – | – | °C/W |
| R _{θJB} | Junction-to-board thermal resistance | 102.3 | 63.8 | 79.4 | – | – | °C/W |
| ψ _{JT} | Junction-to-top characterization parameter | 45.8 | 34.8 | 51.8 | – | – | °C/W |
| ψ _{JB} | Junction-to-board characterization parameter | 101.5 | 63.5 | 79.0 | – | – | °C/W |
| R _{θJC(bot)} | Junction-to-case (bottom) thermal resistance | N/A | N/A | N/A | N/A | N/A | °C/W |

(1) For information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metric](#) application report.

5.5 Thermal Information for Dual Channel

| THERMAL METRIC ⁽¹⁾ | | TL082xx | | | | | | | | UNIT |
|-------------------------------|--|----------|--------------|-----------|-----------|----------|---------|------------|---------|------|
| | | D (SOIC) | DDF (SOT-23) | FK (LCCC) | JG (CDIP) | P (PDIP) | PS (SO) | PW (TSSOP) | U (CFP) | |
| | | 8 PINS | 8 PINS | 20 PINS | 8 PINS | 8 PINS | 8 PINS | 8 PINS | 10 PINS | |
| R _{θJA} | Junction-to-ambient thermal resistance | 147.8 | 181.5 | – | – | 85 | 95 | 200.3 | 169.8 | °C/W |
| R _{θJC(top)} | Junction-to-case (top) thermal resistance | 88.2 | 112.5 | 5.61 | 15.05 | – | – | 89.4 | 62.1 | °C/W |
| R _{θJB} | Junction-to-board thermal resistance | 91.4 | 98.2 | – | – | – | – | 131.0 | 176.2 | °C/W |
| ψ _{JT} | Junction-to-top characterization parameter | 36.8 | 17.2 | – | – | – | – | 22.2 | 48.4 | °C/W |
| ψ _{JB} | Junction-to-board characterization parameter | 90.6 | 97.6 | – | – | – | – | 129.3 | 144.1 | °C/W |
| R _{θJC(bot)} | Junction-to-case (bottom) thermal resistance | N/A | N/A | – | – | – | – | N/A | 5.4 | °C/W |

(1) For information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metric](#) application report.

5.6 Thermal Information for Quad Channel

| THERMAL METRIC ⁽¹⁾ | | TL084xx | | | | | | | | UNIT |
|-------------------------------|--|-------------|-----------------|---------------|--------------|--------------|---------------|---------------|--------------|------|
| | | D (SOIC) | DYY (SOT-23) | FK (TSSOP) | J (TSSOP) | N (TSSOP) | NS (TSSOP) | PW (TSSOP) | W (TSSOP) | |
| | | 14 PINS | 14 PINS | 20 PINS | 14 PINS | 14 PINS | 14 PINS | 14 PINS | 14 PINS | |
| R _{θJA} | Junction-to-ambient thermal resistance | 114.2 | 153.2 | – | – | 80 | 76 | – | 128.8 | °C/W |
| R _{θJC(top)} | Junction-to-case (top) thermal resistance | 70.3 | 88.7 | 5.61 | 14.5 | – | – | 14.5 | 56.1 | °C/W |
| R _{θJB} | Junction-to-board thermal resistance | 70.2 | 65.4 | – | – | – | – | – | 127.6 | °C/W |
| ψ _{JT} | Junction-to-top characterization parameter | 28.8 | 9.5 | – | – | – | – | – | 29 | °C/W |
| ψ _{JB} | Junction-to-board characterization parameter | 69.8 | 65.0 | – | – | – | – | – | 106.1 | °C/W |
| R _{θJC(bot)} | Junction-to-case (bottom) thermal resistance | N/A | N/A | – | – | – | – | – | 0.5 | °C/W |

(1) For information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metric](#) application report.

5.7 Electrical Characteristics: TL08xH

For $V_S = (V_{CC+}) - (V_{CC-}) = 4.5\text{ V to }40\text{ V}$ ($\pm 2.25\text{ V to } \pm 20\text{ V}$) at $T_A = 25^\circ\text{C}$, $R_L = 10\text{ k}\Omega$ connected to $V_S / 2$, $V_{CM} = V_S / 2$, and $V_{out} = V_S / 2$, unless otherwise noted.

| PARAMETER | | TEST CONDITIONS | | MIN | TYP | MAX | UNIT |
|----------------------------|--|--|--|-------------------|-------------------|-------------|--------------------------------------|
| OFFSET VOLTAGE | | | | | | | |
| V_{OS} | Input offset voltage | | | | ± 1 | ± 4 | mV |

7 Detailed Description

7.1 Overview

The TL08xH family (TL081H, TL082H, and TL084H) is the next-generation family of the industry standard TL08x (TL081, TL082, and TL084) high-voltage general purpose amplifiers. These devices provide outstanding value for cost-sensitive applications requiring high slew rate with high voltage signals, such as motor drive and inverter systems.

A robust MUX-friendly input stage enhances flexibility in design, with common-mode voltage range extending to the positive rail as well as improved settling time in multi-channel applications. Low offset voltage (1mV, typ) and low offset voltage drift ($2\mu\text{V}/^\circ\text{C}$) allows the TL08xH family to be used in rugged applications requiring precision current and voltage sensing. High voltage operation (up to 40V) and high slew rate ($20\text{V}/\mu\text{s}$) make the TL08xH family a premier choice for high-voltage applications with fast transients.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Total Harmonic Distortion

Electronic components within a circuit generate harmonic distortion in the audio signal. Total harmonic distortion (THD) is a measure of harmonic distortions accumulated by a signal in an audio system. These devices have a very low THD of 0.003% meaning that the TL08x devices generate little harmonic distortion when used in audio signal applications.

7.3.2 Slew Rate

The slew rate is the rate at which an operational amplifier changes the output when there is a change on the input. These devices have a $20\text{V}/\mu\text{s}$ slew rate.

7.4 Device Functional Modes

These devices are powered on when the supply is connected. This device operates as a single-supply operational amplifier or dual-supply amplifier depending on the application.

8 Applications and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

The TL08x series of operational amplifiers can be used in countless applications. The few applications in this section show principles used in all applications of these parts.

8.2 Typical Applications

8.2.1 Inverting Amplifier Application

A typical application for an operational amplifier is an inverting amplifier. This amplifier takes a positive voltage on the input, and makes positive voltage as a negative voltage of the same magnitude. In the same manner, amplifier also makes negative voltages positive.

Figure 8-1. Schematic for Inverting Amplifier Application

8.2.1.1 Design Requirements

Choose the supply voltage higher than input and output ranges. For instance, this application scales a signal of $\pm 0.5V$ to $\pm 1.8V$. Setting the supply at $\pm 12V$ is sufficient to accommodate this application.

8.2.1.2 Detailed Design Procedure

Determine the gain required by the inverting amplifier:

$$A_V = \frac{V_{OUT}}{V_{IN}} \quad (1)$$

$$A_V = \frac{1.8}{-0.5} = -3.6 \quad (2)$$

After the desired gain is determined, choose a value for R_I or R_F . Choosing a value in the $k\Omega$ range is desirable because the amplifier circuit uses currents in the milliamperere range. This example chooses $10k\Omega$ for R_I , which means that $36k\Omega$ is used for R_F . R_F value is determined by [Equation 3](#).

$$A_V = -\frac{R_F}{R_I} \quad (3)$$

8.2.1.3 Application Curve

Figure 8-2. Input and Output Voltages of the Inverting Amplifier

8.3 Power Supply Recommendations

CAUTION

Supply voltages larger than 36V for a single-supply or outside the range of $\pm 18\text{V}$ for a dual-supply can permanently damage the device (see [Section 5.1](#)).

Place $0.1\mu\text{F}$ bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high impedance power supplies. For more detailed information on bypass capacitor placement, see [Section 8.4](#).

8.4 Layout

8.4.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low impedance power sources local to the analog circuitry.
 - Connect low-ESR, $0.1\mu\text{F}$ ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from $V+$ to ground is applicable for single-supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCB are typically devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Keep digital and analog grounds physically separate, and pay attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If not possible to keep them separate, cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping RF and RG close to the inverting input minimizes parasitic capacitance, as shown in [Section 8.4.2](#).
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring significantly helps reduce leakage currents from nearby traces that are at different potentials.

8.4.2 Layout Examples

Figure 8-4. Operational Amplifier Schematic for Non-inverting Configuration

9 Device and Documentation Support

9.1 Device Support

9.1.1 Device Nomenclature

Table 9-1. Device Nomenclature

| PART NUMBER | DEFINITION |
|--------------|--|
| TL08xyzzzzzz | x is the channel count |
| | If y = H, the die is manufactured on the latest flow (CSO: RFB). Section 5.7 and Section 5.10 describe the performance of the new die. |
| | If y ≠ H and y ≠ M, the die is manufactured on the legacy flow (CSO: SFAB) or the latest flow (CSO: RFB). Section 5.8 and Section 5.9 describe the performance of the original die. |
| | If y = M, the device is specified for the extended temperature range of –55°C to +125°C. The die is manufactured on the legacy flow (CSO:SFAB). The letters and numbers represented by z are grade-out and package options described in Section 5.8 and the <i>Package Option Addendum</i> at the end of this data sheet. |

9.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

9.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
 All trademarks are the property of their respective owners.

9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

| Changes from Revision N (June 2024) to Revision O (September 2025) | Page |
|---|------|
| • Changed $V_n = 18nV/\sqrt{Hz}$ to $V_n = 37nV/\sqrt{Hz}$ in <i>Features</i> | 1 |
| • Updated <i>Device Information</i> table..... | 1 |
| • Changed TL081 to TL081 SOIC only in figure1 and TL081 (Each Amplifier) in figure2 of <i>Logic Symbols</i> | 1 |
| • Updated pin name from V– to VCC– and V+ to VCC+ in Figure 4-1 and Figure 4-2..... | 3 |
| • Updated caption for Figure 4-3..... | 3 |
| • Updated caption for Figure 4-4..... | 3 |

| | |
|--|----|
| • Changed TL081x to TL081C in Table 4-2..... | 3 |
| • Updated HBM value from 2000V to 1500V..... | 9 |
| • Deleted plots for <i>THD+N Ratio vs Frequency</i> , <i>THD+N vs Output Amplitude</i> , and <i>CMRR and PSRR vs Frequency</i> | 17 |
| • Added "(for SO Package Only)" to Figure 6-4, <i>Test Figure 4</i> | 23 |
| • Deleted <i>System Examples</i> section..... | 26 |
| • Updated 2nd bullet in <i>Layout Guidelines</i> | 26 |
| • Added <i>Device Nomenclature</i> table..... | 28 |

Changes from Revision M (December 2021) to Revision N (June 2024) Page

| | |
|--|----|
| • Changed Absolute Maximum Ratings, ESD Ratings, Recommended Operating Conditions, and Thermal Information sections by merging TL08xH and TL08xx specifications..... | 9 |
| • Changed Electrical Characteristics tables by merging TL08xC, TL08xAC, TL08xBC, TL08xI, and TL08xM specifications..... | 14 |
| • Increased gain bandwidth of all non-NS/non-PS packages and non-TL08xM devices from 3 MHz to 5.25 MHz..... | 14 |
| • Merged TL08xC, TL08xAC, TL08xBC, TL08xI, and TL08xM Switching Characteristics tables and renamed to Electrical Characteristics (AC)..... | 16 |
| • Changed input voltage noise density at 1 kHz for all non-PS/non-NS packages and all non-TL08xM devices to 37 nV/ $\sqrt{\text{Hz}}$ | 16 |
| • Changed THD+N for all non-PS/non-NS packages and all non-TL08xM devices to 0.00012%..... | 16 |
| • Updated <i>Functional Block Diagram</i> and <i>Feature Description</i> sections..... | 24 |

Changes from Revision L (July 2021) to Revision M (December 2021) Page

| | |
|--|---|
| • Corrected DCK pinout diagram and table in <i>Pin Configurations and Functions</i> section..... | 3 |
|--|---|

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative

and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

OTHER QUALIFIED VERSIONS OF TL082, TL082M, TL084, TL084M :

- Catalog : [TL082](#), [TL084](#)
- Automotive : [TL082-Q1](#), [TL082-Q1](#)
- Military : [TL082M](#), [TL084M](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Military - QML certified for Military and Defense Applications

PACKAGE OUTLINE

JG0008A

CDIP - 5.08 mm max height

CERAMIC DUAL IN-LINE PACKAGE

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package can be hermetically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification.
5. Falls within MIL STD 1835 GDIP1-T8
